(online at: www.repository.naturalis.nl/document/548150)
(Rel. low diversity recent foraminifera assemblages in shallow marine Jakarta Bay, dominated by Pseudoratalia schroeteriana, Asterorotalia pulchella, Elphidium batavum, Operculina complanata, Quinqueloculina. Highest diversity in NW part of bay. Pseudorotia most common in muddy substrates in SE, Baculogypsinoides and miliolids mainly in NW, away from delta muds)

Hofker, J. (1978)- Biological results of the Snellius Expedition XXX. The foraminifera collected in 1929 and 1930 in the eastern part of the Indonesian Archipelago. Zool. Verhandelingen, Rijksmuseum Natuurlijke Historie Leiden 161, p. 1-69.
(online at: www.repository.naturalis.nl/document/155300)
(462 species of foraminifera from 78 sea bottom samples at depths 85- 5138m, collected by 1929-1930 Snellius Expedition to East Indonesia, and a few other shallow marine samples)

Hohenegger, J. (1994)- Distribution of living larger foraminifera NW of Sesoko-Jima, Okinawa, Japan. Marine Ecology 15, p. 291-334.
(Living larger foraminifer restricted to photic zone. Peneroplids in shallow-water from intertidal (common Peneroplis) to 40m (Dendritina, sandy substrates). Soritids subtidal, from reef moat down to 60m. Amphisorus and Marginopora common down to 3 m, Parasorites in deeper parts of reef slope. Alveolinella in upper 40m of reef slope. Amphisteginids in entire photic zone, with test flattening with increasing depth. Calcarinids cling to firm substrates. Baculogypsina restricted to high energy reef flat regions. Calcarina similar facies, extending to fore reefs down to 8m. Baculogypsinoides dominant calcarinid genus from 30-70m depth. Heterostegina prefers hard substrates on reef slope. Operculina frequent in deeper part, independent of substrates. Sandy bottoms from 30-60m inhabited by Nummulites (Operculina) venosus. Cycloclypeus restricted to fore reef areas below 50m down to base of photic zone)

Hohenegger, J. (1995)- Depth estimation by proportions of living larger foraminifera. Marine Micropaleontology 26, p. 31-47.

Hohenegger, J. (1999)- Larger foraminifera-microscopical greenhouses indicating shallow-water tropical and subtropical environments in the present and past. Kagoshima University Research Center Pacific Islands, Occasional Papers 32, p. 19-45.
(online at: http://hdl.handle.net/10232/16923)
(Larger foraminifera (2mm-15cm) characteristic of shallow marine (sub-)tropical environments, in clear, nutrition-depleted water like for coral reefs. All larger foraminifera house symbiotic microalgae and are thus

restricted to photic zone (<150m). In intertidal-shallow subtidal environments high irradiatiois blocked by thicker tests or porcelaneous structures; species living near base of photic zone facilitate light penetration by thin transparent test walls and by light-collecting mechanisms such as nodes and pillars)

Hohenegger, J. (2000)- Coenoclines of larger foraminifera. Micropaleontology 46, Suppl. 1, Advances in the biology of foraminifera, p. 127-151.
(Good review of depth distribution of modern larger foraminifera, mainly in W Pacific)

Hohenegger, J., E. Yordanova & A. Hatta (2000)- Remarks on West Pacific Nummulitidae (Foraminifera). J. Foraminiferal Research 30, p. 3-28.
(Operculina, Planostegina, Cycloclypeus and Heterostegina from W Pacific. Heterostegina depressa broad range in light intensities and is protected against irradiation by thick tests and cryptic life mode near surface. Test construction enables life under strong hydrodynamic regimes. Lives firmly attached to hard substrates, thus counteracting transportation by water movement. Nummulites venosus lives exclusively on coarse sand and avoids high sediment movement, starting distribution beneath fair weather wave base. Cycloclypeus carpenteri easily transported due to thin, plate-like form. Upper distribution limit correlates with storm wave base, below 50m. Lower distribution limit depends on light intensity and is near base photic zone)

Hohenegger, J., E.K. Yordanova, Y. Nakano & F.Tatzreiter (1999)- Habitats of larger foraminifera on the upper reef slope of Sesoko Island, Okinawa, Japan. Mar. Micropal. 36, p. 109-168.
(Peneroplis common on reef flat, hardgrounds down to 30m. Dendritina on sandy bottoms avoids uppermost slope, found down to 50m. Alveolinella similar distribution, common on hard bottom. Parasorites restricted to sandy substrates, 20-80m. Sorites and Amphisorus firm substrates between reef edge and 50m. Amphistegina species prefer hardgrounds, A. radiata also common on sand. Calcarinids withstand high energy, abundant on firm substrates close to reef edge. Baculogypsinoides deeper slope, sandy bottom, avoids shallowest parts. Hard substrates settled by Heterostegina down to 80m, occasionally on sandy bottoms. Nummulites on sands between 20- 70m. Operculina, starting at 20m, sandy substrates, rare individuals on rubble)

(online at: http://jfr.geoscienceworld.org/content/15/1/13.full.pdf)
(56 species of foraminifera in Halimeda gravels from Ontong Java Atoll lagoon between 31-38 m water depth. Amphistegina lessoni and Heterostegina depressa two most common species in all samples)

Hughes, G.W. (1988)- Modern bathyal agglutinating foraminifera from the Vella Gulf and Blanche Channel, New Georgia, Solomon Islands, Southwest Pacific. J. Foraminiferal Research 18, p. 304-310.
(online at: http://jfr.geoscienceworld.org/content/18/4/304.full.pdf)
(Diverse agglutinated foraminiferal assemblages of 39 species between 510- 1225m water depth off Solomon Islands. Below ~600m Bathysiphon, Ammodiscus, Martinottiella, Karreriella appear. Increase in abundance and diversity between 865-1070m associated with regional oxygen-maximum zone between 450m and 750m and a salinity-minimum zone below 800m)

Hughes, G.W. (1995)- Recent foraminifera from inter-reef channels, nearshore North Rarotonga, Cook Islands, South Pacific. J. Micropalaeontology 14, 1, p. 29-36.
(online at: https://www.j-micropalaeontol.net/14/29/1995/jm-14-29-1995.pdf)
(Samples from 8-65 water depth in Avatiu and Avarua channels of Rarotonga Island, S Pacific. Foraminifera mainly Cymbaloporetta bradyi, Borelis schlumbergeri, Heterostegina depressa, Peneroplis pertusus, Planorbulinella larvata, Siphogenerina raphanus, Sorites marginalis, Reussella simplex, Spirillina vivipara, Rosalina globularis, Amphistegina radiata, Planispirinella exigua and small miliolids)

Hughes, G.W. (2008)- Recent brackish Foraminifera and Thecamoebae from Sedili River, West Malaysia. Malaysia. In: M.A. Kaminski & R. Coccioni (eds.) Proc. 7th Int. Workshop on agglutinated foraminifera, Grzybowski Foundation Spec. Publ. 13, p. 41-45.
(Sedili River of S Malay Peninsula enters S China Sea through wide estuary. Lower estuarine, mangrove-fringed regime with normal marine salinity (34 ppt) has mixed calcareous-agglutinated autochthonous foraminiferal assemblage with Trochammina, Tiphotrocha comprimata, Haplophragmoides and Ammobaculites and surge-transported inner neritic calcareous benthic forams (Asterorotalia, Cellanthus, Triloculina, Ammonia, Elphidium, etc.) and rare planktonics. Estuarine, mangrove-fringed regime upstream of lower estuarine contains diverse agglutinated foraminiferal assemblages dominated by Trochammina spp., Tiphotrocha, Cribrostomoides and Ammobaculites. Upper estuarine, freshwater-slightly brackish Pandanu-grass-fringed tidal regime with low diversity agglutinated foram assemblages dominated by Miliammina fusca and Spirolocammina sp. Upstream freshwater areas of Nipa palm and grass-fringed river banks barren of foraminifera. Thecamoebae include Difflugia oblonga, Cucurbitella tricuspis and Nebela colaris)

Hunt, C.O., D.D. Gilbertson & G. Rushworth (2012)- A 50,000-year record of Late Pleistocene tropical vegetation and human impact in lowland Borneo. Quaternary Science Reviews 37, p. 61-80.
(Palynology from sections in Great Cave of Niah, Sarawak, spanning period from ~52,000-5000 BP. Vegetation of interstadials marked by lowland forest, sometimes rather dry and at times by mangroves. Stadials are indicated by taxa characteristic of open environments, with taxa now restricted to 1000-1600m above sea level, suggesting temperature declines of ca 7–9 °C relative to present)

Li, Z., Y. Saito, L. Mao, T. Tamura, Z. Li, B. Song, Y. Zhang, A. Lu, S. Sieng & J. Li (2012)- Mid-Holocene mangrove succession and its response to sea-level change in the upper Mekong River delta, Cambodia. Quaternary Research 78, 2, p. 386-399.
(Cores from upper Mekong River delta in Cambodia record transgressive sequence from floodplain freshwater marsh to tidal flat (~9.4- 6.3 ka), overlain by mangrove. At decelerated sea-level rise at ~8.3 ka pioneer (high-salinity tolerant) mangrove species Sonneratia alba and Sonneratia caseolaris appeared, then was replaced by regressive mangrove succession of increasing Rhizophora apiculata and Bruguiera spp.)

Ling, H.Y. & W.A. Anikouchine (1967)- Some spumellarian radiolaria from the Java, Philippines and Mariana trenches. J. Paleontology 41, 6, p. 1481-1491.
(Eight species of five genera of patagium-bearing and morphologically closely related spumellarian Radiolaria in three sediment cores from Java, Philippine, and Mariana Trenches. Java Trench samples from pelagic ooze in core from 3380m water depth off S Sumatra, with Euchitonia spp., Hymeniastrum, Dictyocorine and Rhopalodictyum. Also locally common diatiom Ethmodiscus rex)

Lipps, J.A. & K.P. Severin (1985)- *Alveolinella quoyi*, a living fusiform foraminifera, at Motupore Island, Papua New Guinea. Science in New Guinea 11, p. 126-137.
(Living species of Alveolinella quoyi in water depths of 3-12m, mainly on algae-covered coral rubble and around bases of living coral heads in rel. sheltered areas. Dead tests scattered over wider bathymetric range. Virtually absent on back-reef flats)

Lobegeier, M.K. (2002)- Benthic foraminifera of the family Calcarinidae from Green Island Reef, Great Barrier Reef Province. J. Foraminiferal Research 32, 3, p. 201-216.
(Three epiphytic calcarinid species on Great Barrier Reef and limited to W Indo-Pacific (absent from Indian Ocean and E of 170°W). Calcarina spengleri (=hispida) dominant and common in shallow water on reef flat. Calcarina mayori smaller and dominates in deeper water off reef flat. Baculogypsina sphaerulata is shallow water high-energy species. Best preserved Calcarina at Green Island Reef in windward shoals)

Li, B.H., X.Y. Wang, Z.M. Jian, P.X. Wang (2009)- Sea surface environment inferred from planktonic foraminifera in the southern South China Sea since the last glacial period. Palaeoworld 18, p. 23-33.
(Planktonic foraminifera from Site 17964 in southern S China Sea (SCS) show higher % warm-water species in Holocene, while temperate-water species increase during last glacial period. Pulleniatina obliquiloculata more common during glacial period. Orbulina universa test size larger than those in Indian and Atlantic Oceans, indicating warmer and less saline surface water in Equatorial- tropical W Pacific. Diameter and shell porosity of O. universa increased from last glacial to Holocene)

Mohamed, Mahani, S. Jirin & S.S. Hasan & N. Mohsin (2011)- Salinity stratification and its effects on the Malay Basin biofacies assemblages. In: Petroleum Geology Conference and Exhibition 2011, Kuala Lumpur, Poster 7, p. 141-143. *(Extended Abstract)*
(Foraminifera in Sedili Besar River Estuary dominated by Ammonia cf. takanabensis (also identified as Ammonia beccarii) in stratified water column of marine base and freshwater top. In Klang-Langat and Pahang Deltas, where minimal salinity stratification, Ammonia assemblages are quite scattered. Agglutinated forms (mainly Arenoparrella group) dominate less stratified water column)

Rasheed, D.A. (1970)- Some Recent arenaceous foraminifera from the Coral Sea. south of Papua, New Guinea. Madras University J. B39-40, p. 41-58.

Rasheed, D.A. (1970)- Some recent calcareous foraminifera belonging to the families Peneroplidae. Alveolinellidae, Lagenidae and Polymorphinidae from the Coral Ssea, South of Papua (New Guinea). Madras University J. B39-40, p. 77-110.

Rasheed, D.A. (1970)- Some calcareous foraminifera belonging to the families Rotaiiidae, Cymboloporidae, Anomalinidae, Calcarinidae, Globigerinidae and Bulinidae from the Coral Sea, South of Papua (New Guinea). Madras University J. B 39-40, p. 150-201.

Rasheed, D.A. (1971)- Some foraminifera belonging to Miliolidae and Ophthalmidiidae from the Coral Sea, South of Papua (New Guinea), Part II. J. Madras University B37-38, p. 150-201.

Rathburn, A.E. & B.H. Corliss (1994)- The ecology of living (stained) deep-sea benthic foraminifera from the Sulu Sea. Paleoceanography 9, p. 87-150.
(Deep-sea benthic foraminifera distibution in 8 box cores from 510-4515 m in thermospheric (>10°C) Sulu Sea. Site 510m dominated by Cibicidoides, Uvigerina, and Bolivina. 1005m core: mainly Siphonina Cibicidoides, Uvigerina. 2000m cores: Cibicidoides, Gyroidinoides, and Oridorsalis. 3000 and 4000m cores: Cibicidoides bradyi and Oridorsalis umbonatus dominant. Infaunal Valvulineria mexicana in sediments of 4515m core. Low bottom water oxygen values do not necessarily yield 'low-oxygen taxa' like Bolivina, Uvigerina, Chilostomella, Bulimina and Globobulimina)

Rathburn, A.E., B.H. Corliss, K.D. Tappa & K.C. Lohmann (1996)- Comparisons of the ecology and stable isotopic compositions of living (stained) benthic foraminifera from the Sulu and South China Seas. Deep Sea Research 1, 43, 10, p. 1617-1646.

(Significant differences between living deep-sea benthic foraminifera in thermospheric (>10°C) environments of Sulu Sea and psychrospheric (<10°C) conditions in S China Sea. Gavelinopsis, Bolivinopsis, Astrononion, Osangularia and Ceratobulimina common taxa in S China Sea, but rare in Sulu Sea. Siphonina and Valvulineria dominant genera at certain depths in Sulu Sea, but rare in S China Sea. Differences result from large differences of bottom-water temperatures)

Rathburn, A.E. & Q. Miao (1995)- The taphonomy of deep-sea benthic foraminifera: comparisons of living and dead assemblages from box and gravity cores taken in the Sulu Sea. Marine Micropaleontology 25, p. 127-149.
(Benthic foraminifera from 500- 4000m water in Sulu Sea. Bolivina, Bulimina, Globobulimina, Chilostomella and Uvigerina most abundant <1500m, but rel. rare in deeper water. Dominant taxa below 2000m Cibicidoides bradyi and Oridorsalis umbonatus)

Reeves, J.M. (2004)- The use of ostracoda in the palaeoenvironmental reconstruction of the Gulf of Carpenteria, Australia, from the last interglacial to present. Ph.D. Thesis University of Wollongong, p. 1-447.
(online at: http://ro.uow.edu.au/cgi/viewcontent.cgi?filename=0&article=1211&context=theses&type=additional)

Reeves, J.M., A.R. Chivas, A. Garcia & P. De Deckker (2007)- Palaeoenvironmental change in the Gulf of Carpentaria (Australia) since the last interglacial based on Ostracoda. Palaeogeogr. Palaeoclim. Palaeoecology 246, p. 163-187.
(Throughout last glacial cycle, region between Australia and New Guinea (now Gulf of Carpentaria) oscillated from open shallow marine conditions to freshwater lake behind Arafura sill. Six ostracod biofacies in last 130 ka: (1) open shallow marine with bairdiids, pectocytherinids, cytherettids; (2) shallow marine dominated by Cytherella and Hemikrithe; (3) marginal marine with Xestoleberis and Praemunita; (4) tidal channel dominated by Loxoconcha; (5) estuarine with Venericythere and Leptocythere; (6) non-marine facies: brackish lagoon/lake dominated by Cyprideis and Leptocythere and freshwater with Ilyocypris, Cyprinotus and Cypretta. Also morphological variations within species tied to paleoenvironments)

Renault-Miskovsky, J. & A.M. Semah (1998)- Palynology of the Quaternary in temperate and ropical areas: chronostratigraphy, palaeoclimatology and vegetal environment of fossil man. In: N.M. Dutta et al. (eds.) Current concepts in pollen-spore and biopollution research (S. Chandra volume), Research Period. Publ. House, Houston, p. 297-317.
(online at: http://horizon.documentation.ird.fr/exl-doc/pleins_textes/pleins_textes_7/b_fdi_53-54/010021194.pdf)
(General review of spores-pollen studies and applications in chronostratigraphy, paleoclimate and paleoenvironments. With examples from SE Asia, including work on Java Pleistocene hominid sites and Pleistocene climate changes on New Guinea, Sumatra, etc.)

Renema, W. (2003)- Larger foraminifera on reefs around Bali. Zool. Verhandelingen, Leiden, 345, p. 337-366.
(online at: www.repository.naturalis.nl/document/46850)
(Recent larger foraminifera from Bali total 19 species. Species richness similar to SW Sulawesi and Cebu, but different composition. Schlumbergerella locally abundant and geographically restricted to Lesser Sunda Islands and Java. Very low abundance of imperforate species probably due to climatic or oceanographic parameters, most likely periodic upwelling, which causes seasonal seawater temperature drops)

Renema, W. (2005)- Depth estimation using diameter-thickness ratios in larger benthic foraminifera. Lethaia 38, p. 137-141.
(Diameter-thickness ratio (D/T) of Amphistegina and Operculina varies with depth. Increased turbulence thickens test, whilst decreased light intensity causes flatter tests)

Renema, W. (2006)- Large benthic foraminifera from the deep photic zone of a mixed siliciclastic-carbonate shelf off East Kalimantan, Indonesia. Marine Micropaleontology 58, p. 73-82.

(Modern large benthic forams on Berau shelf 2 to 3 depth-controlled assemblages: shallow (20-50m; dominated by Operculina ammonoides) and deeper (50-85m; dominated by Operculina complanata and Planostegina operculinoides). Deepest living LBF at 115m. Cycloclypeus carpenteri between 55-95m)

Renema, W. (2006)- Habitat variables determining the occurrence of large benthic foraminifera in the Berau area (East Kalimantan, Indonesia). Coral Reefs 25, 3, p. 351-359.
(Composition of larger foram assemblages (35 species) on Berau carbonate shelf with barrier reef system and some reefs outside barrier. Four clusters corresponding to substrate type)

Renema, W. (2008)- Habitat selective factors influencing the distribution of larger benthic foraminiferal assemblages over the Kepulauan Seribu. Marine Micropaleontology 68, p. 286-298.
(On distribution of symbiont-bearing larger foraminifera on 'Thousand Islands' off Jakarta. Diversity and habitat fractionation increases as terrestrial and nutrient influence decline. Assemblages in nearshore reefs dominated by generalist species, while, additionally, more specialistic species occur at more offshore reefs)

Renema, W. (2010)- Is increased calcarinid (foraminifera) abundance indicating a larger role for macro-algae in Indonesian Plio-Pleistocene coral reefs? Coral Reefs 29, p. 165-173.
(Reefal habitats dominated by algae are inhabited by Calcarinidae larger foraminifera)

Renema, W. (2018)- Terrestrial influence as a key driver of spatial variability in large benthic foraminiferal assemblage composition in the Central Indo-Pacific. Earth-Science Reviews 177, p. 514-544.
(Nutrient availability, hydrodynamic energy, light intensity, substrate type and temperature important environmental parameters controlling occurrence of larger foraminifera species. Terrestrial run-off also important environmental parameter. Calcarinids more abundant with increased algal cover)

Renema, W., R.J. Beaman & J.M. Webster (2013)- Mixing of relict and modern tests of larger benthic foraminifera on the Great Barrier Reef shelf margin. Marine Micropaleontology 101, p. 68-75.

Renema, W., D.R. Bellwood, J.C. Braga, K. Bromfield, R. Hall, K.G. Johnson, P. Lunt et al. (2008)- Hopping hotspots: global shifts in marine biodiversity. Science 321, p. 654-657.
(Fossil and molecular evidence reveals at least three hotspots of high marine biodiversity in past 50 million years. They moved across globe, with timing and locations coinciding with major tectonic events. Birth and death of successive hotspots highlights link between environmental change and biodiversity patterns. Antiquity of taxa in modern Indo-Australian Archipelago hotspot emphasizes role of pre-Pleistocene events)

Renema, W, B.W. Hoeksema & J.E. van Hinte (2001)- Larger benthic foraminifera and their distribution patterns on the Spermonde shelf, South Sulawesi. Zool. Verhandelingen 334, p. 115-149.
(online at: www.repository.naturalis.nl/document/46294)
(Distribution patterns of 20 species of larger benthic foraminifera in Spermonde Archipelago, off SW Sulawesi. 13 transects sampled, down to 33m water depth. Substrate type, hydrodynamic energy, light intensity, nutrient availability and environmental stabiltity determine distribution)

Renema, W. & J. Hohenegger (2005)- On the identity of *Calcarina spengleri* (Gmelin 1791). J. Foraminiferal Research 35, p. 15-21.
(online at: http://jfr.geoscienceworld.org/content/35/1/15.full.pdf)
(On identity of Recent reef dwelling larger foram Calcarina spengleri (Gmelin 1791). Commonly confused with Calcarina mayori Cushman 1924, C. gaudichaudii d'Orbigny 1840 and C. hispida Brady 1876)

Stuijts, J.C., J.C. Newsome & J.R. Flendley (1988)- Evidence for Late Quaternary vegetational change in the Sumatran and Javan highlands. Review Palaeobotany Palynology 55, p. 207-216.
(Late Pleistocene pollen records from above 2000m on tropical mountains indicate cooler climates and more arid climates below 1200m. Sumatran and Javan sites at intermediate altitudes show higher altitude vegetation from ~18,200 yr B.P. to ca. 12,400 yr B.P., suggesting much lower forest altitudinal boundaries than today's)

Sugawara, D., K. Minoura, N. Nemoto, S. Tsukawaki, K. Goto & F. Imamur (2009)- Foraminiferal evidence of submarine sediment transport and deposition by backwash during the 2004 Indian Ocean tsunami. Island Arc 18, 3, p. 513-525.
(online at: http://onlinelibrary.wiley.com/doi/10.1111/j.1440-1738.2009.00677.x/epdf)
(Nearshore to offshore sediments from SW coast of Thailand clarify submarine sediment transport during 2004 Indian Ocean tsunami. Benthic foraminifera showed seaward migration after tsunami event (brackish agglutinated foraminifera in post-tsunami foreshore to offshore, transported offshore with tsunami backwash). Offshore planktonic and benthic species slight evidence of landward migration by tsunami)

Suhartati, M.N. (1992)- Preliminary study on the benthic foraminifera and its association with ostracoda in Porong Delta, East Java. Toyama University, 10p.
(15 sediment samples from 0.6- 21.5m along Porong delta front, Madura Straits. Most abundant species Ammonia beccarii, Calcarina calcar and Elphidium advenum. Also common Elphidium crispum, Asterorotalia trispinosa, Pseudorotalia schroeteriana and Quinqueloculina)

Suhartati, M.N. (1994)- Foraminifera bentonik dan kaitannya dengan kandungan zat hara di perairan Padang Lamun, Goba Besar, Pulau Pari, Kepulauan Seribu. Proc. 23rd Ann. Conv. Indon. Assoc. Geol. (IAGI), Jakarta, 1, p. 582-590.
('Foraminifera bentonic and their relation to nutrient content in the waters of Padang Lamun, Goba Besar, Pulau Pari, Thousand Islands'. Diverse benthic foram assemblage on seagrass beds of Pari Island, dominated by Quinqueloculina spp., Spiroloculina spp., Ammonia, Peneroplis, Rosalina, Elphidium, Calcarina, etc.)

Suhartati, M.N. (1994)- Benthic foraminifera in the seagrass beds of Pari island- Seribu islands, Jakarta. In: S. Sudara et al. (eds.) Proc. Third ASEAN-Australia Symp. Living Coastal Resources, Bangkok, 2, p. 323-329.
(Dominant species in reef-flat seagrass areas are miliolids Quinqueloculina spp., and Spiroloculina spp. Also common Ammonia beccarii, Calcarina calcar, Elphidium spp.)

Suhartati, M. Natsir (1998)- First record of brackish water agglutinated foraminifera from Java. Reopical Biodiversity 5, 1, p. 57-63.
(Ammobaculites agglutinans and Textularia pseudogramen common in Recent sediments near Solo and Poreng River mouths, E Java)

Suhartati, M. Natsir (2005)- Distribusi foraminifera bentik (*Textularia*) di Delta Porong, Jawa Timur. Agritek 4, 2, p. 1-7.

Van de Paverd, P.J. & K.R. Bjorklund (1989)- Frequency distribution of polycystine radiolarians in surface sediments of the Banda Sea, Eastern Indonesia. In: J.E. van Hinte et al. (eds.) Proc. Snellius II Symposium, Jakarta 1987, Netherlands J. Sea Research 24, 2, p. 511-521.
(Numbers of radiolarians in sea-floor sediments of Banda Sea vary widely: low from 0-950m, high between 950-4800m, and low again below 4800m water depth. Distribution reflect sediment influx and occurrence of highly productive areas in surface water)

Van de Paverd, P.J. & K.R. Bjorklund (1996)- Preservation and density of Late Quaternary radiolaria in piston cores from the Banda Sea, eastern Indonesia. Revista Espanola Micropal. 28, 3, p. 139-152.

Van der Kaars, W.A. (1991)- Palynology of eastern Indonesian marine piston-cores: a Late Quaternary vegetational and climatic record for Australasia. Palaeogeogr. Palaeoclim. Palaeoecology 85, p. 239-302.
(Pollen analyses on Late Quaternary sediments from E Indonesia marine piston cores show vegetation and environmental record for E Indonesia and N Australia. On Halmahera and N Australia montane oak forest largely replaced tropical lowland vegetation during last glacial period, while climate was cooler and drier than today, with maximum grassland cover at ~18 ka. One piston-core (G6-4) extends to 300 ka. and also shows glacial periods characterised by expanding grassland vegetation (Graminae pollen peaks), and during interglacials increases in woodland and fern cover. Mangrove vegetation expansions suggest rises in sea-level at ~244, 220 and 130 ka)

Van der Kaars, S. (1998)- Marine and terrestrial pollen records of the last glacial cycle from the Indonesian region: Bandung Basin and Banda Sea. Palaeoclimates 3, p. 209-219.

Van der Kaars, S.F. Bassinot, P. de Deckker & F. Guichard (2010)- Changes in monsoon and ocean circulation and the vegetation cover of southwest Sumatra throughout the last 83,000 years: the record from marine core BAR94-42. Palaeogeogr. Palaeoclim. Palaeoecology 296, p. 52-78.
(Palynological record from deep-sea core off SW Sumatra used to reconstruct monsoon circulation and vegetation of SW Sumatra over the last 83 ky. During marine isotope stage (MIS) 5a, SW Sumatra was covered by rainforest. During MIS 4 conditions became drier, cooler and weaker monsoon. Vegetation most open during MIS 3, between ~52- 43 ky, driest of last glacial, also increase in montane pollen. After ~43 ky everwet climate gradually developed as monsoonal circulation intensified)

Van der Kaars, S. & R. Dam (1997)- Vegetation and climate change in West-Java, Indonesia during the last 135,000 years. Quaternary Int. 37, p. 67-71.
(Sediment cores from intramontane Bandung basin (W Java) provide paleoclimatic record for last 135,000 years. Anomalously dry conditions for penultimate glacial last glacial periods, very warm and humid conditions during last interglacial. For Last Glacial Maximum temperatures 4-7°C lower than present)

Van der Kaars, S., D. Penny, J. Tibby, J. Fluin, R.A.C. Dam & P. Suparan (2001)- Late Quaternary palaeoecology, palynology and palaeolimnology of a tropical lowland swamp: Rawa Danau, West-Java, Indonesia. Palaeogeogr. Palaeoclim. Palaeoecology 171, 3-4, p. 185-212.
(Open vegetation and drier climate suggested for Late Glacial, but no evidence for cooler conditions. Onset of Holocene coincides with change to more humid conditions. Changes in diatom composition reflect shallowing of lake)

Van Iperen, J.M., A.J van Bennekom & T.C.E. van Weering (1993)- Diatoms in surface sediments of the Indonesian Archipelago and their relation to hydrography. In: H. van Dam (ed.) Twelfth Int. Diatom Symposium, Hydrobiologia 269-270, 1, p. 113-128.
(Recent marine diatoms from 53 seafloor samples between 350-7200m water depth in Indonesian Archipelago, collected during Snellius II Expedition. Three assemblages, related to overlying water mass: (1) warm saline surface waters of Pacific and Indian Ocean origin (Thalassiosira oestrupii, Rhizosolenia bergonii); (2) low-salinity lobe in Makassar Strait ((Thalassionema frauenfeldii, Cyclotella striata); (3) seasonal upwelling areas in Arafura Sea and S of Java (Thalassionema nitzschioides, Chaetoceros resting spores). Also three groups of allochthonous species, indicators of productivity in littoral environment, bottom currents and river outflow)

(online at: http://jurnal.unpad.ac.id/bsc/article/view/8280/3827)
('Abundance of pollen and spores in channels deposits of the Mahakam Delta'. Abundance of pollen higher in tidal channel deposits than in distributary channels. Oncosperma tigillarium and Nypa fruticans palmae pollen dominate in distributary channels, Rhizophora and Avicennia mangrove pollen dominant in tidal channels)

Winantris & L. Jurnaliah (2018)- Pollen and foraminifera approaches to identify sediment sources in the river mouth Mahakam, East Kalimantan. J. Geoscience Engineering Environm. Technol. (JGEET) 2, 4, p. 242-248.
(online at: http://journal.uir.ac.id/index.php/JGEET/article/view/689/627)
(Shallow core from Mahakam River before delta plain. Common pollen (incl. mangrove), rel. rare, simple foraminifera (Oolina, Ramulina, Stictogongylus vandiemenensis, etc.))

Winantris, A. Sudradjat, I. Syafri & A.T.Rahardjo (2014)- Diversitas polen Palmae pada endapan delta Mahakam Resen. Proc. 43rd Ann. Conv. Indon. Assoc. Geol. (IAGI), Jakarta, PIT IAGI 2014-195, 5p.
('Diversity of Palmae pollen in Recent deposits of the Mahakam Delta'. Sediments of Mahakam Delta contain 28 palm pollen species in delta plain, 23 in delta front. Palm pollen can help differentiate between delta plain and delta front facies: (1) delta plain dominated by Oncosperma tiggilarium, Nypa fruticans, Eugessona insignis, Pinanga parvula and Cocos nucifera; (2) delta front dominated by Oncosperma tiggilarium, Nypa fruticans, Eugessona insignis, Phoenix paludosa and Licuala sp. Palm pollen abundance nearly 4x greater in delta plain than in delta front, also higher diversity)

Winantris, I. Syafri & A.T. Rahardjo (2012)- *Oncosperma tigillarium* merupakan bagian palino karakter delta plain di Delta Mahakam, Kalimantan. Bionatura-Jurnal Ilmu-ilmu Hayati dan Fisik 14, 3, p. 228-236.
(online at: http://jurnal.unpad.ac.id/bionatura/article/viewFile/7465/3426)
('Oncosperma tigillarium is part of the palino character of delta plain in Mahakam Delta, Kalimantan'. O. tigillarium pollen of coastal palm tree widespread in Recent delta plain samples, but absent in delta front, therefore good indicator of (upper) delta plain environment)

Woodroffe, S.A., B.P. Horton, P. Larcombe & J.E. Whittaker (2005)- Intertidal mangrove foraminifera from the central Great Barrier Reef shelf, Australia: implications for sea-level reconstruction. J. Foraminiferal Research 35, 3, p. 259-270.
(Foraminifera distribution in intertidal zone tied to elevation. Agglutinated foram assemblage of Miliammina fusca, Trochammina inflata, Ammotium and Haplophragmoides between just above Mean Low Water of Neap Tides to Highest Astronomical Tide level (vertical range 1.8 m). Ammonia aoteana- dominated assemblage between just below Mean Low Water of Neap Tides and Mean High Water of Neap Tides (vertical range 0.8 m)

Wu, R., Y. Gao, Q. Fang, C. Chen, B. Lan, L. Sun & D. Lan (2013)- Diatom assemblages in surface sediments from the South China Sea as environmental indicators. Chinese J. Oceanology Limnology 31, 1, p. 31-45.
(online at: http://dspace.xmu.edu.cn/bitstream/handle/2288/53977/Diatom_assemblages_in_surface_sediments_from_the_South_China_Sea_as_environmental_indicators.pdf?sequence=1&isAllowed=y)
(Diatoms in 62 surface sediment samples from depths from 101-4185m. 256 species, dominated by Coscinodiscus africanus, Coscinodiscus nodulifer, Cyclotella stylorum, Hemidiscus cuneiformis, Melosira sulcata, Nitzschia marina, Roperia tesselata, Thalassionema nitzschioides, etc.. Seven zones)

Yahya, K., S. Shuib, F.I. Minhat, O. Ahmad & A. Talib (2014)- The distribution of benthic foraminiferal assemblages in the north-west coastal region of Malacca Straits, Malaysia. J. Coastal Life Medicine 2, 10, p. 784-790.
(online at: www.jclmm.com/qk/201410/5.pdf)
(Benthic foram assemblages from shallow marine environments around NW Penang island dominated by Ammonia (~80% of fauna), followed by Elphidium (~3%). Rare agglutinated taxa and Bolivina)

Yakzan, A.M., S. Jirin, S.S.M. Shah & R.J. Morley (2010)- The major trends of palynomorphs distribution in three fluvial systems, Peninsular Malaysia. Petrol. Geosc. Conf. Exhib. (PGCE), Kuala Lumpur 2010, p. *(Extended Abstract)*
(Palynomorph distribution patterns in three fluvial systems on W (Klang-Langat River) and E (Pahang and Sedili Besar Rivers) coasts of Peninsular Malaysia. Ecological groups. mangrove (Rhizophora), back mangrove (Acrostichum, Nypa) and hinterland pollen. Pollen and spores redistributed by currents and less by wind. Sediments in offshore area contain pollen signals which approximately mirror vegetation character onshore)

('On some fossil corals from the Netherlands Indies'. Brief description of five Late Tertiary corals collected by Verbeek from C Timor, E Seram and Daweloo island near Babar)

Donovan, S.K. & R.A. Helwerda (2017)- Neogene crinoids of southeast Asia: preservation, systematics and significance. Alcheringa 41, 2, p. 215-221.
(Cenozoic record of fossil crinoids is poor. Two new, small crinoid faunas reported of moderate diversity from Pliocene of E Kalimantan and Philippines. With Metacrinus?, Democrinus? sp.)

Donovan, S.K., W. Renema, C.A. Pinnington & C.J. Veltkamp (2012)- Significance of diadematid echinoid ossicles in micropalaeontological samples, Miocene-Pliocene of Indonesia. Alcheringa 36, 1, p. 99-105.
(On fragments of diadematoid echinoids from Miocene-Pliocene of Java, Kalimantan and Sulawesi. First report of such fossils from Neogene of the region)

Douville, H. (1923)- Sur quelques foraminiferes des Moluques orientales et de la Nouvelle Guinee. Jaarboek Mijnwezen Nederlandsch-Indie 50 (1921), Verhandelingen 2, p. 107-116.
('On some foraminifera from the eastern Moluccas and from New Guinea'. Brief description of Eocene larger forams in samples collected by Brouwer in Halmahera (Nummulites, Discocyclina, Alveolina), Roti (large Nummulites, Discocyclina), Seram (E Miocene Lepidocyclina in breccia with reworked angular clasts of Upper

Cretaceous pelagic limestone), New Guinea, Kai Besar (rounded fragments of Eocene Lacazina in quartz sandstone, etc. No location info)

Douville, H. (1924)- Revision des Lepidocyclines. Mem. Soc. Geologique France, N.S., 2, p. 5-49 and (1925) part 2, p. 51-123.
(Revision of lepidocyclinid Tertiary larger foraminifera, including material from various parts of Indonesia)

Doweld, A.B. (2014)- Proposals to conserve the name *Discoaster* against *Eu-discoaster*, *Helio-discoaster* and *Hemi-discoaster*, and the names *Heliodiscoaster* and *Hemidiscoaster* with those spellings (fossil Prymnesiophyta (Algae) vel Haptomonada (Protista)). Taxon 63, 1, p. 195-197.
(Commonly used calcareous nannofossil genus name Discoaster, as first described by Tan Sin Hok (1927), was an informal genus name that lacked a generic description and designation of type species. It combines 3 groups of species of formally described genera Eu-discoaster Tan (star-shaped discosterids; type species Discoaster brouweri Tan), Helio-discoaster Tan (rosette-shaped discoasterids; type species Discoaster barbadiensis Tan and Hemi-discoaster Tan (star-shaped discoasterids with arms welded together; type species Discoaster molengraaffii Tan). This is a proposal to legitimize the common use of Discoaster)

Drooger, C.W. (1953)- Some Indonesian Miogysininae. Proc. Kon. Nederl. Akademie Wetenschappen, B56, 1, p. 104-123.
(Revision of eight miogypsinid species described from Indonesia by Rutten and Van der Vlerk, before papers of Tan Sin Hok. Four considered valid. Miogypsinella Hanzawa is junior synonym of Miogypsinoides Yabe and Hanzawa. No reason to maintain genus Conomiogypsinoides Tan Sin Hok)

Drooger, C.W. (1955)- Remarks on *Cycloclypeus*. Proc. Kon. Nederl. Akademie Wetenschappen B58, p. 415-433.
(Measurements on Cycloclypeus eidae from Tf1/ Burdigalian of E Borneo, 40 km N of Balikpapan. No predominance of Tan Sin Hok's 1932 'elementary species' found; samples represent single populations)

Drooger, C.W. (1963)- Evolutionary trends in the Miogypsinidae. In: R. von Koenigswald (ed.) Evolutionary trends in foraminifera, Elsevier, Amsterdam, p. 315-349.
(Review of evolutionary patterns in Late Oligocene- M Miocene miogypsinid larger foraminifera. Includes some Indonesian/ Indo-Pacific material)

(online at: https://gsmpubl.files.wordpress.com/2014/09/bgsm1991001.pdf)
(Palynology is only biostratigraphic tool for correlation of non-marine sediments and correlation across facies. Age-restricted palynomorphs are relatively few, so in Tertiary palynology mainly useful in correlation rather than dating. Higher resolution requires quantitative palynological zonation schemes)

Morley, R.J. (1996)- Biostratigraphic characterization of systems tracts in Tertiary sedimentary basins. In: C.A. Caughey et al. (eds.) Proc. Int. Symposium on sequence stratigraphy in SE Asia, Jakarta 1995, Indon. Petroleum Assoc., p. 49-70.
(On palynomorph distribution patterns in sequences/ systems tracts)

Morley, R.J. (1998)- Palynological evidence for Tertiary plant dispersals in the SE Asian region in relation to plate tectonics and climate. In: R. Hall & J.D. Holloway (eds.) Biogeography and geological evolution of SE Asia, Backhuys Publ., Leiden, p. 211-234.
(online at; http://searg.rhul.ac.uk/publications/books/biogeography/biogeog_pdfs/Morley.pdf)
(Tertiary plant dispersals reflect tectonic and climatic evolution of SE Asia. Sunda Eocene flora stretched as far East as S arm of Sulawesi, and after Makassar Straits opening, part of this flora became stranded E of Wallace Line. Small number of plant taxa dispersed W across Wallace line since Miocene, at 17 Ma, 14, 9.5, 3.5 and ~1 Ma. Much of Sunda region moisture deficient in Oligocene- earliest Miocene, ever-wet rainforest becoming widespread at ~20 Ma, after which they repeatedly expanded and contracted. Greatest extent of rainforest at beginning of M Miocene. Quaternary 'glacial' periods with low sea levels and more seasonal climates, leading to more pine forests and savannah. New Guinea mountains formed in M Miocene allowing dispersal of Gondwana taxa from S. Some, like Podocarpus imbricatus, Phyllocladus subsequently dispersed into SE Asia)

Morley, R.J. (2000)- Tertiary history of the Malesian flora: a palynological perspective. In: L.G. Saw et al. (eds.) Taxonomy: the cornerstone of biodiversity, Forest Research Inst. Malaysia, Kepong, p. 197-210.

Morley, R.J. (2000)- Origin and evolution of tropical rain forests. Wiley, London, p. 1-362.
(Incl. SE Asia chapter describing Cenozoic vegetation response to plate tectonic evolution, as reflected in Indonesia palynology records. In M Eocene SW Sulawesi has Laurasian flora, and was attached to E Kalimantan. Makassar Straits became floral-faunal migration barrier in Late Eocene. First Australian- New Guinea floral elements (Casuarina, etc.) start appearing in W Java Sea around 22-21 Ma)

Morley, R.J. (2002)- Tertiary vegetation history of SE Asia, with emphasis on biogeographical relationships with Australia. In: P. Kershaw et al. (eds.) Bridging Wallaceȏs Line: the environmental and cultural history of the SE Asian- Australian region, Advances in Geoecology 34, Catena Verlag, p. 2-28.

Morley, R.J. (2003)- Interplate dispersal paths for megathermal angiosperms. In: Perspectives in plant ecology, evolution and systematics 6, 1-2, Urban & Fischer Verlag, p. 5-20.
(Review of dispersal of megathermal angiosperms between tectonic plates in Cretaceous and Tertiary. Early Cretaceous radiation of angiosperms unrelated to formation of Tethys. Nine dispersal routes, some tied to Late Cretaceous- E Tertiary Gondwana break-up and routes formed since M Eocene phases of plate collision)

Morley, R.J. (2007)- Cretaceous and Tertiary climate change and the past distribution of megathermal rainforests. In: M.B. Bush & J. R. Flenley (eds.) Tropical rainforest responses to climatic change, Chapter 1, Springer-Praxis, p. 1-31.

('Fossil Brechites (Aspergillen), particularly from the East Indies Tertiary'. Descriptions of tube-dwelling molluscs, including fossils from Pliocene of Muna Island and Miocene of Brunei, collected by Bothe)

Singh, R.K. & A.K. Gupta (2010)- Deep-sea benthic foraminiferal changes in the eastern Indian Ocean (ODP Hole 757B): their links to deep Indonesian (Pacific) flow and high latitude glaciation during the Neogene. Episodes 33, 2, p. 74-81.
(online at: www.episodes.org/index.php/epi/article/download/62122/48423)
(ODP Hole 757B, Ninetyeast Ridge, SE Indian Ocean, with well-oxygenated deep-sea benthic foraminifera (Cibicides cicatricosus, C. pseudoungerianus, Oridorsalis umbonatus) dominant in late Oligocene- E Miocene, but declining through M Miocene as Site 757 became under influence of Indonesian Throughflow with water masses from Pacific Ocean. Nuttallides umbonifera major increase at ~11 Ma, coinciding with increase in Nd isotope values, indicating substantial transport of deep Pacific water to Indian Ocean through Indonesian seaway. N. umbonifera decreases drastically during 3-2.8 Ma, coinciding with closure of Indonesian seaway and switch in shallow ITF source from warm, saline S Pacific to cool, fresh N Pacific thermocline water)

('The occurrences of Choffatella, Pseudocyclammina, Lovcenipora (Cladocoropsis) and Clypeina in the Alpine facies region'. First record of Late Jurassic Pseudocyclammina associated with Cladocoropsis mirabilis Felix from Switzerland. Assemblage formerly known from Japan and Barisan Mts of Sumatra (see also Maync 1952)

Liard, T. & R. Liard (2016)- Mesozoic vertebrate footprints discoveries from ASEAN. In: Proc. 52nd Annual Session Coord. Comm. Geoscience Programmes E and SE Asia (CCOP), Bangkok, p. 40-51.
(online at: www.ccop.or.th/download/as/52as2.pdf)
(Mesozoic vertebrate footprints found in several SE Asia countries with Indochinese redbeds, incl. in six Late Triassic- E Cretaceous formations in NE Thailand. Also in Laos, Malay Peninsula Singapore (Sentosa), Cambodia)

Lucas, S.G. (2006)- The *Psittacosaurus* biochron, Early Cretaceous of Asia. Cretaceous Research 27, p. 189-198.
(E Cretaceous primitive ceratopsian dinosaur Psittacosaurus widespread in Asia, from W Siberia, Mongolia, China to Thailand, and possibly Japan. Psittacosaurus signifies Barremian-Albian time, ~105-125 Ma)

Mamgain, V.D. & B.R.J. Rao (1965)- Orbitolines from the limestone intercalations of Dras Volcanics, Jammu and Kashmir State. J. Geol. Soc. India 6, p. 122-129.
(Barremian- Aptian Orbitolina (incl. Orbiqia drasensis n.sp.) in limestone intercalations in volcanic rocks of Dras, in Jammu and Kashmir state. Also Orbitolina trochus)

Matsumaru, K., M. Aizawa, K. Mukai & A. Furusawa (2007)- Note of orbitolinid foraminifera from the Lower Aptian (Cretaceous) Shimanoshita Mudstone, Lower Yezo Group, Hokkaido, Japan. J. Saitama University Fac. Educ. 56, l, p. 367-372.
(Mid-Cretaceous Orbitolina at several localities across accretionary prism of Japan and also Taiwan Shimanoshita location E Aptian with Palorbitolina lenticularis, Mesorbitolina parva, Praeorbitolina)

Matsumaru, K., M. Ehiro & S. Kojima (2006)- On *Orbitolina* (Foraminiferida) from the Shyok suture zone, Ladakh, NW India. J. Palaeontol. Soc. India 51, 2, p. 43-49.
(online at: http://palaeontologicalsociety.in/vol51_2/v4.pdf)
(E-M Albian Orbitolina from Lower Shyok Fm in Shyok suture zone, Ladakh, NW India, in sediments overlying ultramafic unit. Incl. Mesorbitolina texana, M. minuta, Simplorbitolina cf. conulus)

Matsumaru, K. & A. Furusawa (2007)- On orbitolinid foraminifera from the lower Aptian (Cretaceous) of Hokkaido, Japan. J. Palaeontological Soc. India 52, 1, p. 39-44.
(online at: http://palaeontologicalsociety.in/vol52_1/v4.pdf)
(Five E Aptian orbitolinid species in Takisato Orbitolina Lst of Hokkaido: Palorbitolina lenticularis, Mesorbitolina parva, M. minuta, M. libanica, Paleodictyoconus conica)

Matsuoka, A. (1995)- Jurassic and Lower Cretaceous radiolarian zonation in Japan and in the western Pacific. The Island Arc 4, p. 140-153.
(Radiolarian zonation for Jurassic- Lower Cretaceous from Japan outcrop sections and W Pacific seafloor; applicable to low and middle paleolatitude portions of Paleo-Pacific ocean. 11 zones proposed)

Matsuoka, A., Y. Aita, K. Wakita, Munasri, G. Shen, H. Ujiie, K. Sashida, V.S. Vishnevskaya, N.Y. Bragin & F. Cordey (1996)- Mesozoic radiolarians and radiolarian-bearing sequences in the circum-Pacific regions: a report of the Symposium 'Radiolarians and orogenic belts'. The Island Arc 5, 2, p. 203-213.
(Collection of 7 extended abstracts)

Maync, W. (1952)- Critical taxonomic study and nomenclatural revision of the Lituolidae based upon the prototype of the Family, *Lituola nautiloidea* Lamarck, 1804. Contr. Cushman Found. Foraminiferal Research 3, 2, p. 35-56.
(online at: https://cushmanfoundation.allenpress.com/portals/_default/files/pubarchive/CCFFR/03ccffr2.pdf)
(Includes discussion of Lacazina lamellifera Silvestri 1925 and Loftusia bemmeleni Silvestri 1932 from Saling Lst of S Sumatra (not species of Pseudocyclammina). Confirms presence of true Late Jurassic- E Cretaceous Loftusia and Pseudocyclammina in samples from Gumai Mts of S Sumatra)

Munasri (2000)- Microfossils radiolaria in Indonesia: introducing the technique of preparation. Proc. 29th Ann. Conv. Indon. Assoc. Geol. (IAGI), Bandung, 4, p. 259-264.

Munasri (2001)- Radiolarian research in some Mesozoic provinces in Indonesia. Berita Sedimentologi 16, p. 26-30.
(Brief review of radiolaria studies from Cretaceous of C Java (Karangsambung), M Cretaceous from S Sulawesi (Bantimala), Jurassic-Cretaceous from SE Kalimantan (Meratus Range), M-L Triassic and E Cretaceous from W Timor (Nefokoko, Kefamenanu, Kolbano) and M Jurassic from Roti island)

Munasri (2012)- Penggunaan fosil radiolaria dalam sintesis geologi. Pros. Pemaparan Hasil Penelitian Pusat Penelitian Geoteknologi LIPI, Bandung 2012, p. 337-350.
('The use of fossil radiolaria in geological synthesis'. Review of Mesozoic radiolarian research in Indonesia. Radiolarian fossils found in deep-sea environments and are used for biostratigraphy, tectonic reconstructions, paleo-oceanography and paleogeography. With summary of 15 areas in Indonesia with radiolarian sediments)

Munasri, K. Wakita & K. Sashida (1999)- Fosil radiolaria sebagai alat biostratigrafi yang baru di Indonesia. Proc. 27th Ann. Conv. Indon. Assoc. Geol. (IAGI), 2 (Sed. Pal. Strat.), Yogyakarta, p. 48-52.
('Fossil radiolaria as a new biostratigraphic tool in Indonesia'. Review of radiolaria studies on Java, Sulawesi, SE Kalimantan, Timor)

O'Dogherty, L. (2009)- Inventory of Mesozoic radiolarian species (1867-2008). Geodiversitas 31, 2, p. 371-481.
(Useful listing of 6296 Mesozoic radiolarian species names, in combinations as originally described, with approximate ages. E.g. helpful in confirming correctness of Hojnos (1934) Late Jurassic- E Cretaceous age assignments of E Sulawesi radiolarian rocks)

O'Dogherty L., E.S. Carter, P. Dumitrica, S. Gorican, P. De Wever, A.N. Bandini, P.O. Baumgartner & A. Matsuoka (2009)- Catalogue of Mesozoic radiolarian genera. Part 2: Jurassic-Cretaceous. Geodiversitas 31, 2, 271-356.
(Illustrated catalogue of type species of 581 genera of Jurassic- Cretaceous radiolaria. No range charts)

O'Dogherty. L. & J. Guex (2002)- Rates and pattern of evolution among Cretaceous radiolarians: relations with global paleoceanographic events. In: Proc. INTERRAD 9, Micropaleontology of Radiolarians, Micropaleontology 48, Suppl. 1, p. 1-22.

Oloriz, F. & G.E.G. Westermann (1998)- The perisphinctid ammonite *Sulaites* n. gen. from the Upper Jurassic of the Indo-Southwest Pacific. Alcheringa 22, 3-4, p. 231-240.
(New genus Sulaites comprises Oxfordian group of 'Perisphinctes' sularus and moluccanus, described from Sula Islands, and Late Oxfordian-?E Kimmeridgian 'Pseudoparaboliceras aramaraii' group described from W Papua. Genus Sulaites also known from W Papua, PNG and probably New Zealand and Nepal)

Oosting, A.M. (2004)- Palaeoenvironmental and climatic changes in Australia during the Early Cretaceous. Thesis University Utrecht, p. 1-203.
(online at: http://dspace.library.uu.nl/handle/1874/1578)
(Biochronostratigraphy for Tethyan and Boreal M Cretaceous traditionally based on ammonites, but because of lack of useful ammonites in Australian M Cretaceous, and faunal and floral latitudinal contrasts, correlations between different realms is not straightforward. Dinoflagellate cyst events combined with changes in carbon-isotope stratigraphy used here to assess Barremian- Albian stage boundaries in Australia)

Pannekoek, A.J. (1931)- Brachiopoda. In: B.G. Escher et al. (eds.) De palaeontologie en stratigraphie van Nederlandsch Oost-Indie, Leidsche Geol. Mededelingen 5 (K. Martin memorial volume), p. 396-435.
(Summary of state of knowledge of fossil brachiopods in Indonesia in 1931)

Philippe, M., A. Boura, C. Oh & D. Pons (2014)- *Shimakuroxylon* a new homoxylous Mesozoic wood genus from Asia, with palaeogeographical and palaeoecological implications. Review Palaeobotany Palynology 204, p. 18-26.
(New type of (Late?) Jurassic-E Cretaceous fossil wood with radial pitting of 'japonicum type', named here Shimakuroxylon. Geographic distribution limited to terranes which lined S-most E Asia during Jurassic (Lhasa, Indochina, Semitau, etc.). W Kalimantan specimen in British Museum collected from Buduk (Boedak) 100km N of Pontianak, associated with bivalves identified as M Jurassic by Newton (1903) (probably Late Jurassic?). Also present in Outer Zone of SW Japan. Probably indicator for warm and wet climates)

Philippe, M., H.E. Jiang, K. Kim, C. Oh, D. Gromyko, M. Harland, I.S. Paik & F. Thevenard (2009)- Structure and diversity of the Mesozoic wood genus *Xenoxylon* in Far East Asia: implications for terrestrial palaeoclimates. Lethaia 42, p. 393-406.
(Mesozoic fossil wood Xenoxylon is indicator of wet temperate biotopes and is common in Far East Asia in Carnian-Maastrichtian. It is part of 'Northern-type' leaf-flora (also call Tetori-type or Siberian-Canadian), although still present in Vietnam. Diversity peak of Xenoxylon spp. centred on NE China, where wet-temperate climate probably prevailed through Late Triassic- Cretacous (genus not known from Indonesia or Gondwana))

Remane, J. (1985)- Calpionellids. In: H.M. Bolli, J.B. Saunders & K. Perch-Nielsen (eds.) Plankton Stratigraphy, Cambridge University Press, p. 555-572.
(Review of Late Tithonian- E Valanginian planktonic protozoans of unknown affinities. Includes reported, but not illustrated, presence of calpionellids in PNG by Rickwood (1955))

Renz, G.W. (1974)- Radiolaria from Leg 27 of the Deep Sea Drilling Project. In: J.J. Veevers et al. (eds.) Initial Reports Deep Sea Drilling Project (DSDP) 27, p. 769-841.
(online at: www.deepseadrilling.org/27/volume/dsdp27_38.pdf)
(Study of Cretaceous radiolarians from Leg 17 sites, mainly Site 261 in eastern Indian Ocean and Site 262 in Timor Trough of SW Timor. Succession of three assemblages, from young to old: (1) Bathropyramis timorensis, (2) Eucyrtis columbarius and (3) Spongocyclia lanigera Assemblage, of uncertain ages (but placed in ~Berriasian-Aptian range by Sanfilippo and Riedel 1985, Fig. 2; JTvG). Includes brief discussion of Tan Sin Hok (1927) Roti sample 149 assemblage, which is believed to be younger than this DSDP material)

Riding, J.B. (2012)- A compilation and review of the literature on Triassic, Jurassic, and earliest Cretaceous dinoflagellate cysts. American Assoc. Stratigr. Palynologists (AASP), Contr. Ser. 46, Dallas, p. 1-119.
(online at: http://nora.nerc.ac.uk/19423/1/Jurassic_dinocyst_reference_list_-_revised_manuscript_March_2012_word_2003.pdf)

Riding, J.B. (2013)- The literature on Triassic, Jurassic and earliest Cretaceous dinoflagellate cysts: supplement 1. Palynology 37, 2, p. 345-354.

Sahni, M. R. (1937)- Discovery of *Orbitolina*-bearing rocks in Burma, with a description of *Orbitolina birmanica* sp. nov. Records Geological Survey India 71, p. 360-375.

Sahni, M.R. & V.V. Sastri (1957)- A monograph of the orbitolines found in the Indian continent (Chitral, Gilgit, Kashmir), Tibet and Burma, with observations on the age of the associated volcanic series. Mem. Geol. Survey India, Palaeontologia Indica 33, 3, p. 1-50.

Samathi, A., P. Chanthasit & P.M. Sander (2019)- A review of theropod dinosaurs from the Late Jurassic to mid-Cretaceous of Southeast Asia. In: Palaeobiodiversity of Southeast Asia, Annales de Paleontologie 105, 3, p. 201-215.
(Several non-avian theropod dinosaurs reported from SE Asia, mainly in NE Thailand)

Sano, S.I. & P.W. Skelton (2010)- *Epidiceras* (Bivalvia, Hippuritoidea) from the Tithonian-Berriasian Torinosu-type Limestones of the Sakawa Area, Southwest Japan. Turkish J. Earth Sciences 19, p. 733-743.
(online at: http://journals.tubitak.gov.tr/earth/issues/yer-10-19-6/yer-19-6-5-0905-2.pdf)
(Primitive rudists Epidiceras speciosum and E. guirandi from Tithonian-Berriasian Torinosu limestones in SW Japan. Epidiceras speciosum also present in Kimmeridgean-Tithonian Bau Limestone of SW Sarawak. Tethyan rudists extend into W Pacific province)

Sarjeant, W.A.S., W. Volkheimer & W.P. Zhang (1992)- Jurassic palynomorphs of the Circum-Pacific region. In: G.E.G. Westermann (ed.) The Jurassic of the Circum-Pacific, World and Regional Geology 3, p. 273-292.
(Includes discussion of Jurassic palynomorphs/ dinoflagellates of Papua New Guinea, Australia. The only Jurassic palynoflora from SE Asia is partly published work from Misool by Helby and Hasibuan: Yefbie Shale has characteristic Toarcian Susadinium assemblage and Bajocian- E Bathonian Dissioliodinium association;base Demu Fm has Late Callovian- E Oxfordian Rigaudella aemula zone, Late Oxfordian- E Kimmeridgean Wanaea spectabilis zone in rest of Demu Fm and basal Lelinta shale; later assemblages suggest age as young as Kalyptea wisemaniae zone, E Berriasian)

Sato, T. (1956)- Correlation du Jurassique inferieur japonais en basant sur les ammonites fossiles. J. Geol. Soc. Japan 62, 732, p. 490-503. *(Japanese with French abstract)*
(online at: www.jstage.jst.go.jp/article/geosoc1893/62/732/62_732_490/_pdf)
(Incl. circum-Pacific 'Aalenian' (Late Toarcian?) ammonite distribution map, showing distribution of Hammatoceras in E Indonesia)

Sato, T. (1975)- Marine Jurassic formations and faunas in Southeast Asia and New Guinea. In: T. Kobayashi & R. Toriyama (eds.) Geology and palaeontology of Southeast Asia, University of Tokyo Press, 15, p. 151-189.

Sato, T. & T. Ishibashi (1984)- Ammonoids of Southeast Asia. In: T. Kobayashi, R. Toriyama & W. Hashimoto (eds.) Geology and palaeontology of Southeast Asia, University of Tokyo Press, 25, p. 267-272.

Sato, T. & G.E.G. Westermann (1991)- 4. Japan and Southeast Asia. In: G.E.G. Westermann & A.C. Ricardi (eds.) Jurassic taxa ranges and correlation charts fror the Circum-Pacific. Newsletters Stratigraphy 24, 1-2, p. 81-108.
(Useful compilation of distribution and ranges of Jurassic macrofossils in Indonesia)

Scheibnerova, V. (1971)- Foraminifera and the Mesozoic biogeoprovinces. Records Geol. Survey New South Wales 13, p. 135-174.

Scrivenor, J.B. (1912)- Radiolaria-bearing rocks in the East Indies. Geol. Magazine (V), 9, 6, p. 241-248.
(Review of mainly Mesozoic radiolarian-bearing rocks on the Malay Peninsula and Indonesia. Radiolarites of Danau Fm of C Borneo (probable Jurassic age) do look like oceanic deposits, but other radiolaria-bearing rocks often associated with clastic material and may be of shallower marine origin)

Sha, J. (2007)- Cretaceous trigonioidid (non-marine Bivalvia) assemblages and biostratigraphy in Asia with special remarks on the classification of Trigonioidacea. J. Asian Earth Sci. 29, 1, p. 62-83.
(Seven zones distinguished in distribution of Cretaceous Trigonioides-group fresh water molluscs. Mainly on mainland Asia (China, Korea, some Thailand) and Japan; nothing on Indonesia)

Sha, J. (2010)- Historical distribution patterns of trigonioidids (non-marine Cretaceous bivalves) in Asia and their palaeogeographic signiýcance. Proc. Royal Society (London), B (Biol. Sci.), 277, p. 277-283.
(online at: http://rspb.royalsocietypublishing.org/content/early/2009/07/15/rspb.2009.0936.full.pdf)
(Non-marine trigonioidid bivalves five phases of radiation in Cretaceous of Pal-Asia: pre-Aptian (?Valanginian/ Hauterivian- Barremian), Aptian, Albian, Cenomanian and Turonian-Maastrichtian. Distribution patterns show two distinct paleo-river systems feeding trigonioidids. Trigonioidid distribution pattern suggests Japan was attached to part of E China and/or Korea in Valanginian-Cenomanian (no discussion of records from Indonesia))

Sha, J., A. Meesook & X.K. Nguyen (2012)- Non-marine Cretaceous bivalve biostratigraphy of Thailand, Southern Lao PDR and Central Vietnam. J. Stratigraphy 36, 2. p. 382-399.
(Cretaceous of Thailand, Lao and Vietnam entirely in non-marine facies (Khorat Group). Two trigoniodid bivalve assemblages: Aptian Trigonioides kobayashii- Plicatounio assemblages and mainly Albian Trigonioides diversicostatus- Pseudohyria assemblage)

Skelton, P.W. (1985)- Preadaptation and evolutionary innovation in rudist bivalves. Special Papers in Palaeontology 33, p. 159-173.
(Includes mention of early rudists Epidiceras speciosum (Goldfuss) and Valletia sp. from Bau Limestone, SW Sarawak, in collections of British Museum of Natural History, London)

Skelton, P.W., S.I. Sano & J.P. Masse (2013)- Rudist bivalves and the Pacific in the Late Jurassic and Early Cretaceous. J. Geol. Soc., London, 170, p. 513-526.
(Rudist distribution in Pacific region. Very little on SE Asia region rudists)

Skwarko, S.K. & F. Hasibuan (1989)- A brief review of literature on the larger marine invertebrates in the Cretaceous of Indonesia with list of fossils hitherto identified. Geol. Res. Dev. Centre (GRDC), Bandung, Seri Paleontologi 6, p. 44-52.
(Listing of 32 papers with descriptions of Cretaceous marine macrofossils from Indonesia since 1883. 22 faunas documented, 8 from Kalimantan, 3 each from Sumatra, Sula Islands, Misool and W Papua, one from Sulawesi. Bivalve molluscs (80 species) and cephalopods (70 species) are most diverse groups. Most determinations in need of revision)

Stevens, G.R. (1964)- The belemnite genera *Dicoelites* Boehm and *Prodicoelites* Stolley. Paleontology 7, 4, 9, 606-620.
(online at: http://palaeontology.palass-pubs.org/pdf/Vol%207/Pages%20606-620.pdf)
(Belemnite genus name Dicoelites first used by Boehm (1906) for D. dicoelus Rothpletz from Callovian-Lower Oxfordian of Roti Island, then in 1912 for material from Callovian-Kimmeridgean? of Wai Miha, Taliabu, Sula islands (D. keeuwensis). Both have two grooves, but latter re-assigned to new genus Conodicoelites)

Stevens, G.R. (1965)- The Jurassic and Cretaceous belemnites of New Zealand and review of the Jurassic and Cretaceous belemnites of the Indo-Pacific region. Paleont. Bull., Geol. Survey New Zealand 36, p. 1-283.

(Major review of J-K belemnites. In Oxfordian development of Indo-Pacific province. Kimmeridgean abundant Belemnopsis developed in Indo-Pacific, incl. Belemnopsis uhligi complex (Belemnopsis spp., incl. uhligi, indica, moluccana, etc.). Usually associated with Buchia and Inoceramus. In Tithonian uhligi complex persists, but progressively replaced by Hibolithes and Duvalia assemblage. Etc.)

Stolley, E. (1929)- Uber Ostindische Jura-Belemniten. Palaontologie von Timor, Schweizerbart, Stuttgart, 16, 29, p. 91-213.
('On East Indies Jurassic belemnites'. Belemnites from Molengraaff, Jonker and Weber collections from Timor, Roti, Misool, Sula islands, Seram, E Sulawesi and Yamdena/Tanimbar. Includes reports of Belemnopsis aucklandica from Timor (Ofu) and Roti, re-assigned to Belemnopsis uhligi-jonkeri group by Stevens 1964. B. aucklandica from Yamdena, re-described as Belemnopsis stolleyi by Stevens 1964)

Street, C. & P.R. Bown (2000)- Palaeobiogeography of Early Cretaceous (Berriasian-Barremian) calcareous nannoplankton. Marine Micropaleontology 39, p. 265-291.
(Early Cretaceous nannoplankton biogeographyWatznaueria spp. dominant in all settings. Assemblage composition relatively uniform between ~50° N and S. High-paleolatitude assemblages less rich, lower diversity and with more Crucibiscutum salebrosum, Stradnerlithus silveradius, Broinsonia matalosa, etc.. Argo Abyssal Plain, NW of Australia, southern high-latitude assemblage)

Taylor, B.A. & D.W. Haig (2001)- Barremian Foraminifera from the Muderong Shale, oldest marine sequence in the Cretaceous of the southern Carnarvon Basin, Western Australia. Micropaleontology 47, p. 125-143.
(E Cretaceous Muderong Shale from S Carnarvon Basin outcrop and wells with restricted marine Ammobaculites spp.- Haplophragmoides- Miliammina- Verneuilinoides association)

Thierry, J. (1976)- Paleobiogeographie de quelques Stephanocerataceae (Ammonitina) du Jurassique moyen et superieur; une confrontation avec la theorie mobiliste. Geobios 9, 3, p. 291-331.
(Paleogeography of Middle-Late Jurassic ammonites, showing 'Tethyan' Macrocephalites- Mayaites group distribution)

Van Gorsel, J.T. (1978)- Late Cretaceous orbitoidal foraminifera. In: R.H. Hedley and C.G. Adams (eds.) Foraminifera 3, Academic Press, London, p. 1-120.
(General review of Campanian- Maastrichtian orbitoidal larger foraminifera. In SE Asia members of 'Caribbean-Tropical Pacific' assemblage with Pseudorbitoides, Orbitoides, Asterorbis, etc. present in PNG, W Papua and E Philippines. Occurrence of Omphalocyclus in Kalimantan, never described elsewhere)

Van Gorsel, J.T. (2014)- An introduction to Mesozoic faunas and floras of Indonesia. Berita Sedimentologi 31, p. 27-56.
(online at: www.iagi.or.id/fosi/files/2014/12/BS31-Biostratigraphy_SEAsia_Part3.pdf)
(Review of Mesozoic fossils of Indonesia. Mesozoic-age faunas relatively widespread in Indonesia, from Sumatra, Java and Kalimantan in W to Sulawesi, Outer Banda Arc (Sumba, Timor, Tanimbar, Seram), Sula Islands and New Guinea in East. Triassic low-latitude Tethyan faunas present in both W and E Indonesia. Late Jurassic ammonites and bivalves from E Indonesia- New Guinea of more temperature character)

Von Hillebrandt, A., P. Smith, G.E.G. Westermann & J.H. Callomon (1992)- Ammonite zones of the Circum-Pacific region. In: G.E.G. Westermann (ed.) The Jurassic of the Circum-Pacific, Cambridge University Press, p. 247-272.
(Jurassic ammonite zonations of Circum-Pacific region. Lower Jurassic (Toarcian) ammonites known from Kalimantan, Sula Islands, Misool and Timor and Roti. M Jurassic ammonites mainly on Sula Islands and New Guinea (Bajocian-Bathonian Sulaites, Lower Callovian Macrocephalites keeuwensis assemblage. U Jurassic (Oxfordian Mayaites) also rich on Sula Islands; Kimmeridgean ammonites virtually unknown)

Von Hillebrandt, A., G.E.G. Westermann, J.H. Callomon & R.L. Detterman (1992)- Ammonites of the Circum-Pacific region. In: G.E.G. Westermann (ed.) The Jurassic of the Circum-Pacific, Cambridge University Press, New York, p. 342-359.

(Review of Jurassic ammonite stratigraphic and geographic distributions in Pacific region. Sula- New Guinea sub-province of Indo-Pacific Province in Bajocian- Bathonian, characterized by endemic Irianites, Satoceras and Praetulites. In Oxfordian more extended Indo-SE Pacific realm, with mayaitids also in New Zealand)

Wan, X., Y. Wu & G. Li (2003)- Distribution of Mid-Cretaceous Orbitolinids in Xizang (Tibet) and its paleobiogeographic implications. Acta Geologica Sinica 77, 1, p. 1-8. *(Chinese with English Abstract)*
(online at: www.jourlib.org/paper/4876549.V9XKwvkrKUk)
(Mid-Cretaceous Orbitolinid larger foraminifera common in Barremian- Cenomanian of shallow marine Neotethys margins. In Tibet limited to Lhasa Block (= SE Eurasia margin in M Cretaceous) and parts of Qiantang, extending E to Myanmar and W to Ladakh. Not present on India Plate)

Wandel, G. (1936)- Beitrage zur Kenntnis der Jurassischen Molluskenfauna von Misol, Ost Celebes, Buton, Seran und Jamdena. In: J. Wanner (ed.) Beitrage zur Palaeontologie des Ostindischen Archipels 13, Neues Jahrbuch Mineral. Geol. Palaeont., Beilage Band 75B, p. 447-526.
('Contributions to the knowledge of Jurassic molluscs from Misool, East Sulawesi, Buton, Seram and Yamdena'. Description of Mollusca, mainly collected by F. Weber. Misool faunas include upper Liassic Harpoceraten beds, lower Dogger Hammoceraten beds, Oxfordian Aucella malayomaorica marls (also in E Sulawesi), etc.)

Williams, G.L. & J.P. Bujak (1985)- Mesozoic and Cenozoic dinoflagellates. In: H. M. Bolli, J. B. Saunder & Katharina Perch-Nielsen (eds.) Plankton Stratigraphy, vol. 2, Radiolaria, diatoms, silicoflagellates, Cambridge University Press, p. 847-965.

Yabe, H. & S. Hanzawa (1926)- *Choffatella* Schlumberger and *Pseudocyclammina*- a new genus of arenaceous foraminifera. Science Reports Tohoku Imperial University, 2nd series, Geology, 9, p. 9-13.
(online at: http://ir.library.tohoku.ac.jp/re/bitstream/10097/30196/1/KJ00004178170.pdf)
(New genus name Pseudocyclammina for Late Jurassic foram 'Cyclammina' lituus from Torinosu Limestone of Japan, which species is very similar to Choffatella cyclamminoides n. sp. described by Silvestri (1925) from Sungi Tuni, Korinci, Jambi Province, Sumatra)

Yabe. H. & S. Toyama (1927)- *Cladocoropsis mirabilis* Felix from the Torinosu Limestone of Japan. Japan. J. Geol. Geogr. 5, p. 107-110.
(On (Late) Jurassic Cladocoropsis, a reefal sponge or branching stromatoporoid, in Pacific accreted terrane of Japan. (Frequently erroneously assigned to (Triassic) genus Lovcenipora. Widespread in Tethyan lagoonal-reefal limestone facies (Leinfelder et al. 2005), also known from Sumatra and Borneo))

Yin, J. & R. Enay (2004)- Tithonian ammonoid biostratigraphy in eastern Himalayan Tibet. Geobios 37, 5, p. 667-686.
(Rich ammonoid faunas in Tithonian- Lw Berriasian in E Himalayas of Tibet, with Tithonian Virgatosphinctes-Aulacosphinctoides and Uhligites-Aulacosphinctes; U Tithonian dominated by Blanfordiceras wallichi, etc. Strong affinities with E Indonesia- New Guinea and SW Pacific ammonoid faunas. Also presence of Kimmeridgean Sulaites Belemnopsis galoi)

Zhang, Q., A.P. Rasnitsyn, B. Wang & H. Zhang (2018)- Myanmarinidae, a new family of basal Apocrita (Hymenoptera: Stephanoidea) from mid-Cretaceous Burmese amber. Cretaceous Research 81, p. 86-92.
(online at: https://www.sciencedirect.com/science/article/pii/S019566711730366X)
(New family of wasps Myanmarinidae established from species discovered in M Cretaceous (E Cenomanian, ~99 Ma) Burmese amber from amber mines in Hukawng Valley of Kachin State, Myanmar)

X.4. Triassic

Ager, D.V. (1968)- The supposedly ubiquitous Tethyan brachiopod *Halorella*. J. Paleontol. Soc. India 5-9, p. 54-70.
(online at: http://palaeontologicalsociety.in/vol5/v11.pdf)
(Late Triassic rhynchonellid brachiopod Halorella common in Europe. Halorella nimassica described from Timor by Krumbeck (1921-1924) not true Halorella, but assigned to Timorhynchia n. gen.. Halorella spp. described from Seram by Wanner (1907) look more like true Halorella, but here placed in Halorelloidea)

Chablais, J., R. Martini, F. Kobayashi, G.M. Stampfli & T. Onoue (2011)- Upper Triassic foraminifers from Panthalassan carbonate buildups of Southwestern Japan and their paleobiogeographic implications. Micropaleontology 57, 2, p. 93-124.
(60 species of foraminifera in U Triassic atoll-type carbonates of Sambosan Accretionary Complex, SW Japan. With paleobiogeographic distribution analysis between Neo-Tethys and Panthalassa: six faunal provinces defined on foram assemblages)

Chablais, J., R. Martini & T. Onoue (2010)- *Aulotortus friedli* from the Upper Triassic gravitational flow deposits of the Kumagawa River (Kyushu, southwest Japan). Paleontological Research 14, 2, p. 151-160.
(Involutinid benthic foram Aulotortus friedli reported from U Triassic (Norian-Rhaetian) carbonates from capped seamount in Sambosan Accretionary Complex. From shallow-water limestone clasts in debris flow along Kumagawa River)

Chablais, J., R. Martini, S. Rigaud, E. Samankassou, T. Onoue & H. Sano (2008)- New Upper Triassic foraminifers of Sambosan accretionary complex (Japan); a tool for sedimentological and paleobiogeographic understanding of the Panthalassan Ocean. Abstracts 33rd Int. Geological Congress, Oslo *(Abstract only)*
(Late Jurassic- E Cretaceous Sambosan accretionary complex in SW Japan with U Triassic reefal limestones typical of seamount atoll in Panthalassan Ocean. Four foram associations: (1) lagoonal: common Aulotortidae, Nodosariidae and Endotebidae; (2) Back- and fore-reef: mainly Duostomina and Variostoma; (3) reefal: Galeanella, Hoyenella, Ophthalmidium and Cucurbita; (4) Shoal facies rich in ooids and near-monospecific Pilammina sulawesiana association (as known from Sulawesi). Carnian-Norian age matches Tethyan carbonate platform/ reefs in Alps and Asinepe Limestone in Seram. Foraminifera Tethyan tropical affinity, suggesting paleoposition at low-middle latitude in S Hemisphere, in agreement with presence of endemic foraminifers and corals of Timor and Sulawesi. Sambosan AC seamounts moved >15000 km to be accreted against Asian blocks. Distance in accordance with velocity and direction of plates related to Neo-Tethyan ridge opening)

Chablais, J., R. Martini, E. Samankassou, T. Onoue & H. Sano (2010)- Microfacies and depositional setting of the Upper Triassic mid-oceanic atoll-type carbonates of the Sambosan Accretionary Complex (southern Kyushu, Japan). Facies 56, p. 249-278

(Review of Paleozoic- Mesozoic marine macrofossil biostratigraphy of Indonesia, particularly in Misool island)

Hautmann, M. (2001)- Die Muschelfauna der Nayband-Formation (Obertrias, Nor- Rhat) des ostlichen Zentraliran. Beringeria 29, p. 1-181.
(online at: http://opus.bibliothek.uni-wuerzburg.de/frontdoor/index/index/docId/1817)
('The bivalve fauna of the Nayband-Formation (U Triassic, Norian-Rhaetian) of east-central Iran'. Well-preserved bivalve fauna with >100 species. Paleogeographic analysis of Tethyan bivalve faunas suggests E Tethys province, with N (Iran, Yunnan, Vietnam, Burma, W Sumatra) and S subprovince (Lhasa-block, E Indonesia terranes; attached to Gondwana until end Triassic and separated later by opening of 'Ceno-Tethys' Ocean (= Mesotethys?; JTvG))

Hautmann, M., M.J. Benton & A. Tomasovych (2008)- Catastrophic ocean acidification at the Triassic-Jurassic boundary. Neues Jahrbuch Geol. Palaont., Abhandl. 249, p. 119-127.
(On end-Triassic extinction of reefal organisms and end of carbonate deposition at Triassic- Jurassic boundary in many parts of world, caused by ocean acidification, tied to volcanic degassing)

Hautmann, M. (2012)- Extinction: end-Triassic mass extinction. In: eLS online, John Wiley & Sons, p. 1-10.
(On mass extinction at end of Triassic, at ~200 Ma. This event eliminated conodonts and nearly annihilated corals, sphinctozoan sponges and ammonoids. Probably caused by volcanic activity of Central Atlantic Magmatic Province. Lead to virtual absence of reef systems for nearly 10 Myrs in E Jurassic).

Helby, R., V.D. Wiggins & G.J. Wilson (1987)- The circum-Pacific occurrence of the Late Triassic dinoflagellate *Sverdrupiella*. Australian J. Earth Sci. 34, p. 151-152.
(Late Triassic dinoflagellate genus Sverdrupiella Bujak and Fisher widespread, abundant and relatively diverse in Norian strata. Reported from Seram, E Indonesia, in Norian Kanikeh Fm, associated with undescribed dinoflagellate suite including suessioids and Heibergella (=Hebecysta balmei zone?; JTvG). Circum-Pacific distribution of Sverdrupiella in Late Triassic similar to distribution of Late Triassic bivalve Monotis)

Hinde, G.J. (1908)- Radiolaria from Triassic and other rocks of the Dutch East Indian Archipelago. In: R.D.M. Verbeek, Molukkenverslag. Geologische verkenningstochten in het oostelijke gedeelte van den Nederlandsch Oostindische Archipel. Jaarboek Mijnwezen Nederlandsch Oost-Indie 37 (1908), Wetenschappelijk Gedeelte, p. 694-736.
(Radiolaria from Timor, Savu, Ceram, Sulawesi, Buru and Mangoli collected by Verbeek, probably mainly of Late Triassic-Jurassic age. 83 species identified, 74 new. Richest assemblages from Halobia-Daonella-bearing cherty limestones from Rote and Savu and Halobia limestone from Timor. Fewer, but similar species in loose chert pebbles collected at Seram and E Sulawesi)

Ichikawa, K. (1958)- Zur Taxonomie und Phylogenie der triadischen ĂPteriidae" (Lamellibranchiata) mit besonder Berucksichtigung der Gattungen *Claraia, Eumorphotis, Oxytoma* und *Monotis*. Palaeontographica, A111, 5-6, p. 131-212.
('On the taxonomy and phylogeny of the Triassic 'Pteridae' (Lamellibranchiata), with particular emphasis on the genera Claraia, Eumorphotis, Oxytoma und Monotis'. Includes description of new species Monotis (Entomonotis) timorica from Timor (which is same as Monotis subcircularis Gabb; Westermann 1962))

Ishibashi, T. (1975)- Some Triassic ammonites from Indonesia and Malaysia. In: T. Kobayashi & R. Toriyama (eds.) Geology and Palaeontology of Southeast Asia, University of Tokyo Press, 16, p. 45-56

Jasin, Basir (2018)- Radiolarian biostratigraphy of Malaysia. Bull. Geol. Soc. Malaysia 65, p. 45-58.
(online at: https://gsmpubl.files.wordpress.com/2018/08/bgsm201805.pdf)
(Two types of radiolarian cherts in Malaysia:bedded chert and chert blocks. Bedded cherts in Peninsular Malaysia mainly in Western Belt (Kubang Pasu, Kenny Hill and Semanggol Fms). In Sabah in Sabah Ophiolite Complex. In Sarawak bedded cherts in Serian Volcanic Fm and basal part of Pedawan Fm. Chert blocks mainly in Bentong Raub Suture Zone of Peninsular Malaysia and melanges of Sabah and Sarawak. Radiolarians from Peninsular Malaysia Late Devonian-Triassic, with 16 biozones identified. Radiolarians from Sabah and Sarawak E Jurassic- Cretaceous ages. Five hypersiliceous periods, related to volcanism: Late Devonian-E Carboniferous, Permian, Triassic, E Jurassic and Late Jurassic-Cretaceous)

Kanmera, K. (1964)- Triassic coral faunas from the Konose Group in Kyushu. Mem. Fac. Science, Kyushu Unversity, Ser. D Geology, 15, p. 117-147.
(Corals from U Triassic Pacific seamount limestones in Japan. Includes mention of species previously known only from Timor)

Kobayashi, F., R. Martini & L. Zaninetti (2005)- Anisian foraminifers from allochthonous limestones of the Tanoura formation (Kurosegawa Terrane, West Kyushu, Japan). Geobios.38, 6, p. 751-763.

(35 species of M Triassic foraminifera in allochthonous oolitic limestone blocks in Carnian Tanoura Fm in Kurosegawa Terrane of W Kyushu. Blocks of Anisian in age, based on Pilammina densa and Meandrospira dinarica, associated with Triadodiscus, Aulotortus, etc.. Terrane was part of N Gondwana margin, then isolated eastwards before E Cretaceous amalgamation with S China in E Cretaceous)

Kobayashi, T. & T. Kimura (1944)- A study on the radiolarian rocks. J. Fac. Science, Imperial University Tokyo, sec. 2, 7, 2, p. 75-187.
(Includes review of Paleozoic- Mesozoic radiolaria data from Sumatra, Kalimantan, etc. Kalimantan Danau Fm radiolaria transitional between Jurassic and Carboniferous faunas, therefore possibly more likely of Triassic age. Cherts in Tuhul Fm of S Sumatra are M-L Triassic or Permo-Triassic in age)

Kobayashi, T. & M. Tamura (1983)- The Arcto-Pacific Realm and the Trigoniidae in the Triassic Period. Proc. Japan Academy 59, B, p. 207-210.
(Family Trigoniidae evolved from Myophoriidae polyphyletically in M and Late Triassic. Triassic bivalves of New Zealand, New Caledonia and New Guinea constitute distinct fauna. U Triassic cosmopolitan genus Monotis with paleogeographically restricted species; Borneo is junction of three Monotis seas: (1) salinaria group, distributed from Europe-Himalaya to Borneo; (2) ochotica group from Siberia to Borneo through Japan and (3) subcircularis group from Canada to New Zealand and Borneo through E Pacific coast)

Kobayashi, T. & M. Tamura (1984)- The Triassic Bivalvia of Malaysia, Thailand and adjacent areas. In: T. Kobayashi et al. (eds.) Geology and Palaeontology of Southeast Asia 25, University of Tokyo Press, p. 201-227.
(Review of Triassic bivalves Claraia, Daonella-Halobia, Monotis, Trigoniaceae (incl. Myophoria, Costatoria), megalodontids in Malay Peninsula, Thailand and Sumatra)

Koike, T. (1984)- Summary of Triassic conodonts of Southeast Asia. In: T. Kobayashi, R. Toriyama & W. Hashimoto (eds.) Geology and Palaeontology of Southeast Asia, University of Tokyo Press, 25, p. 295-302.
(Brief review of Triassic conodont faunas in Malay Peninsula, Thailand and Indonesia (Carnian of Lake Toba, Sumatra; Anisian-Ladinian and Carnian and W Timor; Norian of Timor Leste))

Kristan-Tollmann, E. (1988)- A comparison of Late Triassic agglutinated foraminifera of Western and Eastern Tethys. Abhand. Geol. Bundesanstalt, Vienna, 41, p. 245-253.
(online at: www.landesmuseum.at/pdf_frei_remote/AbhGeolBA_41_0245-0253.pdf)
(Examples of common species of Triassic arenaceous and calcareous agglutinated foraminifera across Tethys realm (mainly from Austrian Calcareous Alps, PNG Kuta Limestone and Timor). Timor fauna includes Verneulinoides mauritii and Variostoma helictum)

Kristan-Tollmann, E. (1991)- Triassic Tethyan microfauna in Dachstein limestone blocks in Japan. In: T. Kotaka, J.M. Dickins et al. (eds.) Proc.Int. Symp. Shallow Tethys 3, Sendai 1990, Saito Hoon Kai Spec. Publ. 3, p. 35-49.
(First description of U Triassic foraminifera from Panthalassan seamount reefal limestone in Sambosan accretionary complex in Japan; see also Chablais et al. 2008)

Kristan-Tollmann, E. (1995)- Weitere Beobachtungen an Rhatischen nannofossilien der Tethys. Geol. Palaont. Mitteilungen Innsbruck 20, p. 1-11.
(online at: www2.uibk.ac.at/downloads/c715/gpm_20/20_001-011.pdf)
('Additional observations on Rhaetian nannofossils of the Tethys'. Eoconusphaera zlambachensis and Prinsiosphaera triassica are most common species in uppermost Triassic of calcareous Alps; also present off Wombat Plateau, NW Australia, confirming Tethys-wide distribution)

Kummel, B. (1969)- Ammonoids of the Late Scythian (Lower Triassic). Bull. Museum Comparative Zoology, Harvard University, 137, p. 311-701.
(online at: www.archive.org/details/bulletinofmuseum13719681969harv)
(Treatise on Early Triassic/ Scythian ammonoids, including material from Timor (p. 349-351), mainly from 'Block E near Nifoekoko', described previously by Welter (1922). Contains Hungarites, Pronorites spp, etc.)

McRoberts, C.A. (2008)- Rhaetian (Late Triassic) *Monotis* (Bivalvia: Pectinoida) from the eastern Northern Calcareous Alps (Austria) and the end-Norian crisis in pelagic faunas. Palaeontology 51, 3, p. 721-735.
(Species of marine bivalves of pectinoid genus Monotis provide useful biochronologic indices for Late Triassic (M Norian-earliest Rhaetian). Profound extinction event in pelagic realm at Norian-Rhaetian boundary where ~15 monotids became extinct. Surviving Monotis dwarfed compared to Norian predecessors)

McRoberts, C.A. (2010)- Biochronology of Triassic bivalves. In: S.G. Lucas (ed.) The Triassic Timescale, Geol. Soc., London, Spec. Publ. 334, p. 201-219.
(General zonation scheme for Triassic based on bivalves Claraia, Peribositria, Enteropleura, Daonella (M Triassic), Halobia (Carnian-M Norian), Eomonotis and Monotis (Late Norian). Widely distributed across Tethys, Panthalassa and Boreal regions)

Metcalfe, I. & R.S. Nicol (2007)- Conodont biostratigraphic control on transitional marine to non-marine Permian-Triassic boundary sequences in Yunnan-Guizhou, China. Palaeogeogr. Palaeoclim. Palaeoecology 252 p. 56-65.
(Permian- Triassic boundary defined by first appearance of conodont species Hindeodus parvus, also bivalve Claraia. In S Chian Permo-Triassic boundary marked by two volcanic ash beds)

Metcalfe, I., R.S. Nicoll & B.R. Wardlaw (2007)- Conodont index fossil *Hindeodus changxingensis* Wang fingers greatest mass extinction event. Palaeoworld 16, p. 202-207.
(Marine conodont fossil species, Hindeodus changxingensis restricted to very narrow stratigraphic interval from Permian-Triassic extinction event into very earliest Triassic ('disaster species'?). Geographically widespread in Tethyan Region)

Nicoll, R.S. & C.B. Foster (1998)- Triassic biozonation and stratigraphy, 1998 Chart 20. Australian Geol. Survey Org. (AGSO), 1p. *(chart)*
(online at: www.ga.gov.au/corporate_data/76687/Chart_20_NWS_Triassic.pdf)

Nicoll, R.S., I. Metcalfe & C.Y. Wang (2002)- New species of the conodont genus *Hindeodus* and the conodont biostratigraphy of the Permian-Triassic boundary interval. J. Asian Earth Sci. 20, 6, p. 609-631.
(Four new species of conodont genus Hindeodus just above Permian- Triassic boundary in S. China; boundary based on first appearance of Hindeodus parvus. Change in conodont biofacies at P-T boundary from Neogondolella (Clarkina)-dominated faunas to Hindeodus-dominated faunas, associated with increase in silt)

OčDogherty L., E.S. Carter, P. Dumitrica, S. Gorican, P. De Wever, A. Hungerbuhler, A.N. Bandini & A. Takemura (2009)- Catalogue of Mesozoic radiolarian genera. Part 1: Triassic. Geodiversitas 31, 2, p. 213-270.

OčDogherty L., E.S. Carter, S. Gorican & P. Dumitrica (2010)- Triassic radiolarian biostratigraphy. In: S.G. Lucas (ed.) The Triassic Timescale, Geol. Soc., London, Spec. Publ. 334, p. 163-200.
(General discussion of Triassic radiolarian biostratigraphy. Work on Triassic in Indonesia limited to Sashida et al. 1999 on Timor. Many studies on Thailand Triassic)

Payne, J.L., M. Summers, B.L. Rego, D. Altiner, J. Wei, M. Yu & D.J. Lehrmann (2011)- Early and Middle Triassic trends in diversity, evenness, and size of foraminifers on a carbonate platform in south China: implications for tempo and mode of biotic recovery from the end-Permian mass extinction. Paleobiology 37, 3, p. 409-425.
(Gradual increase in diversity of foraminifera through E- M Triassic. Model of E-M Triassic carbonate platform of 'Great Bank of Guizhou', S China: E Triassic with widespread thrombolite limestone, M Triassic (Anisian) platform margin Tubiphytes reef, etc.)

Payne, J.L. & B. van de Schootbrugge (2007)- Life in Triassic oceans: links between planktonic and benthic recovery and radiation. In: P. Falkowski & A.H. Knoll (eds.) Evolution of primary producers in the sea, Academic Press, Amsterdam, p. 165-189.

(Review of faunal trends through Triassic. E Triassic global reef gap after end-Permian extinctions, commonly associated with black shale. Increase in coral and algal diversity through M Triassic, but reefs dominated by Tubiphytes. E-M Carnian reefs dominated by Porifera, Norian-Rhaetian reefs dominated by corals. E Jurassic is another reef gap, again with common black shale)

Peybernes, C. (2016)- Upper Triassic mid-oceanic shallow water ecosystems of the Panthalassa Ocean: insights from the Sambosan Accretionary Complex, Southwest Japan. Doct. Thesis Universite de Geneve, Sc 4914, p. 1-229.
(online at: https://archive-ouverte.unige.ch/unige:84250)
(U Triassic carbonates of Sambosan Accretionary Complex in SW Japan: (1) limestone clasts embedded in volcaniclastic matrix with microbialite-rich Ladinian?- Lower Carnian reef biota; (2) sponge-dominated Late Carnian- Norian (Rhaetian?) reefs (built on top of basalts of low-latitude Panthalassic seamount). Paleogeographic affinities with S. Tethys. Limestone commonly as clasts in volcanoclastic breccias, probably mass-movement deposits from seamount collapse in mid-oceanic realm (very few ooids?))

Peybernes, C., J. Chablais & R. Martini (2015)- Upper Triassic (Ladinian?-Carnian) reef biota from the Sambosan Accretionary Complex, Shikoku, Japan. Facies 61, 4, p. 1-27.
(M-L Triassic (Ladinian?-Carnian) reef limestone from Sambosan Accretionary Complex, Shikoku Island, SW Japan, with scleractinian corals, calcified sponges, calcareous algae, foraminifera and microproblematica (older than previously identified reef limestones in Sambosan Complex))

Peybernes, C., J. Chablais, T. Onoue, G. Escarguel & R. Martini (2016)- Paleoecology, biogeography, and evolution of reef ecosystems in the Panthalassa Ocean during the Late Triassic: Insights from reef limestone of the Sambosan Accretionary Complex, Shikoku, Japan. Palaeogeogr. Palaeoclim. Palaeoecology 457, p. 31-51.
(Ur Triassic sponge-coral- Tubiphytes reef limestone from Sambosan Accretionary Complex at Shikoku Island, Japan, with two types of reefs, Ladinian?- E Carnian and Late Carnian-Rhaetian? Strong paleobiogeographic affinity of Late Triassic W Panthalassa reef biota with those of S Tethys Ocean)

Peybernes, C., J. Chablais, T. Onoue & R. Martini (2016)- Mid-oceanic shallow-water carbonates of the Panthalassa domain: new microfacies data from the Sambosan Accretionary Complex, Shikoku Island, Japan. Facies 62, 4, p. 1-27.
(During Late Triassic carbonate platforms expanded on continental shelves and island arcs in Tethys realm and coeval mid-oceanic shallow-water environments of Panthalassa domain. U Triassic limestone of Sambosan Accretionary Complex, SW Japan, suggests typical Sambosan platform probably carbonate bank with submerged margins and mosaic of microfacies in platform interior instead of atoll-type platform)

Archbold, N.W. (1983)- West Australian Permian brachiopoda: their taxonomy, biostratigraphy and provincialism; with an appendix of published articles including a description of Permian brachiopoda from Irian Jaya, Indonesia. Ph.D. Dissertation, University of Melbourne, 2 vols.

Archbold, N.W. (2001)- Permian Productida of Australasia: palaeobiogeographical and palaeoclimatological implications. In: S.L. Long et al. (eds.) Brachiopods, chapter 37, CRC Press, p. 363-371.
(Permian Productid brachiopods few genera in common between Westralian (rel. warm, S Tethys margin) and Austrazean (colder water, mainly endemics, strong links with New Zealand) provinces)

Archbold, N.W. & T. Hogeboom (2000)- Subsurface brachiopoda from borehole cores through the Early Permian sequence of the Carnarvon Basin, Western Australia: correlations with palynological biostratigraphy. Proc. Royal Soc. Victoria 112, 1, p. 93-109.
(Early Permian brachiopods from five wells in onshore Carnarvon Basin, tied to spore-pollen zonation. Four earliest Permian brachiopod zones of W Australia (Lyonia lyoni, Trigonotreta occidentalis, Strophalosia irwinensis and Strophalosia jimbaensis zones, in ascending order) correlated with palynological zones (Granulatisporites confluens, Pseudoreticulatispora pseudoreticulata, Striatopodocarpites fusus, Didecitriletes byroensis and Microbaculispora trisina zones, in ascending order))

Asama, K., A. Hongnusonthi, J. Iwai, E. Konôno, S.S. Rajah & M. Veeraburas (1975)- Summary of the Carboniferous and Permian plants from Thailand, Malaysia and adjacent areas. In: T. Kobayashi & R. Toriyama (eds.) Geology and Palaeontology of Southeast Asia, University of Tokyo Press, 15, p. 77-101.
(online at: http://library.dmr.go.th/library/DMR_Technical_Reports/1975/324.pdf)
(Oldest plants in SE Asia from Lower Carboniferous: known from Malaysia only (Kuantan flora, with Lepidodendron, on E Malaya Block). Five known Permian floras. Permian Jambi flora of Sumatra greatest similarities with Artinskian-Kungarian Shansi Fm of N China. Four other U Permian Cathaysian floras with Gigantopteris: Linggiu and Jengka floras from E Malay Peninsula; Phetchabun and Loei floras of N Thailand. Permian plants from W New Guinea are Gondwana-type flora, but some apparent Cathaysian elements)

Belasky, P. (1994)- Biogeography of Permian corals and the determination of longitude in tectonic reconstructions of the Paleopacific region. Canadian Soc. Petrol. Geol. Spec. Publ., p. 621-646.
(Mainly focused on American terranes. South China was center of diversity of Permian Tethyan coral province and was located near Permian equator and W margin of Paleopacific Ocean)

BouDagher-Fadel, M.K. (2008)- The Palaeozoic larger benthic foraminifera: the Carboniferous and Permian. In: Evolution and geological significance of larger benthic foraminifera, Chapter 2, Developments in Palaeontology and Stratigraphy, Elsevier, 21, p. 39-118.
(General review of Paleozoic larger foraminifera, mainly Carboniferous-Permian fusulinids. End of Permian is major extinction event)

Bronnimann, P., J.E. Whittaker & L. Zaninetti (1978)- *Shanita*, a new pillared Miliocean foraminifera from the Late Permian of Burma and Thailand. Rivista Italiana Paleont. 84, p. 63-92.
(New late M- Late Permian pillared miliolid Shanita amosi from W margin of Shan Plateau, E Myanmar. Species mainly characteristic of M Permian of Sibumasu terranes?)

Broutin, J., J. Yu, X. Shi, W. Shu & X. Qing (2020)- Terrestrial palaeofloral succession across the Permian-Triassic Boundary in the North and South China blocks: a brief review. Palaontologische Zeitschrift, p. *(in press)*
(From Late Cisuralian (E Permian)- M Lopingian, N and S China blocks located in the equatorial domain. Both with homogeneous 'Cathaysian Palaeoflora', resulting from Cisuralian southern extension and diversification from northern cradle of Cathaysian plants to South. Progressive change in floral successions due to N-ward drift of N China block, while S China block remained in sub-equatorial domain)

Cantrill, R.C. (2003)- Aspects of Ordovician conodonts and the stratigraphy of Thailand, Malaysia, and Tasmania. Ph.D. Thesis, University of Tasmania, p. 1-158
(online at: http://eprints.utas.edu.au/19158/1/whole_CantrillRobinCrawford2003_thesis.pdf)
(Incl. Ordovician conodonts from shallow tropical Lower Setul Lst from Langkawi Island (Tremadoc- Ashgill), Thung Song Lst of mainland Thailand and Ko Tarutao, Karmberg Lst of central S Tasmania)

Cantrill, R.C. & C. Burrett (2003)- The Greater Gondwana distribution of the Ordovician conodont *Panderodus nogamii* (Lee) 1975. Courier Forschungsinstitut Senckenberg 245, 1, p. 407-421.
(Panderodus nogamii (formerly Scolopodus nogamii), first described from N Korea, also in Lw Ordovician of Thailand, Malaysia, N and S China, Australia and Argentina. It ranged through M- early U Ordovician and was restricted to shallow water carbonates in tropical- subtropical paleolatitudes of Greater Gondwana)

Chapman, F. & W.J. Parr (1937)- On the discovery of fusulinid foraminifera in the Upper Palaeozoic of Northwest Australia. Victorian Naturalist 53, p. 175-179.
(Describe presence of fusulinid genera Verbeekina and Neoschwagerina in NW Australia. These were later shown to be fish remains (Crespin 1958, Quilty 1975). (No fusulinid forams recorded yet from Australia, but present on Timor and possibly also in Birds Head of New Guinea; JTvG)

Cleal, C.J. (2017)- A global review of Permian macrofloral biostratigraphical schemes. In: S.G. Lucas & S.Z. Shen (eds.) The Permian Timescale, Geol. Soc., London, Spec. Publ. 450, p.
(Incl. mention of Djambi flora of Sumatra, which may be regarded as transitional flora with taxa characteristic of both Euramerica (e.g. medullosaleans and marattialean ferns) and Cathaysia (e.g. Tingia, Cathaysiodendron) realms)

De D. Hornibrook, N. (1951)- Permian fusulinid foraminifera from the North Auckland Peninsula, New Zealand. Trans. Royal. Soc. New Zealand 79, 2, p. 319-321.
(online at: http://rsnz.natlib.govt.nz/volume/rsnz_79/rsnz_79_02_004230.pdf)
(Permian fusulinid foraminifera from limestone blocks associated with spilitic pillow lavas from Whangaroa Harbour, North Island, are first record of fusulines New Zealand. Verbeekina, Neoschwagerina margaritae, Yabeina multiseptata probably of M Permian (Wordian- Capitanian) age)

De Neve, G.A. (1961)- Correlation of fusulinid rocks from southern Sumatra, Bangka, and Borneo, with similar rocks from Malaya, Thailand and Burma. Proc. 9th Pacific Science Congress, Bangkok 1957, Geology and Geophysics 12, p. 249. *(Abstract only)*
(Four occurrences of U. Paleozoic rocks with fusulinids in Indonesia, incl. Sumatra localities of limestone with Neoschwagerina and Fusulina spp. in Palembang area, S Sumatra, (3a) E of Bukit Pendopo, discovered by Keil and (3b) 18 km W of Palembang, in Sekaju area pebbles with fusulinids in Old Neogene conglomerate by Van Tuijn (1931))

Dickins, J.M. (1956)- Permian pelecypods from the Carnarvon Basin, Western Australia. Bureau Mineral Res. Geol. Geophysics, Bull. 29, p. 1-42.

(online at: http://paleobotany.ru/pdf/Krassilov%202000%20-%20Permian%20Phytogeographic%20Zonality%20and%20Its.pdf)
(Revised scheme of Permian plant geography. Contrary to prevalent opinion views Sumatra (Jambi) and West Irian Jaya floras as 'mixed Eurogondwana' floras, and mapped in 'subtropical humothermic belt' with 'Gondwanan' India- Australia floras)

Krijnen, W.F. (1931)- Palaeozoic and Mesozoic Gastropoda, Lamellibranchiata and Scaphopoda. In: B.G. Escher et al. (eds.) De palaeontologie en stratigraphie van Nederlandsch Oost-Indie, Leidsche Geol. Mededelingen 5 (K. Martin Memorial Volume), p. 164-205.
(online at: www.repository.naturalis.nl/document/549430)
(Extensive listings of Paleozoic- Mesozoic molluscs (gastropods, bivalves) known from Indonesia in 1931. No figures)

Laveine, J.P., S. Zhang & Y. Lemoigne (2003)- Additional documentation to the knowledge of the Late Palaeozoic floras of east and southeast Asia: general conclusions and references. Revue Paleobiologie, Geneve, 22, p. 831-849.
(Floras suggest that Indochina, E Malaysia, and S and N China were closely connected during Carboniferous)

Lee, J.S. (1931)- Distribution of the dominant types of the fusulinoid foraminifera in the Chinese Seas. Acta Geologica Sinica (Bull. Geol. Soc. China) 10, p. 273-290.

Leven, E.Y. (1993)- Main events in Permian history of the Tethys and fusulinids. Stratigraphy Geol. Correlation 1, 1, p. 59-75.

Leven, E.Y. (1997)- Permian stratigraphy and fusulinida of Afghanistan with their paleotectonic implications. Geol. Soc. America (GSA), Spec. Paper 316, p. 1-134.
(Complete Permian section in Afghanistan, with rich fusulinid faunas: 58 genera, 282 species, incl. 41 new. Asselian- Sakmarian in N Afghanistan and N Pamir tropical shelf carbonates and fusulinid assemblages. Age-equivalent rocks of S Afghanistan- S Pamir all siliciclastic, lacking fusulinids, with cold-water macrofaunas typical of Peri-Gondwanan seas. In S Afghanistan first fusulinids in Sakmarian, low diversity, mainly species of Pseudofusulina. By late Yahtashian- Bolorian (late E Permian= ~late Artinskian-Kungurian; JTvG), due to milder climate and widespread transgression, distinction between S and N fusulinid assemblages starts to disappear. In C-S Afghanistan occurrences of Monodiexodina in Bolorian (= Kungurian; late E Permian), Neoschwagerina- Verbeekina- Sumatrina in Murgabian-Midian (M Permian) and miliolid Shanita amosi-Hemigordiopsis renz in Midian-Dzhulfian (M-L Permian))

Leven, E.J. & H.J. Campbell (1998)- Middle Permian (Murgabian) fusuline faunas, Torlesse Terrane, New Zealand. New Zealand J. Geol. Geophysics 41, p. 149-156.
(online at: www.tandfonline.com/doi/pdf/10.1080/00288306.1998.9514799)
(Two fusuline foram limestone localities in Torlesse Gp of Canterbury, S Island, New Zealand. Limestones associated with volcanics and hemipelagic sediments which appear 'allochthonous' (fortuitous accumulations associated with oceanic seamounts). Low diversity fauna dominated by Parafusulina (Skinnerella) japonica, also Parafusulina (S.) cuniculata. Fauna correlates best with late M Permian (E Murgabian) sequences of Tethyan affinity in Eurasia)

Leven, E.J. & J.A. Grant-Mackie (1997)- Permian fusulinid foraminifera from Wherowhero Point, Orua Bay, Northland, New Zealand. New Zealand J. Geol. Geophysics 40, p. 473-486.
(online at: www.tandfonline.com/doi/pdf/10.1080/00288306.1997.9514777)
(Abundant, diverse E-M Midian fusulinids (24 species) from Waipapa Terrane, N Island. Probably East Paleotethys-Panthalassa seamount fauna. Key species Neoschwagerina margaritae, Yabeina spp, Reichelina sp, Lepidolina shiraiwensis, etc. Much more diverse than Murgabian faunas from Torlesse, S Island)

Long, J.A. (1990)- Late Devonian Chondrichthyans and other microvertebrate remains from Northern Thailand. J. Vertebrate Paleontology 10, 1, p. 59-71.
(Microvertebrates from limestones near Burmese border town of Mae Sam Lap, N Thailand, dated as Late Famennian by conodonts. Fauna contains chondrichthyans, several types of chondrichthyan scales, actinopterygian scales and teeth, and rare acanthodian scales. Taxa suggest close affinity between Shan-Thai, East Gondwana, and S China Terranes at end of Devonian)

Macurda, D.B. (1983)- Systematics of the fissiculate Blastoidea. University of Michigan Papers on Paleontology, Ann Arbor, 22, p. 1-291.
(Strictly taxonomic review of Permian blastoids, much of which based on Timor material. No location info, biostratigraphic succession, etc.)

Mamet, B. (1974)- Une zonation par foraminiferes du Carbonifere inferieur de la Tethys Occidentale. Compte Rendus 7th Int. Congres Stratigraphie et de Geologie du Carbonifere, Krefeld, 1971, 3, p. 391-408.

Allen, H. (1991)- Stegodonts and the dating of stone tool assemblages in island S.E. Asia. Asian Perspectives 30, p. 243-266.
(online at: http://hl-128-171-57-22.library.manoa.hawaii.edu/bitstream/10125/16998/1/AP-v30n2-243-265.pdf)
(Stone tools found associated with U Pleistocene-Holocene Homo fossils on Java (Ngandong, Wajak, etc.), but no tools with any certainty associated with M Pleistocene Homo erectus)

Amano, N., A.M. Moigne, T. Ingicco, F. Semah, R. DueAwe & T. Simanjuntak (2016)- Subsistence strategies and environment in Late Pleistocene- Early Holocene Eastern Java: evidence from Braholo Cave. Quaternary Int. 416, p. 46-63.
(Climatic shifts during Pleistocene- Holocene transition in Island SE Asia resulted in changes in landscapes, impacting vertebrate community composition and human subsistence economies. Braholo Cave in E Java with mainly arboreal fauna in Late Pleistocene - E-M Holocene, but older cave deposits dominated by animal taxa associated with open environments (bovids, cervids). Reflects forest expansion at onset of Holocene)

Ambrose, S.H. (1998)- Late Pleistocene human bottlenecks, volcanic winter, and differentiation of modern humans. J. Human Evolution 34, p. 623-651.
(Toba eruption on Sumatra may have caused human population bottleneck and modern human races may have differentiated abruptly only 70,000 years ago (see also commentary by Gathorne-Hardy 2003))

Ambrose, S.H. (2003)- Did the super-eruption of Toba cause a human population bottleneck? Reply to Gathorne-Hardy and Harcourt-Smith. J. Human Evolution 45, p. 231-237.
(~73 ka Toba eruption larger than previously estimated, and caused millennium of coldest temperatures of U Pleistocene. Genetic studies suggest real population bottleneck during first half of last glacial period, but no mass extinctions. We are descendants of few small groups of tropical Africans who united in face of adversity)

Anderson, C. (1937)- Palaeontological notes no. 4; fossil marsupials from New Guinea. Records Australian Museum 20, p. 73-76.

Ansyori, M.M. (2010)- Fauna from the oldest occupation layer in Song Terus cave, Eastern Java, Indonesia- biochronological significance of the Terus layer. Masters Thesis, Mus. Natl. Histoire Naturelle, Paris, p. 1-71.
(online at: http://hopsea.mnhn.fr/pc/thesis/M2_Ansyori_MIRZA.pdf)
(Oldest archeological assemblage in Song Terus cave in Weru, Pacitan, S Mountains of S Java ranges in age from ~300-80 ka (M-L Pleistocene). Late Pleistocene faunas of upper Terus Layer (80-120 ka) resemble Punung fauna of Badoux. Big fauna dominated by Cervidae, Bovidae and Suidae. Tropical forest environment)

Anton, S.C. (1997)- Developmental age and taxonomic affinity of the Mojokerto child, Java, Indonesia. American J. Physical Anthropology 102, 4, p. 497-514.
(Mojokerto child (Perning I), Java, discovered in 1936, has been assigned to Australopithecus and multiple species of Homo modjokertensis, etc. Developmental age range probably 4-6 years)

Anton, S.C. (1999)- Cranial growth in *Homo erectus*: how credible are the Ngandong juveniles? American J. Physical Anthropology 108, 2, p. 223-236.
(Ngandong 5 and 9 skulls are adults, 8 an older juvenile and 2 is a juvenile. Adult cranial contours and pattern of contour development similar between Ngandong adults and other H. erectus adults. Nothing to suggest that Ngandong transitional in vault shape between H. erectus and H. sapiens, despite relatively large brain)

Anton, S.C. (2001)- Cranial evolution in Asian *Homo erectus*. Geol. Res. Dev. Centre (GRDC), Bandung, Spec. Publ. 27, p. 39-46.

Anton, S.C. (2002)- Evolutionary significance of cranial variation in Asian *Homo erectus*. J. Physical Anthropology 118, 4, p. 301-323.
(Principal components analysis of calvarial shape suggest regional differentiation between N Asian and SE Asian H. erectus. Most recent SE Asian fossils (e.g. Ngandong) conform to SE Asian pattern)

Anton, S.C. (2003)- Natural history of *Homo erectus*. Yearbook Physical Anthropology, Wiley, 46, p. 126-170.
(online at: http://studylib.net/download/8851017)
(In Indonesia earliest hominid crania (Sangiran) few in number, often badly deformed and ~1.6- 1.8 Ma old. More common hominids between 0.9- 1.5 Ma, with cranial capacity of ~800-1000cc. Later Indonesian hominids (Ngandong, Sambungmacan) <100ka in age, and lack upper facial, mandibular or dental remains. Cranial size 900- >1200cc, average >1000cc. Main differences between earlier and later Indonesian H. erectus: brain size increase, increases in vault height, and decreases in postorbital constriction. H. erectus, notable for increased body size, originated around Plio-Pleistocene boundary in Africa and quickly dispersed into W and E Asia.)

Anton, S.C., F. Spoor, C.D. Fellmann & C.C. Swisher (2007)- Defining *Homo erectus*: size considered. In: W. Henke et al. (eds.) Handbook of Paleoanthropology, Springer Verlag, 3, 11, p. 1655-1693.

Anton, S.C. & C.C. Swisher (2003)- Early dispersals of *Homo* from Africa. Annual Rev. Anthropology 33, p. 271-296.
(Hominin presence outside Africa started at ~1.6-1.8 Ma (Homo erectus). Includes discussion on reliability of ages of Sangiran hominid ('poo-poo everything'; JTvG). Earliest hominins at Sangiran older than 1.0 Ma and probably 1.3 Ma or older)

Aplin, K. & K.M. Helgen (2010)- Quaternary murid rodents of Timor Part I: New material of *Coryphomys buehleri* Schaub, 1937, and description of a second species of the genus. Bull. American Museum Natural History 341, p. 1-80.
(online at: http://digitallibrary.amnh.org/handle/2246/6077)
(Archeological excavations in E Timor in 1968- 2002 provided new material of Late Pleistocene and recently extinct gigantic murine (rat) Coryphomys (originally described by Hooijer 1965))

Argue, D., C.P. Groves, M.S.Y. Lee & W.L. Jungers (2017)- The affinities of *Homo floresiensis* based on phylogenetic analyses of cranial, dental, and postcranial characters. J. Human Evolution 107, p. 107-133.
(online at: www.sciencedirect.com/science/article/pii/S0047248417300866)
(Analyses of multiple morphological characteristics suggest H. floresiensis (~65-90ka) is closest to early hominins (>1.75 Ma; Homo habilis?), suggesting probably long-surviving relict of early hominin lineage, with hitherto unknown migration out of Africa. Not recent descendants of either H. erectus or H. sapiens)

(Geologists of Geological Survey of Netherlands Indies unearthed 14 Homo erectus fossils in 1931-1933 from Excavation site I Ngandong. Hominin discoveries and other vertebrate remains from thin, gravelly volcaniclastic stratum near base of fluvial terrace remnant ~20m above Solo River)

Huffman, O.F., P. Shipman, C. Hertler, J. de Vos & F. Aziz (2005)- Historical evidence of the 1936 Mojokerto skull discovery, East Java. J. Human Evolution 48, p. 321-363.
(Extensive review of history of discovery of Mojokerto child skull (Perning 1) in E Java in 1936, from hill-slope outcrop of folded conglomeratic sandstone in Duyfjes' Pucangan Fm on Kedungwaru anticline. Now accepted as Homo erectus (long believed one of oldest hominids from Java. Radiometric age of 1.81 ± 0.04 Ma from pumice near discovery section by Swisher et al., 1994, but may be from deeper beds; Huffman et al. 2006)

Huffman, O.F. & Y. Zaim (2003)- Mojokerto Delta, East Jawa: paleoenvironment of *Homo modjokertensis*- first results. J. Teknologi Mineral (ITB), 10, 2, p.
(manuscript online at: www.utexas.edu/cola/files/793055)
(Homo modjokertensis remains found in 1936 found in situ in Plio-Pleistocene bedrock at Perning site, SW of Surabaya. With Plio-Pleistocene paleogeographic map. Discovery site formed as fluvial channel on delta plain of ancient Mojokerto Delta)

Huffman, O.F., Y. Zaim, J. Kappelman, D.R. Ruez, J. de Vos, Y. Rizal, F. Aziz & C. Hertler (2006)- Relocation of the 1936 Mojokerto skull discovery site near Perning, East Java. J. Human Evolution 50, p. 431-451.
(Mojokerto skull discovery site was probably in beds 20m higher than ash layer dated as 1.81 Ma by Swisher et al. 1994, 2000)

Husain, M., S. Eko, H.A. Mahfi, W. Sunata & P. Sanyoto (1997)- Magnetostratigrafi daerah Patiayam, Kudus, Jawa Tengah. Proc. 22nd Ann. Conv. Indon. Assoc. Geophys. (HAGI), Bandung, p.
('Magnetostratigraphy of the Patiayam area, Kudus, C Java'. Hominid fossils in Patiayam area near Top Brunhes normal polarity subchron)

Hutterer, K.L. (1983)- Absolute dates for the hominid-bearing deposits in Java: an overview. Asian Perspectives 25, 2, p. 53-65.
(online at: https://scholarspace.manoa.hawaii.edu/bitstream/10125/19247/1/AP-v25n2-53-65.pdf)

(Literature review of published radiometric dates of Upper Pucangan Beds (~0.85-1.2 Ma; with 'Djetis Fauna near top at ~0.8 Ma) and Lower Kabuh Beds (~0.5-0.7 Ma; with Trinil Fauna, ~0.5 Ma) and Notopuro Beds (<0.1 Ma; with Ngandong Fauna). Tektite from Sangiran 730,000 ± 50,000 yrs)

Hyodo, M. (2001)- The Sangiran geomagnetic excursion and its chronological contribution to the Quaternary geology of Java. In: T. Simanjuntak et al. (eds.) Sangiran: man, culture, and environment in Pleistocene times, Proc. Int. Colloq. Sangiran Solo- Indonesia, Solo 1998, Jakarta, Nat. Res. Centre Archaeology, p. 320-335.
(Sangiran geomagnetic excursion, characterized by westerly declinations, ranges from below T1 Tuff up to just above diatomite layer in Pucangan Fm. Age estimated 1.56-1.48 Ma. Good time marker for tectonic event in M Matuyama chron in C and E Java)

Hyodo, M., S. Matsuûura, Y. Kamishima, M. Kondo, Y. Takeshita, I. Kitaba, T. Danhara, F. Aziz, I. Kurniawan & H. Kumai (2011)- High-resolution record of the Matuyama-Brunhes transition constrains the age of Javanese *Homo erectus* in the Sangiran dome, Indonesia. Proc. National Academy Sciences USA, 198, 49, p. 19563-19568.
(online at: www.ncbi.nlm.nih.gov/pmc/articles/PMC3241771/pdf/pnas.201113106.pdf)
(Paleomagnetic study in Sangiran area. A reverse-to-normal polarity transition in 7m thick section across Upper Tuff in Bapang (= Kabuh) Fm, with 3 short reversal episodes overlain by thick normal polarity magnetozone. Pattern closely resembles Matuyama-Brunhes transition (~0.78 Ma). Hominid last occurrence and tektite level in Sangiran nearly coincident, just below Upper Middle Tuff, which underlies MB transition. Meteorite impact preceded M-B reversal by ~12 ka)

Hyodo, M., H. Nakaya, A. Urabe, H. Saegusa, S. Xue, J. Yin & X. Ji (2002)- Paleomagnetic dates of hominid remains from Yuanmou, China, and other Asian sites. J. Human Evolution 43, 1, p. 27-41.
(Geomagnetic data suggest Homo erectus-affinity Yuanmou, SW China, hominid remains from early Brunhes chron ~0·7 Ma). Hominid fossils from Sangiran and Mojokerto, Java, do not exceed 1·1 Ma in age)

Hyodo, M., W. Sunata & E.E. Susanto (1990)- A long-term geomagnetic excursion from Plio-Pleistocene sediments in Java. In: M. Kono (ed.) Rock magnetism and paleogeophysics 17, Tokyo, p. 31-37.
(online at: http://peach.center.ous.ac.jp/rprep/Rock%20Magnetism%20and%20Paleogeophysics%20vol17%201990.pdf)
(Similar to Hyodo et al. 1992))

Hyodo, M., W. Sunata & E.E. Susanto (1992)- A long-term geomagnetic excursion from Plio-Pleistocene sediments in Java. J. Geophysical Research 97, B6, p. 9323-9335.
(Paleomagnetic records from Sangiran and Mojokerto suggest large-scale declination swing between Olduvai and Jamarillo events, lasting ~130,000 years)

Hyodo, M., W. Sunata, E.E. Susanto & H. Wahyono (1988)- Paleomagnetism of Plio-Pleistocene sediments in Sangiran, Central Java. In: M. Kono (ed.) Rock magnetism and paleogeophysics 15, DELP Publ. 23, Tokyo, p. 31-34.
(online at: http://peach.center.ous.ac.jp/rprep/Rock%20magnetism%20and%20Paleogeophysics%20vol15%201988.pdf)
Nine polarity boundaries were located in outcrops of Sangiran area. The stratigraphic levels with Pithecantropus fossils (uppermost Pucangan- Kabuh Fms) range from lower boundary of Jaramillo event at 0.97 Ma to Brunhes-Matuyama boundary at 0.73 Ma)

Hyodo, M., N. Watanabe, W. Sunata & E.E. Susanto (1993)- Magnetostratigraphy of hominid fossil bearing formations in Sangiran and Mojokerto, Java. Anthropological Science 101, 2, p. 157-186.
(online at: https://www.jstage.jst.go.jp/article/ase1993/101/2/101_2_157/_pdf)
(Also in Rock magnetism and paleogeophysics 19 (1992). Paleomagnetic study of Plio-Pleistocene formation at Sangiran and Mojokerto. Levels of hominid fossils in Sangiran range from lower Jamarilo event at 0.97 Ma to Brunhes-Matayama boundary at 0.73 Ma. Homo modjokertensis in Mojokerto lies at lower border of Jamarillo event at 0.97 Ma)

Ibrahim, Y.K., L.T. Tshen, K.E. Westaway, E.O. Cranbrook, L. Humphrey, R.F. Muhammad, J.X. Zhao & L.C. Peng (2013)- First discovery of Pleistocene orangutan (*Pongo* sp.) fossils in Peninsular Malaysia: biogeographic and paleoenvironmental implications. J. Human Evolution 65, 6, p. 770-797.
(Nine isolated fossil Pongo teeth from Batu caves in Peninsular Malaysia are first fossil Pongo in Peninsular Malaysia, showing ancestral Pongo successfully passed biogeographic divide between mainland SE Asia and Sunda subregion before 500 ka. Pongo remains indicate forest habitat, implying that during Last Glacial Phase sufficient forest cover persisted in W coast plain of Peninsular Malaysia)

Indriati, E. (2004)- Indonesian fossil hominid discoveries from 1889 to 2003: catalogue and problems. In: S. Akiyama et al. (eds.) Proc. Fifth and Sixth Symposia on collection building and natural history studies in Asia and the Pacific Rim, National Science Museum Mon., Tokyo, 24, p. 163-177.
(Indonesian hominid fossil discoveries catalogue in 1975 listed 57 hominids, in 2003 list more than doubled, albeit lacking provenance for some discoveries)

Indriati, E. & S.C. Anton (2008)- Earliest Indonesian facial and dental remains from Sangiran, Java: a description of Sangiran 27. Anthropological Science 116, 3, p. 219-229.
(online at: https://www.jstage.jst.go.jp/article/ase/116/3/116_070814/_pdf)
(Sangiran 27 only known facial skeleton of Homo erectus. Probably from earliest Pleistocene Sangiran (Pucangan) Fm. Highly mineralized. Ar/Ar dates on bracketing tuffs suggest age of 1.58-1.66 Ma. Sangiran 27 best considered member of H. erectus, but more robust morphology than contemporaneous fossils from Georgia and Kenya)

Indriati, E., C.C. Swisher, C. Lepre, R.L. Quinn, R.A. Suriyanto, A.T. Hascaryo, R. Grun, C.S. Feibel et al. (2011)- The age of the 20 meter Solo River terrace, Java, Indonesia and the survival of *Homo erectus* in Asia. Plos One 6, 6, e21562, p. 1-10.
(online at: www.plosone.org/article/info:doi%2F10.1371%2Fjournal.pone.0021562)
(Wide range and conflicting results of radiometric ages for hominid-bearing beds of Solo River 20m terrace deposits in E Java. New radiometric ages suggest older age than currently accepted. Ar/Ar ages from '20m terrace' at Ngandong and Jigar 546 ± 12 ka, but ESR/U-series results 143 ka± 20 ka, possibly indicating leaching of uranium (NB: Rizal et al. (2019) most likely age of bone bed ~117-108 ka))

Ingicco, T. (2010)- Les primates quaternaires de Song Terus (Java Est, Indonesie): implications paleobiogeographiques et archeozoologiques pour l'Asie du Sud-Est. Doct. Thesis Museum Nat. Histoire Naturelle, Paris, p. 1-281.
('The Quaternary primates of Song Terus (East Java, Indonesia): paleobigeographic and archeozoological implications for SE Asia'. Bones of non-human primates 70% of E Holocene mammal remains in caves in

Punung region of SE Java. Facial parts of monkeys found with pre-Neolithic human burials, as noted by Van Heekeren. Primate speciation patterns in islands of SE Asia suggest continuous connections between Sunda Islands through forested terrain during Pleistocene. Tooth micro-wear suggests commensalism between monkeys (especially Trachypithecus auratus) and humans at SongTerus from 9000-5000 years ago)

Ingicco, T. (2012)- Les primates quaternaires de Song Terus (Java Est, Indonesie): implications paleobiogeographiques et archeozoologiques pour l'Asie du Sud-Est. Bull. Mem. Soc. Anthropologie Paris 24, p. 199-203.
(Summary of thesis above)

Ingicco, T., J. de Vos & O.F. Huffman (2014)- The oldest gibbon fossil (Hylobatidae) from insular Southeast Asia; evidence from Trinil (East Java, Indonesia), lower/middle Pleistocene. PloS One 9, 6, E99531, p. 1-15.
(online at: http://journals.plos.org/plosone/article?id=10.1371/journal.pone.0099531)
(Fossil femur excavated by Dubois in 1891-1900 in E-M Pleistocene bone bed of Trinil and now in Dubois collection at Naturalis museum, Leiden, recognized here as that of Hylobatidae (gibbon), making it oldest insular record in SE Asia. Living Hylobatidae inhabit evergreen rain forests, so paleoenvironment in greater Trinil area included forests of this kind in E-M Pleistocene)

The hominids and their environment during the Lower and Middle Pleistocene of Eurasia, Orce 1995, p. 353-362.

Van den Bergh, G.D., J. de Vos, P.Y. Sondaar & F. Aziz (1996)- Pleistocene zoogeographic evolution of Java (Indonesia) and glacio-eustatic sea-level fluctuations: a background for the presence of *Homo*. Indo-Pacific Prehistory Assoc. Bull. 14 (Chiang Mai Papers, 1), p. 7-21.
(online at: http://ejournal.anu.edu.au/index.php/bippa/article/view/425/414)

(Relation of Java mammal faunal changes in last 2.5 My to global sea level changes not clear. No proof for presence of mammals on Java during first marked glacio-eustatic sea level lowering at 2.4 Ma. Oldest recognizable fauna is Satir fauna, age between 2- 1.5 Ma and indicates island conditions. Isolated conditions continue until ~0.8 Ma, suggested by unbalanced Ci Saat (1.2 Ma) and Trinil faunas (0.9 Ma), when Homo erectus arrived. Major faunal immigration at 0.8 Ma with Kedung Brubus fauna, corresponding with marked lowering of glacio-eustatic sea level)

Van Den Bergh, G.D., R. Due Awe, M.J. Morwood, T. Sutikna, Jatmiko & E.W.Saptomo (2008)- The youngest *Stegodon* remains in Southeast Asia from the Late Pleistocene archaeological site Liang Bua, Flores, Indonesia. Quaternary Int. 182, p. 16-48.
(Stegodon remains from Late Pleistocene of Liang Bua cave described as new endemic dwarf subspecies: Stegodon florensis insularis. Hominin activities likely played role in Stegodon bone accumulation at cave)

Van Den Bergh, G.D., Y. Kaifu, I. Kurniawan, R.T. Kono, A. Brumm, E. Setiyabudi, F. Aziz & M.J. Morwood (2016)- *Homo floresiensis*-like fossils from the early Middle Pleistocene of Flores. Nature 534, 7606, p. 245-248.
(online at: http://udel.edu/~mcdonald/vandenbergh2016.pdf)
(Hominin fossils excavated in 2014 from early M Pleistocene Mata Menge site, Soa Basin, C Flores, include mandible fragment and isolated teeth, similar to Late Pleistocene H. floresiensis of Liang Bua. Dated as ~0.7Ma, oldest known hominin remains from Flores. Mata Menge fossils tend to support view that H. floresiensis is dwarfed descendent of early Asian Homo erectus)

Van Den Bergh, G.D., I. Kurniawan, M.J. Morwood, C.J. Lentfer, Suyono, R. Setiawan & F. Aziz (2009)- Environmental reconstruction of the Middle Pleistocene archaeological/ palaeontological site Mata Menge, Central Flores, Indonesia. In: F. Aziz et al. (eds.) Geology, palaeontology and archaeology of the Pleistocene Soa Basin, Central Flores, Indonesia, Chapter 4, Pusat Survei Geologi, Bandung, Spec. Publ. 36, p. 59-94.
(M Pleistocene paleontological- archeological Mata Menge site in Soa basin represents lake shore deposits, aged ~0.80- 0.88 Ma. Common Stegodon florensis bones from aged animals that probably died natural death. Despite abundance of stone artefacts in same layers no evidence for butchering. FT age of overlying white tuff 0.75 ± 0.07 Ma (Morwood et al. 1998). Fossils all in 0.5- 1.3m thick 'Unit B'; overlying Unit C tuffaceous siltstone and sand unfossiliferous)

Van den Bergh, G.D., Bo Li, A. Brumm, R. Grun, D. Yurnaldi, M.W. Moore, I. Kurniawan, R. Setiawan, F. Aziz, R.G. Roberts, Suyono, M. Storey, E. Setiabudi & M.J. Morwood (2016)- Earliest hominin occupation of Sulawesi, Indonesia. Nature 529, 7585, p. 208-211.
(New excavations at Talepu in Walanae Basin NE of Maros with stone artefacts and fossil megafauna (Bubalus, Stegodon, Celebochoerus) from stratified deposits that accumulated from before 200 ka until ~100ka)

Van den Bergh, G.D., H.J.M. Meijer, R.A. Due, M.J. Morwood, K. Szabo, L.W. van den Hoek Ostende, T. Sutikna, E.W. Saptomo, P.J. Piper & K.M. Dobney (2009)- The Liang Bua faunal remains: a 95 k.yr. sequence from Flores, East Indonesia. J. Human Evolution 57, 5, p. 527-537.
(Excavations at Liang Bua limestone cave on Flores faunal sequence spanning the last 95 ky. Major climatic fluctuations, and two human species: H. floresiensis from 95- 17 ka, and modern humans from 11 ka- Present. Faunal assemblage comprises island gigantism in small mammals and dwarfing of large taxa. Confirms long-term isolation, impoverishment, and phylogenetic continuity of Flores faunal community)

Weidenreich, F. (1951)- Morphology of Solo man. Anthropological Papers American Museum Natural History 43, 3, p. 203-288.
(online at: http://digitallibrary.amnh.org/handle/2246/297)
(Description of 11 skulls of Homo soloensis, collected between 1931 and 1941 from Late Pleistocene Solo river 20m terrace at Ngandong, left bank of Solo River, 6 miles N of Ngawi, C Java. Associated with rich mammalian fauna (Sus terhaari, Cervus javanicus) and possible bone tools and stone balls. Hominins believed to be younger than those from other parts of Java (Sangiran, Mojokerto, Trinil). Remarkable absence of other hominin body parts. With introduction by Von Koenigswald on geology and associated fauna (NB: unfinished study due to Weidenreich's death in 1948; see also Santa Luca 1980))

Weinand, D.C. (2005)- A reeevaluation of the paleoenvironmental reconstructions associated with Homo erectus from Java, Indonesia, based on the functional morphology of fossil bovid Astragali. Ph.D. Thesis University of Tennessee, p. 1-173.
(online at: https://trace.tennessee.edu/utk_graddiss/2315)
(Study of bovid astragali ('cow knuckle bones') from hominid-bearing sites in Java indicate paleoenvironment at Trinil site (~ 1 Ma) dominated by vegetated river valleys and upland forests, broken by grasslands. Grasslands probably expanded at time of Kedung Brubus locality (~0.8 Ma). Environmental change and immigration of new species important to evolutionary success of Homo erectus in M Pleistocene)

Westaway, K.E. (2006)- Reconstructing the Quatermary landscape evolution of Western Flores: an environmental and chronological context for an archaeological site. Ph.D. Thesis University of Wollongong, p. 1-411.
(online at: http://ro.uow.edu.au/theses/562/)
(Age range for occupation of Liang Bua cave by Homo floresiensis 95-11 ka, most intensive phases of occupation 74-61 and 17-11 ka, depositional age of holotype skeleton 36-14 ka, and age of oldest human skeletal remains found on Flores 95-74 ka)

Westaway, K.E. & C.P. Groves (2009)- The mark of ancient Java is on none of them. Archaeology in Oceania 44, 2, p. 84-95.
(Suggested links between Javanese E Pleistocene Homo erectus and Australian Late Pleistocene Homo sapiens crania (Thorne, etc.) questionable. Hybridization of two species unlikely: no chronological overlap and phylogenetic analysis indicate no close genetic relationship between Ngandong-like population from Java and late Pleistocene Australian fossils from Willandra Lakes)

Westaway, K.E., J.M. Morwood, R.G. Roberts, A.D. Rokus, J.X. Zhao, P. Storm, F. Aziz, G. van den Bergh, P. Hadi, Jatmiko & J. de Vos (2007)- Age and biostratigraphic significance of the Punung rainforest fauna, East Java, Indonesia, and implications for *Pongo* and *Homo*. J. Human Evolution 53, p. 709-717.
(Punung Fauna of Java represents faunal turnover when Stegodon and other archaic mammal species were replaced by modern fauna, including rainforest-dependent species such as Pongo pygmaeus (orangutan). Dated as early Last Interglacial age (between 128±15 and 118±3 ka))

Westaway, K.E., M.J. Morwood, R.G. Roberts, J.X. Zhao, T. Sutikna et al. (2007)- Establishing the time of initial human occupation of Liang Bua, western Flores, Indonesia. In: R. Grun & R.G. Roberts (eds.) LED 2005, 11th Int. Conf. Luminescence and electron spin resonance dating, Quaternary Geochron. 2, p. 337-343.

Westaway, K.E., M.J. Morwood, T. Sutikna, M.W. Moore, A.D. Rokus, G.D. van den Bergh, R.G. Roberts & E.W. Saptomo (2009)- *Homo floresiensis* and the late Pleistocene environments of eastern Indonesia: defining the nature of the relationship. Quaternary Science Reviews 28, p. 2897-2912.
(Occupation deposits in Liang Bua limestone cave on Flores span ~95 kyrs and contain abundant stone artefacts, well preserved faunal remains and evidence for endemic hominin Homo floresiensis. H. floresiensis endured rapidly fluctuating environmental conditions over last ~100 ka. Peaks in occupation at 100-95, 74-61 and 18-17 ka correlate with episodes of channel formation and erosion in cave, which in turn correspond with high rainfall, thick soils and high bio-productivity outside)

Westaway, K.E., J.X. Zhao, R.G. Roberts, A.R. Chivas, M.J. Morwood & T. Sutikna (2007)- Initial speleothem results from western Flores and eastern Java, Indonesia: were climate changes from 47 to 5 ka responsible for the extinction of *Homo floresiensis*? J. Quaternary Science 22, 5, p. 429-438.
(O and C isotopic shifts in stalagmites from W Flores and E Java suggest rapid increase in rainfall around 13 ka or 17–16.5 ka, and may be related to abrupt disappearance of Stegodon and Homo floresiensis in W Flores)

Westaway, K.E., J. Louys, R. Due Awe, M.J. Morwood, G J. Price, J.X. Zhao, M. Aubert, R. Joannes-Boyau, T.M. Smith et al. (2017)- An early modern human presence in Sumatra 73,000-63,000 years ago. Nature 548, 7667, p. 322-325.
(Reinvestgation of Lida Ajer cave in Padang Highlands, W Sumatra, which yielded Late Pleistocene human teeth (Dubois 1890), associated with rich rainforest fauna. Enamel-dentine junction morphology, enamel thickness and comparative morphology show that teeth belong to anatomically modern humans (Homo sapiens). Dating of bone-bearing sediments and U-series/ electron spin resonance dating of Pongo mammalian teeth place modern humans in Sumatra between 73-63 ka. Evidence of rainforest occupation by H. sapiens at ~70 ka is ~20 ka earlier than assumed timing of dispersal of modern humans across SE Asia)

Westaway, M.C. (2002)- Preliminary observations on the taphonomic processes at Ngandong and some implications for a late *Homo erectus* survivor model. Tempus 7, p. 189-193.
(At Late Pleistocene Ngandong site different taphonomic alterations between human and non-human skeletal elements. Homo erectus remains may be older than many non-hominin fossils)

Curiale, J. & J. Decker (2007)- Eocene oil-prone source rock potential of Central Indonesia. American Assoc. Petrol. Geol. (AAPG) Bull. 91, Program Abstracts 2007 AAPG Ann. Mtg. Long Beach.
(Occurrence of oil-prone, terrigenous Eocene source potential in extensive areas of E Borneo and W Sulawesi, and oil-prone, lacustrine Eocene potential in S part Makassar Strait. Eocene-sourced oil accumulations known in Barito Basin (Tanjung Field). Extent of other Eocene-sourced accumulations (e.g., Tengkawang oil of E Kalimantan, surface seeps in SW Sulawesi, Pangkat oil tests in S Makassar Strait) not determined)

Curiale, J.A., J. Decker, C.A. Caughey & H.F. Schwing (2003)- Oil-prone lacustrine source rock potential in Central Indonesia. 2003 AAPG/ SEPM Conv., p. 35-36. *(Abstract only)*
(E Borneo and W Sulawesi oils show partial or total lacustrine signature. C Indonesian oils with partial or complete lacustrine signature include Pantai-1 (off E coast Borneo) and Pangkat-1 (S Makassar Strait). Both oils elevated 4-methylsteranes. Pangkat-1 oil with beta-carotane, elevated sulfur (S = 2.1%) and very light carbon isotope ratios (d13C = -30.3 ppm). Very low maturity levels, possibly early generation from Type I-S kerogen deposited in hypersaline setting. Other C Indonesian oils reveal lacustrine source signature indicating freshwater depositional setting. Paleogene rifting between Borneo and Sulawesi provided potential development of oil-prone lacustrine source rocks)

Curiale, J.A., E. Lumadyo & R. Lin (2002)- Petroleum and source rock geochemistry of the Salayar Basin (offshore Sulawesi), Indonesia. AAPG-SEPM Ann. Conv., Houston 2002, p. *(Abstract only).*
(Salayar Basin off SW Sulawesi, at S-most extent of Makassar Strait in Indonesia. Cretaceous- M Eocene rifting created Dewakang graben, followed by inversion through M Miocene. Depositional models and regional data suggest lacustrine, oil-prone sources in Paleocene, and oil-prone coaly sequences in M Eocene. Both source facies proven to E and NE at basin margins. Eocene 'Kelara Limestone' source for low-wax, low-asphaltene oil in basin center. Underlying Eocene coals- coaly shales analogous to oil-prone Barito Basin sapropelic coals, and responsible for oil seeps in SW Sulawesi. Possible occurrence of older, lacustrine oil-prone sources in Salayar Basin significant upside to exploration. Oil-prone sources mature in deepest parts of basin)

Curiale, J.A., P. Kyi, I.D. Collins, D. Aung, N. Kyaw, N.M. Nyunt & C.J. Stuart (1994)- The Central Myanmar (Burma) oil family-composition and implications for source. Organic Geochem. 22, 2, p. 237-255.

Davis, R.C., S.W. Noon & J. Harrington (2007)- The petroleum potential of Tertiary coals from Western Indonesia: relationship to mire type and sequence stratigraphic setting. Int. J. Coal Geology 70, p. 35-52.
(500 deltaic sediments analysed from 14 basins in W Indonesia. Main peat-forming episodes: (1) Paleogene syn-rift transgressive, (2) Paleogene-Neogene post-rift transgressive, (3) Neogene regressive. Paleogene syn-rift coals more hydrogen-rich than Neogene coals and more oil-prone. Pliocene coals from regressive sequence in Sumatran fore-arc very hydrogen-poor. Systematic increase in HI with increasing rank suggests pyrolysis underestimates petroleum potential in low rank coals. Vitrinite type more important for petroleum potential than liptinite content. Four coal sub-types: I, II and III low ash coals and likely deposited in raised mires. Sub-type IV hydrogen-rich, high-ash Eocene coals, deposited in submerged mire. Highly degraded peats result in hydrogen-rich coals with higher proportion of detrital vitrinite. Degree of degradation related to time peat spends in zone of influence of water table; unlikely related to tectonostratigraphic setting)

Doust, H. & G. Lijmbach (1997)- Charge constraints on the hydrocarbon habitat and development of hydrocarbon systems in Southeast Asia Tertiary Basin. In: J.V.C. Howes & R.A. Noble (eds.) Proc. Int. Conf. Petroleum Systems of South East Asia and Australasia, Jakarta, Indon. Petroleum Assoc. (IPA), p. 115-125.
(Most SE Asia basins similar geological history of Early Tertiary graben formation, fill and transgression, followed by E-M Miocene marine transgression and Late Tertiary regressive deltaic progradation. Main source rocks: (1) Early synrift lacustrine (Oligocene- E Miocene), oil prone; (2) Late synrift transgressive deltaic (Oligocene- E Miocene), oil and gas prone; (3) Early postrift marine (E-M Miocene transgression), mainly gas prone; and (4) Late postrift regressive deltaic (M Miocene-Pliocene), oil and gas prone. Lacustrine shales, fluvio-deltaic coals/coaly shales and organic-rich marine shales generated light waxy oils and abundant gas of region. Proximal basins and environments more oil prone, more distal basins and environments more gas potential; intermediate basins and environments both oil and gas prone)

Doust, H. & R.A. Noble (2008)- Petroleum systems of Indonesia. Marine Petroleum Geol. 25, 2, p. 103-129.
(Four Petroleum System Types (PSTs) corresponding to main stages of geodynamic basin development (1) oil-prone Early Synrift Lacustrine in Eocene-Oligocene deeper parts of synrift grabens, (2) oil and gas-prone Late Synrift Transgressive Deltaic in shallower Oligocene- E Miocene portions of synrift grabens, (3) gas-prone Early Postrift Marine of E Miocene transgressive period, and (4) oil and gas-prone Late Postrift Regressive Deltaic of shallowest late Tertiary basin fills. Mixing of predominantly lacustrine to terrestrial charge has taken place. Grouped basins according to dominant PSTs and identified 'basin families', termed proximal, intermediate, distal, Borneo and E Indonesian, according to paleogeographic relationship to Sunda craton)

Doust, H. & H.S. Sumner (2007)- Petroleum systems in rift basins- a collective approach in Southeast Asian basins. Petroleum Geoscience 13, p. 127-144.
(Shell view of SE Asia Tertiary basins. Four types of petroleum systems, correlating with basin evolution stages (early and late synrift, early and late postrift). Petroleum system types characteristic environmentally-controlled source, reservoir and seal lithofacies which, in combination with structural trap style, determine hydrocarbon habitat. Variations in tectonostratigraphic evolution due to differences in paleogeographical position and proximity to late Tertiary collisions. This is reflected in volumes, field sizes and oil- gas ratios)

Dowling, L.M., C.J. Boreham, J.M. Hope, A.P. Murray & R.E. Summons (1995)- Carbon isotopic composition of hydrocarbons in ocean-transported bitumens from the coastline of Australia. Organic Geochem. 23, 8, p. 729-737.
(Bitumens stranding along coastlines of Northern Territory, W Australia, S Australia, Victoria and Tasmania with biomarker signatures similar to SE Asian oils. Comparison with C Sumatra Minas and Duri lacustrine oils shows very similar isotopic patterns to waxy bitumens from Australian coastline. Asphaltic bitumens from S Australian coastline lighter carbon isotopes)

George, S.C., H. Volk & M. Ahmed (2004)- Oil-bearing fluid inclusions: geochemical analysis and geological applications. Acta Petrologica Sinica 20, 6, p. 1319-1332.
(On fluid inclusion geochemistry, with examples from Timor Sea, etc., NW Australia)

Gibling, M.R. (1988)- Cenozoic lacustrine basins of Southeast Asia, their tectonic setting, depositional environment and hydrocarbon potential. In: A.G. Fleet, K. Kelts & M.R. Talbot (eds.) Lacustrine petroleum source rocks, Geol. Soc., London, Spec. Publ. 40, p. 341-351.
(Cenozoic strike-slip tectonism in SE Asia generated many short-lived, but deep basins. Formed ideal sites for lakes during Oligocene- Miocene early basinal history. Examples from N Thailand basins with lacustrine mudstone and coal with Type I, hydrogen-rich kerogen, with good hydrocarbon generation potential)

Gordon, T.L. (1985)- Talang Akar coals; Ardjuna subbasin oil source. Proc. 14th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 2, p. 91-120.

Grantham, P.J., J. Posthuma & A. Baak (1983)- Triterpanes in a number of Far-Eastern crude oils. In: M. Bjoroy et al. (eds.) Proc. Int. Meeting on Organic Geochemistry 1981, Wiley & Sons, New York, Advances in Organic Geochemistry 10, p. 675-683.
(First authors to suggest relation between uncommon triterpanes in crude oils from SE Asia and dammar (resinous material from Dipterocarpaceae angiosperm hardwood trees common in SE Asia))

Grunau, H.R. & U. Gruner (1978)- Source rocks and the origin of natural gas in the Far East. J. Petroleum Geol. 2, p. 3-56.
(Most source rocks of SE Asia, Australia have strong humic component and therefore large gas-generating capacity, so Far East largely a gas province. Most source rocks Paleocene- Miocene age. Source rock maturity and post-maturity in many cases reached in Neogene to Recent times. Retention of gas may have been inadequate in areas of strong Neogene folding (e.g. Sumatra, E Kalimantan, Burma Tertiary basins)

Hoffmann, C.F., A.S. MacKenzie, C.A. Lewis, J.R. Maxwell, J.L. Oudin, B. Durand & M. Vandenbroucke (1984)- A biological marker study of coals, shales and oils from the Mahakam Delta, Kalimantan, Indonesia. Chemical Geology 42, p. 1-23.
(Distributions of steroidal and triterpenoidal alkanes and aromatic hydrocarbons in oils, coals and shales from Mahakam Delta suggest high relative abundances of components of higher-plant origin, agreeing with Type III organic matter interpretation. Source for Handil oils must have present depth of at least 3000m)

Horsfield, B., K.L. Yordy & J.C. Crelling (1988)- Determining the petroleum-generating potential of coal using organic geochemistry and organic petrology. In: Proc. 13th Int. Meeting on Organic Geochemistry, Organic Geochem. 13, p. 121-129.
(Arjuna Basin of NW Java contains high-wax crude oil. Pyrolysis-gas chromatography shows potential precursors of long chain (waxy) paraffins in coals of Talang Akar formation, and are most abundant in those that are rich in 'matrix liptinite' (better expulsion potential than vitrinite-rich coals))

Howes, J.V.C. & S. Tisnawijaya (1995)- Indonesian petroleum systems, reserve additions and exploration efficiency. Proc. 24th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 1-17.

Imbus, S.W., B.J. Katz & T. Urwongse (1998)- Predicting CO2 occurrence on a regional scale: Southeast Asia example. Organic Geochem. 29, p. 325-345.
(In SE Asia gas fields CO2 may vary from <10% to 90% in same basin. Multiple possible origins for CO2, incl. from mantle, carbonate metamorphism, maturation of organic material, etc.). Tectonic setting, basement fault density, reservoir temperature and reservoir pressure are key elements controlling CO2 abundance)

Kang An & Yang Lei (2010)- Lacustrine source rock occurrence and its petroleum reservoir distribution of Paleogene fault basins in offshore China and Southeast Asia. Xinjiang Petroleum Geol. 2010, 4, p.
(Hydrocarbons generated from lacustrine source rocks in Paleogene rift basins of offshore China and SE Asia account for 95% and 48% of total petroleum resources in these areas. Two models of source rock distribution

(1) Bohai Bay basin model with widely distributed, thick, deep lacustrine shale; (2) Asri- C Sumatra basin model with rel. thin, shallow lacustrine shale of limited distribution)

Katz, B.J. (1991)- Controls on lacustrine source rock development for Indonesia. Proc. 20th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 587-619.
(Lacustrine source rocks >80% of Indonesia's known petroleum reserves. Nonmarine source systems not universally distributed. Factors favoring lacustrine source development: tectonic development of narrow basins, subsidence rates in excess of sedimentation rates, rainfall rates in excess of evaporation but insufficient to support growth of rain forests, lack of winter storms, and limited seasonality of surface temperatures)

Katz, B.J. (1995)- Biogenic gas- its formation and economic significance. Proc. 24th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 461-474.
(Significant proportion of global gas reserve-base not thermogenic but of bacterial origin. Several Indonesian basins, with high sedimentation rates, locally high TOC and rel. low T gradients, may be suitable for biogenic gas generation)

Katz, B.J. (1995)- A survey of rift basin source rocks. In: J.J. Lambiase (ed.) Hydrocarbon habitat of rift basins, Geol. Soc., London, Spec. Publ. 80, p. 213-240.
(Rift basins contain disproportionate amount of petroleum relative to their area and sediment volume, but not all rifts contain organic-rich deposits, nor are all organic-rich deposits volumetrically significant. Includes examples from C Sumatra, etc.)

Katz, B.J. (2001)- Gas geochemistry- a key to understanding formation and alteration processes. Proc. 28th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 789-802.
(Multiple gas formation mechanisms, reflected in bulk and isotope geochemistry; can be used to decipher gas accumulation history)

Katz, B.J. & B. Mertani (1989)- Central Sumatra- a geochemical paradox. Proc. 18th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 403-425.
(Crude oil data suggest four crude oil families in C Sumatra. Source rock data indicated only one effective oil source, Pematang Brown Shale. Facies variations in Brown Shale may explain differences in crude oils)

Katz, B.J., R.A. Royle & B. Mertani (1990)- Southeast Asian and Southwest Pacific coals contribution to the petroleum resource base. Proc. 19th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 299-329.
(Considerable variation in ability of coals to generate hydrocarbons. With exception may be of algal-dominated coals, coals generally do not contribute to petroleum resource base. Lacustrine source rocks account for 90% of petroleum resource base of Indonesia, 95% of China's)

Kelley, P.A., K.K. Bissada, B.H. Burda, L.W. Elrod & R.N. Pheifer (1985)- Petroleum generation potential of coals and organic rich deposits: significance in Tertiary coal rich basins. Proc. 14th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 2, p. 3-21.
(Contribution of coal to accumulated hydrocarbons controversial. Only alginite produces molecular fingerprint that resembles crude oil, hydrocarbons generated by vitrinite do not. Vitrinite generates minor quantities of hydrocarbons and is not viable oil source. Algae and bacteria probably represent basis for all crude oils)

Kewley, J. (1921)- The crude oils of Borneo. Petroleum Times, London, 5, p. 337-339.
(also in J. Inst. Petrol. Technologists 7, 37, p. 209-233)
((Plummer 1921 AAPG review): In Kutei region in E Borneo Miocene Pliocene deltaic deposits overlie glauconitic marls, limestones and marls of E Miocene and Eocene age. Oil originated in lower Miocene and Eocene marls and limestones and migrated upward, saturating delta deposits. Oil accumulated along Sanga Sanga fold (Sanga Sanga and Sambodja oil fields). Deeper oil rich in paraffin wax; oils from higher levels in or above coal beds poorer in paraffin and richer in aromatic and asphaltic constituents. In Miri field where coal is absent, oil also low in aromatic and asphaltic content. At Perlak in Sumatra where coal is also absent oils lower in aromatic and asphaltic constituents than oils of Moera Enim, Sumatra, where coal seams present)

Kjellgren, G.M. & H. Suguharto (1989)- Oil geochemistry: a clue to the hydrocarbon history and prospectivity of the Southeastern North Sumatra Basin, Indonesia. Proc. 18th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 363-385.
(Oils from Pertamina wells in N Sumatra basin suggest two oil sources: (1) E Oligocene synrift Bampo Fm (early generation, now overmature; oils mostly biodegraded) and (2) post-rift Late Oligocene- M Miocene Baong-Belumai Fms)

Leckie, A.J. & H.R. Woltjer (1935)- Het Helium-gehalte van aardgassen der petroleumbronnen. Handelingen 7e Nederl. Natuurwetenschappelijk Congres, Batavia 1935, p. 170-181.
('The Helium content of natural gases from the oil wells'. Analyses of 15 gases from Java, Sumatra, Borneo and sera. Highest He content in Bula field, Seram)

Liaw, K.K. (2019)- Coaly petroleum source rocks In Malaysia - is thepresent the key to the past? Berita Sedimentologi 42, p. 22-32.
(online at: www.iagi.or.id/fosi/files/2019/01/FOSI_BeritaSedimentologi_BS42_January2019.pdf)
(Except for Central Luconia, Malaysia's oil-producing regions (Malay, Sarawak and Sabah Basins) broadly similar petroleum systems with Neogene clastic reservoirs, hydrocarbons sourced mainly from Type III coaly source rocks. Low-lying forest peats often inundated by floods, and oil-prone (Type III/II) coals;raised peat domes, forming above seasonal flood levels result in gas-prone (Type III) coals)

Link, W. (1952)- Significance of oil and gas seeps in world exploration. American Assoc. Petrol. Geol. (AAPG) Bull. 36, 8, p. 1505-1549.
(General discussion of oil-gas seepage. Most common in young sediments that were folded, faulted and eroded and on basin margins. With 3 maps showing oil seep distribution on Sumatra (fig. 38), Borneo (fig. 39) and Java (fig. 40), based on information from Standard-Vacuum Oil Company)

Livsey, A.R., N. Duxbury & F. Richards (1992)- The geochemistry of Tertiary and Pre-Tertiary source rocks and associated oils in eastern Indonesia. Proc. 21st Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 707-761.
(Overview of E Indonesia source rocks. Main source rock ages Late Permian, Late Triassic (restricted marine oil-source in Buton, Seram, Timor, Buru), E-M Jurassic (coaly and marine facies in New Guinea), Miocene (Salawati, Sengkang basins))

Longley, I. (2005)- Topical tropical non-marine deep water deltaic charge systems in SE Asia. a model to explain why some are oily and some are not. Proc. 30th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 625-646.
(General Asia hydrocarbon source discussion, mainly dealing with Borneo Baram and Mahakam deltas)

MacGregor, D.S. (1994)- Coal-bearing strata as source rocks- a global overview. In: A.C.Scott & A.J. Fleet (eds.) Coal and coal-bearing strata as oil-prone source rocks? Geol. Soc. London Special Publ. 77, p. 107-116.
(Coal-bearing sequences are significant oil generators only in very specific and relatively uncommon settings. Coals primary or important secondary source facies in Australasia/ SE Asia. In other regions of world no

evidence they expelled major oil, but sourced significant amounts of gas. Liquid hydrocarbons restricted to two 'fairways'. (1) Tertiary angiosperm assemblages within 20° of Paleo-Equator and (2) Late Jurassic-Eocene gymnosperm assemblages formed on Australian and associated plates)

MacGregor, D.S. (1995)- The exploration significance of surface oil seepage: an Indonesian perspective. Proc. 24th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 97-109.
(Majority of Indonesian oil provinces with belt of seeps on basin edge. Relationship between seeps and reserves good on basin scale, but poor at sub-basin and field scale. Seeps in W Indonesia controlled by extent of Plio-Pleistocene structural inversion over oil-bearing portions of backarc basins. Less disturbed extensional fabric of C. Sumatra less seepage than inverted fabric of N and S Sumatran basins, despite higher oil reserves. Active seeps frequent over active reverse faults and eroded steep anticlinal crests. High success rate of wells near seeps, but most seeping fields shallow and small. In inverted areas, oil generation usually no longer active and surface oil shows represent destruction of oil pools. Larger fields generally basinward of seep belt)

MacGregor, D.S. (2018)- Physics and biology of biogenic gas plays: implications for SE Asia In: PEGSB SEAPEX Asia Pacific E&P Conference, London, 26p. *(Abstract + Presentation)*
(Surge in biogenic gas discoveries worldwide, particularly in deepwater settings. In SE Asia represented by Rakhine Basin, Myanmar. Also Terang-Sirasun (NE Java - Madura Straits), Niengo (N West Papua), Pandora (Gulf of Papua), etc.. Biogenic gas generation shut off at ~60-70° C.,)

Mann, A.L., N.S. Goodwin & S. Lowe (1987)- Geochemical characteristics of lacustrine source rocks: a combined palynologial/ molecular study of a Tertiary sequence from offshore China. Proc. 16th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 241-258.
(Study of Eocene-Miocene lacustrine source rocks from undisclosed well offshore China)

Marty, D.G. & J.E. Garcin (1987)- Presence de bacteries methanogenes methylotrophes dans les sediments profonds du detroit de Makassar (Indonesie). Oceanologica Acta 10, 2, p. 249-253.
(online at: http://archimer.ifremer.fr/doc/00109/22074/19716.pdf)
('Occurrence of methylotrophic methane-producing bacteria in deep-sea sediments from Makassar Strait (Indonesia)'. Competition between sulfate reducing and methane producing bacteria one of main factors controlling biogenic methane genesis in anoxic marine sediments. Methylotrophic methanogenic bacteria found in shallow marine sediments, and methanogenic bacteria able to produce methane from methylamines in sediments from oceanic trench at depth of 2000m in Makassar Strait)

McKirdy, D.M. & A. Horvath (1976)- Geochemistry and significance of coastal bitumen from southern and northern Australia, Australian Petrol. Explor. Assoc. (APEA) J. 16, p. 123-136.
(Bitumen strandingsin N Territory of Australia are paraffinic oils, probably from natural submarine oil seeps in Money Shoal Basin. Probably derived from Cretaceous or younger non-marine or deltaic source rocks (see also Summons et al. 1993))

Michels, R., N. Enjelvin-Raoult, E. Marcel, L. Mansuy, P. Faure & J.L. Oudin (2002)- Understanding of reservoir gas compositions in a natural case using stepwise semi-open artificial maturation. Marine Petroleum Geol. 19, 5, p. 589-599.
(Two types of variations with depth of d13C values of gases observed in multilayered gas fields in SE Asia (E Kalimantan?). In normally pressured zones steady increase of d13C values of methane with depth; in overpressured zones first decrease with depth, then regular trend. Experiments on pyrolysis of Mahakam Delta coal show closed pyrolysis carbon isotope trends very similar to high pressured reservoirs; normal pressured reservoirs follow values of semi-open pyrolysis. Gas distributions and d13C isotope composition may be explained in terms of degree of opening of system: high P reservoirs fairly closed systems, with in situ gas generation, normally pressured zones more open and subject to lateral migration)

Munir, N., S. Sanusi, S. Gunawan, T. Nugroho & M. Dwiantoro (2015)- Early screening tools to determine the hydrocarbon potential from unconventional coals and shales source rocks: organic petrology and geochemistry. Proc. Joint Conv. HAGI-IAGI-IAFMI-IATMI, Balikpapan, JCB2015-096, 12p.

(Organic petrology and geochemistry of lignite from Muara Enim Fm (S Sumatra), shales from Sangkarewang Fm (Ombilin Basin) and Brown Shale Fm (C Sumatra). All potential for unconventional oil and gas)

Murray, A.P., I.B. Sosrowidjojo, R. Alexander, R.I. Kagi, C.M. Norgate & R.E. Summons (1997)- Oleananes in oils and sediments: evidence of marine influence during early diagenesis? Geochimica Cosmochimica Acta 61, 6, p. 1261-1276.
(Oleananes derived from angiosperm plants. Abundance of oleananes in terrigenous oils and sediments may be sensitive to changes in early diagenetic conditions and need to be used with caution as age and source markers in fluvio-deltaic and lacustrine petroleum systems. Oleananes absent from base of Eocene coal seam affected by postdepositional seawater intrusion. In deltaic sediments from S Sumatra Basin, oleanane/hopane is strongly correlated with indicators of marine influence. Angiosperm-derived Miocene coal from Philippines, deposited under freshwater conditions, abundant aromatic oleanoids but no oleananes)

Murray, A.P., I.B. Sosrowidjojo, R. Alexander & R.E. Summons (1997)- Locating effective source rocks in deltaic petroleum systems; making better use of land-plant biomarkers. In: J.V.C. Howes & R.A. Noble (eds.) Proc. Int. Conf. Petroleum Systems of SE Asia and Australasia, Jakarta 1997, Indon. Petroleum Assoc. (IPA), p. 939-945.
(Distribution of oleananes and bicadinanes, land plant biomarkers in many SE Asian oils, can be used to better define maturity and depositional environment of effective source rocks)

Murray, A.P., R.E. Summons, C.J. Boreham & L.M. Dowling (1994)- Biomarker and n-alkane isotope profiles for Tertiary oils: relationship to depositional setting. Organic Geochem. 22, p. 521-542.
(Biomarker and n-alkane isotope profiles for Late Cretaceous/Tertiary oils from SE Asia, China, PNG, etc., interpreted with respect to six kinds of source rock depositional settings: fluvio-deltaic (S Sumatra, NW Java, NE Kalimantan, etc.), freshwater transitional, lacustrine (C Sumatra), saline lacustrine, marine deltaic and marine carbonate. Oleanane/hopane ratio may overestimate higher plant contribution to marine oils)

Murtrijito, N.A., F.M. Naibaho & W. Ashuri. (2014)- Shale gas: geological perspective of Baong Formation for future chances of North Sumatra Basin; compared to Fort Worth Basin in USA. Majalah Geologi Indonesia (IAGI) 28, 1, p. 41-49.
(online at: www.bgl.esdm.go.id/publication/index.php/dir/article_detail/719)
(Interbedded black shale and limestone of M Miocene Baong Fm in N Sumatra Basin similarities with Barnett Shale of Fort Worth Basin, therefore Baong Fm may also become commercial gas resource)

Abatzis (2014)- World-class Paleogene oil-prone source rocks from a cored lacustrine synrift succession, Bach Long Vi Island, Song Hong Basin, offshore northern Vietnam. J. Petroleum Geol. 37, 4, p. 373-389.
(Oil-prone source rocks in lacustrine syn-rift successions of inverted Bach Long Vi Graben exposed on Bach Long Vi island. Cored 500m dominated by lacustrine mudstones interbedded with gravity flow deposits. Mudstones thermally immature, eith sapropelic Type I and mixed Types I- III kerogen. Average TOC 2.88%, Hydrogen Index 566 mg HC/g TOC. Net-source rock thickness of ENRECA-3 well ~233 m)

Petersen, H.I., H.P. Nytoft, M.B.W. Fyhn, N.T. Dau, H.T. Huong, J.A. Bojesen-Koefoed & L.H. Nielsen (2012)- Oil and condensate types in Cenozoic basins Offshore Vietnam: composition and derivation. Proc. Int. Petrol. Techn. Conf. (IPTC), Bangkok 2012, 1, IPTC 14383, p. 612-621.
(Vietnamese shelf several petroleum-producing Cenozoic rift basins, including Song Hong, Cuu Long, Nam Con Son and Malay-Cho Thu basins. Cuu Long Basin is main oil-producing basin, with paraffinic oils from lacustrine source. Lacustrine oils also known from N margin of Song Hong Basin. Oil with coaly biomarker signature in the Nam Con Son Basin; also condensates from Song Hong Basin contain high proportions of higher land plant biomarkers. Oils from N margin of Malay Basin suggestive of coaly source)

Petersen, H.I., H.P. Nytoft & L.H. Nielsen (2004)- Characterisation of oil and potential source rocks in the northeastern Song Hong Basin, Vietnam: indications of a lacustrine-coal sourced petroleum system. Organic Geochem. 35, p. 493-515.
(Oil in B10-STB-1x well in NE Song Hong Basin, Vietnam, has typical lacustrine-coaly geochemical features. Presence of lacustrine source rocks in basin indicated by high-amplitude seismic reflectors in undrilled half-

grabens and outcrops of Oligocene immature mudstones and humic coals at Dong Ho (Type I kerogen, TOC 8-17%, HI >500) and on Bach Long Vi Island (TOC 2-7%, HI 200-700))

Petersen, H.I., Vu Tru, L.H. Nielsen, Nguyen A. Duc & H.P. Nytoft (2005)- Source rock properties of lacustrine mudstones and coals (Oligocene Dong Ho Formation), onshore Song Hong Basin (northern Vietnam). J. Petroleum Geol. 28, p. 19-38.
(Oligocene lacustrine mudstones and coals outcropping at N margin of mainly offshore Song Hong Basin include oil-prone potential source rocks. Organic material in mudstones mainly amorphous (Type I), up to 19.6.% TOC and Hydrogen Index values 436-572 mg HC/g TOC. Only 0.5 wt.% TOC required to saturate source rock to expulsion threshold. Coals and coaly mudstones dominated by huminite (Type III kerogen) and contain terrestrial-derived liptodetrinite. Coals generate at or before maturity of vitrinite 0.97%Ro)

Robinson, K.M. (1987)- An overview of source rocks and oils in Indonesia. Proc. 16th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 97-122.
(Indonesia source rocks lacustrine, fluvio-deltaic and marine. Lacustrine source most productive (most oil in C Sumatra, some Sunda Basin, possibly oil in W Natuna). Fluvial-deltaic source rocks sourced oil in majority of foreland/back-arc basins of W Indonesia. Marine source rocks in E Indonesia (Salawati, E Sulawesi). Pre-Tertiary (Permian/Jurassic) oil source in Bintuni and Bula (Seram) and possible source in E Sulawesi and Banggai-Sula. Lacustrine oils low-medium gravity, waxy, low sulfur and often high C30 4-methyl steranes. Marine oils low-medium gravity, low wax, medium-high sulfur oils and high C27-C29 diasteranes and steranes. Fluvio-deltaic oils from higher plants medium-high gravity, waxy, low sulfur and abundant C30 alkanes)

Saller, A., R. Lin & J. Dunham (2006)- Leaves in turbidite sands; the main source of oil and gas in the deep-water Kutei Basin, Indonesia. American Assoc. Petrol. Geol. (AAPG) Bull. 90, 10, p. 1585-1608.
(Gas-oil- condensate in Upper Miocene in deep-water Kutei Basin, off E Kalimantan, derivated from land-plant source material. Best source rocks are deep-water sandstones with coaly fragments, pieces of wood, resinite, and other coaly debris. Laminar coaly fragments are dominant, and were leaf fragments, carried into deep water by turbidity currents during lowstands of sea level. Kutei Basin deep-water shales contain mainly silt-size vitrinite grains with poor generative qualities. Liquids from leaves high wax contents)

(online at: http://espace.library.curtin.edu.au)
(22 oils and sediments analysed for biological marker compounds. Compounds typical of carbonate-rich source rocks identified. Sediments and oils from N Sumatra Basin contain very different biomarkers)

Subroto, E.A. (1990)- 30-Norhopane, biomarker baru penunjuk lingkungan karbonat: suatu studi geokimia petroleum terhadap sampel batuan dan minyak mentah. Proc. 19th Ann. Conv. Indon. Assoc. Geol. (IAGI), Bandung, 1, p. 230-241.
('30-Norhopane, a new biomarker as carbonate environment indicator: a study of petroleum geochemistry of rock and crude samples'. Study of rocks and oil samples from Seram and other countries identify C30 biomarker as typical of carbonate hydrocarbon source rocks)

Subroto, E.A., B.Y. Afriatno & P. Sumintadireja (2007)- Prediction of the biogenic gas occurrences in Indonesia based on studies in East Java and Tomori (Central Sulawesi). Jurnal Teknologi Mineral 14, 2, p. 115-124.
(online at: www.fttm.itb.ac.id/galeri/prediction.pdf)
(Some Indonesian gas fields with biogenic gas, characterized by dryness (>99% methane) and light carbon-isotopes (-61 to -67‰). One field producing biogenic gas in E Java Basin, probably derived from Plio-Pleistocene. Similar situation in Tomori, Sulawesi. Plio-Pleistocene sediments in Indonesia generally high sedimentation rates, low thermal gradients and high organic content, thus potential source for biogenic gas)

Subroto, E.A., R. Alexander & R.I. Kagi (1991)- 30-Norhopanes: their occurrence in sediments and crude oils. Chemical Geology 93, 179-192.
(Ratios of hopanes types geochemical biomarker in oils and sediments reflect sample maturity, with higher norhopanes in more mature samples. Incl. examples from Triassic oils from Seram and Buton asphalt)

Subroto, E.A., R. Alexander, U. Pranjoto & R.I. Kagi (1992)- The use of 30-Norhopane series, a novel carbonate biomarker, in source rock to crude oil correlation in the North Sumatra Basin, Indonesia. Proc. 21st Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 145-163.
(30-norhopanes as carbonate biomarker proposed recently. Three types of source rocks in N Sumatra Basin: shale, carbonaceous shale and calcareous shale. n-Alkanes and steranes can only be used to distinguish two

source types since shale and calcareous shale show similar characteristics. Recognition of three source types can only be observed using the hopane distribution. One crude oil can be correlated to calcareous shale and two crude oils are correlative to shale source rock. Crude oil of coaly shale type is not found during this study)

Subroto, E.A., A. Bachtiar, B. Priadi, R.P. Koesoemadinata & D. Noeradi (1998)- Could oleanoids, substances found abundantly in coaly sediments, be used as geochemical maturity indicator? A case study in the Kutai Basin. Proc. 27th Ann. Conv. Indon. Assoc. Geol. (IAGI), Yogyakarta, 1, p. 129-139.
(Oleanoid ratio OR1 correlates with vitrinite reflectance, and may be maturity indicator)

Subroto, E.A., D. Noeradi & B.Y. Afriatno (2009)- Geochemical identification of favorable basins for biogenic gas exploration in Indonesia. Proc. 33rd Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, IPA09-G-185, p. 405-415.
(Biogenic gas formed at T <75°C is dry (>95% methane) and isotopically light (<-55‰). May contribute >20% of global gas resources. Biogenic gas large component of gas produced from E Java. Other favorable sites for biogenic gas are basins with young sediments (Plio-Pleistocene), high sedimentation rates (>50 m/My) and low Temp (0-75°C))

Sudarmono, T. Suherman & B. Eza (1997)- Paleogene basin development in Sundaland and its role to the petroleum systems in Western Indonesia. In: J.V.C. Howes & R.A. Noble (eds.) Proc. Int. Conf. Petroleum Systems of SE Asia and Australasia, Jakarta, Indon. Petroleum Assoc. (IPA), p. 545-560.
(ARCO paper with Eo- Oligocene paleogeography maps based on Daly (1987) reconstructions. Syn-rift continental deposits followed by late rift marine incursion and fully marine facies during post-rift. Paleogene basins commonly complete petroleum systems with source, reservoirs and seals. Maturity only after Neogene deposition. Lacustrine source rocks during rifting; marine carbonaceous shales and coals during late rift to post-rift. Productive reservoirs mostly upper syn-rift or post-rift. E Java- E Kalimantan- W Sulawesi rifts older (Late Paleocene- E Eocene) than Sumatra- W Java- W Kalimantan systems (Late Eocene- E Oligocene)

(online at: http://ijog.bgl.esdm.go.id/index.php/IJOG/article/view/397/268)
(Nine oil seep samples from Lariang and Karama Basins, SW Sulawesi. Some biodegradation. High oleanane content interpreted as evidence for marine influence. Organic matter facies mixed allochthonous macerals from terrestrial higher plants, transported into basin from distal swamps and soils and some marine organic matter)

Suwarna, N., H. Panggabean, M.H. Hermiyanto & A.K. Permana (2007)- Characterization of unconventional fossil fuels of selected areas, in Sumatera and Kalimantan, using organic petrography and geochemistry. Proc. 31st Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, IPA07-G-079, 15p.
(Oil shale and coalbed methane studies in Sumatra and Borneo)

Sykes, R. & I. Cibaj (2010)- Peat biomass and early diagenetic controls on oil generation from Mahakam Delta coals, Kutei Basin: preliminary study of coals from the Jalan Baru section near Samarinda. Proc. 34th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, IPA10-G-105, 17p.
(Geochem study of 11 outcrop coal samples from M Miocene Balikpapan Group near Samarinda. Analysed coals have potential to expel oils ranging from borderline gas condensate to high-wax, paraffinic- naphthenic-aromatic oil. Non-volatile, paraffinic oil potential of Mahakam Delta coals controlled primarily by abundance of leaf- and cork-derived macerals. These macerals expected to be more abundant in thin, planar mire coals and coaly mudstones than in thicker, raised mire coals owing to better preservation potential of surface leaf biomass under higher groundwater levels in planar mires)

Tahir, N.T., H.M. Abd. Rahim, Tay Joo Hui, Tan Hock Seng, M.F. Fadzil & M.R. Abas (2009)- Distribution and sources of hydrocarbons in lagoon sediments of Setiu Wetland, Terengganu, Malaysia. Aquatic Ecosystem Health and Management 12, 4, p. 344-349.
(Hydrocarbon compounds in surface sediment of Setiu Wetland analysed and characterized using GCMS. Terrestrial plants input (epicuticular plant waxes) are dominant contributor of organic compounds in the sediments with a minor input from marine phytoplankton (algae) as well as bacteria)

Teerman, S.C. & R.J. Hwang (1989)- Evaluation of the source rock potential of Sumatran coals by artificial maturation of coal. Proc. 18th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, p. 469-489.
(Hydrous pyrolysis experiments on Miocene Muara Enim Fm lignite from Bukit Asam, S Sumatra. Lignite is liptinite-rich (32% of total macerals); resinite is the most abundant liptinite maceral (13.7%). Rock Eva1 Hydrogen Index values of 483 mg HC/g OC. Significant amounts of liquid hydrocarbons assimilated by vitrinitic matrix of coal prior to expulsion, making vitrinite-rich coals poor oil source rocks. Only liptinite-rich coals (>15-20% of total macerals) appear capable of generating significant amounts of liquid hydrocarbons but expelled product will probably be low. Most Sumatran coals not liptinite-rich (typically 5-10%))

Teerman, S.C., R.J. Hwang, Y.C. Tang, B. Mertani, M. Stauffer & T.T. Ta (1994)- Geochemical evaluation of the liquid hydrocarbon potential of "marginal source rocks"- application to Indonesian basins. Proc. 23rd Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 457-478.
(Expulsion efficiency is critical factor in potential of marginal source rocks to provide adequate hydrocarbon charge. Expulsion efficiency in marginal source rocks highly variable due to amount of hydrocarbon generation and adsorptive capacity of certain organic matter assemblages. Numerous examples of marginal source rocks in Indonesian region. With case study of Telisa Fm in Sumatra.)

(>200 oil analyses. W Indonesia 2 main petroleum systems: Tertiary lacustrine and Tertiary terrigenous, with additional marine petroleum system in N Sumatra and E Natuna. E Indonesia 3 main systems: Tertiary marine carbonate, Mesozoic marine carbonate and Mesozoic marine siliciclastic)

Thompson, M., C. Remington, J. Purnomo & D. MacGregor (1991)- Detection of liquid hydrocarbon seepage in Indonesian offshore frontier basins using Airborne Laser Fluorosensor (ALF); the results of a Pertamina/ BP joint study. Proc. 20th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, p. 663-689.
(ALF surveys over Sumatra Forearc, Java Forearc, Billiton Basin, Salayar, Spermonde, S and N Makassar, Bone, Gorontalo and Halmahera Basins. Hydrocarbons seeping from all basins except Java forearcs, though further analysis is required. Areas of greatest interest are Billiton, S Bone and S Makassar basins)

Thompson, S., B.S. Cooper & P.C. Barnard (1994)- Some examples and possible explanations for oil generation from coals and coaly sequences. In: A.C. Scott & A.J. Fleet (eds.) Coal and coal-bearing strata as oil-prone source rocks?, Geol. Soc. London, Spec. Publ. 77, p. 119-137.
(Coals and associated shales important oil source rocks in some deltaic environments. Formation of hydrogen-rich kerogen either by concentration of plant cuticles and spores after reworking of delta top freshwater peats, or by accumulation of delta margin peats under saline conditions. Examples include Oligo-Miocene Talang Akar Fm of S Sumatra-NW Java (perhydrous vitrinite source of isotopically light waxy oils with biomarkers from tree resins). Waxy oils also produced in Sunda Basin (derived from algal kerogen in older, lacustrine Banuwati Fm shales (low contents of land plant biomarkers and heavier carbon isotopic signature))

Thompson, S., R.J. Morley, P.C. Barnard & B.S. Cooper (1985)- Facies recognition of some Tertiary coals applied to prediction of oil source rock occurrence. Marine Petroleum Geol. 2, 4, p. 288-297.
(Coals are oil source rocks in many Tertiary basins of SE Asia. Precursors of these hydrogen-rich and oxygen-poor coals are coastal plain peats in everwet tropical climate. Distribution, petrography and chemistry of coaly Miocene source rocks present in Kutai Basin described)

Todd, S.P., M.E. Dunn & A.J.G. Barwise (1997)- Characterizing petroleum charge systems in the Tertiary of SE Asia. In: A.J. Fraser, S.J. Matthews & R.W. Murphy (eds.) Petroleum Geology of Southeast Asia, Geol. Soc., London, Spec. Publ. 126, p. 25-47.
(Most SE Asian Tertiary petroleum from paralic (higher land plant) source, although larger proportion of oil from lacustrine algal sources. Lacustrine sources mainly in Paleogene syn-rift lakes, paralic coals and coaly mudrocks in Miocene post-rift. Oil-prone source rocks preferentially paralic between lower coastal plain and lower estuary/delta front facies, perhaps involving mangrove system. Younger plays more gas prone. Significance of biogenic gas poorly understood. Vertical migration common; lateral migration restricted to ~20 km or less from kitchen)

Esterle, J.S. & J.L. Ferm (1994)- Spatial variability in modern tropical peat deposits from Sarawak, Malaysia, and Sumatra, Indonesia. Int. J. Coal Geology 26, p. 1-41.
(Study of two Recent (<5,000 yrs) domed peat deposits at Baram River (Sarawak) and Jambi area (Sumatra), examined as modern analogues for coal. Both in microtidal alluvial-deltaic plain settings, similar vegetation. One deposit convex, mature dome, rising 10m above river level; the other is low-gradient dome, rising only x m above river level but with concave base up to 6m below. Both deposits eroded by adjacent rivers)

Fatimah (2008)- Potensi Batubara bawah permukaan di Indonesia. Proc. 37th Ann. Conv. Indon. Assoc. Geol. (IAGI), Bandung, 1, p. 501-512.
(Assessment of potential volumes of deep-seated coal in Sumatra and Kalimantan)

Flores, R.M. & Hadiyanto (2006)- Patterns of Sumatran domed peatlands; from alluvial to coastal settings. Geol. Soc. America (GSA), 2006 Ann. Mtg., Abstracts with Programs 38, 7, p. 233. *(Abstract only)*
(Sumatran rain-fed and domed (ombrogenous) mires used as models for thick coal deposits worldwide. Kumpeh and Dendang peatlands between anastomosing Batang Hari and Kumpeh Rivers domed topography despite meander channels and tributaries forming re-entrants into peatlands and flood-plain levee sediments. Resulting peat deposits small area (240-540 km2), discontinuous, lenticular, <9 m thick. Endapan domed to flat peatland from edge of Batang Hari and Kumpeh Rivers to coast, is blanket-like (4000 km2) peat deposit, >11m thick. Raised peatlands along rivers reflect buildup of flood sediments that sustained robust vegetation, which in turn, accumulated raised peat (<9 m) that reduced extent of flooding. Flat coastal peatlands (Endapan) reflect peat accumulation (>11m) from stunted vegetation removed from flood-sustaining nutrients)

Friederich, M., J. Esterle, T. Moore & C. Nas (2009)- Variations in the sedimentological characteristics of Tertiary coals in SE Asia; and climatic influences on Tertiary coals and modern peats. In: Variations in fluvial-deltaic and coastal reservoirs deposited in tropical environments, AAPG Hedberg Conf., Jakarta 2009, 6p. *(Extended abstract)*

(Indonesia economic coal deposits mainly of Eocene and Miocene-Pliocene age and mainly in Kalimantan and Sumatra. Formed from peat deposits in equatorial paleoclimate. Some peats domed peats, which grew above normal water tables in climate of year-round rainfall, are low in ash and sulphur and locally thick (Miocene coals). Eocene coals typically thinner, with higher contents of ash and sulphur. Eocene coals formed mainly in extensional tectonic settings. Miocene-Pliocene coals in range of tectonic settings)

Friederich, M.C., G. Liu, R.P. Langford, C. Nas & B. Ratanasthien (2000)- Coal in Tertiary rift systems in Southeast Asia. In: Proc. Southeast Asia Coal Geology Conference, Bandung 2000, p. 33-43.

Friederich, M.C., T.A. Moore & R.M. Flores (2016)- A regional review and new insights into SE Asian Cenozoic coal-bearing sediments: why does Indonesia have such extensive coal deposits? Int. J. Coal Geology 166, p. 2-35.
(SE Asia Cenozoic coal-bearing basins grouped in five regions: N Sundaland, S Sundaland, Philippines, W Myanmar and E Indonesia; first three discussed here. Most significant coal deposits of SE Asia in Neogene of S Sundaland (Borneo, Sumatra), over extensive coastal plains in regressive setting. Coal deposits of N Sundaland (i.e. SE Asian continental) in small disconnected non-marine grabens, and are areally restricted. S Sundaland resided mainly within ± 10° of equator, with paleoclimate conducive to ever-wet conditions. N Sundaland resided >10°N of equator, probably monsoonal with annual dry periods. Etc.)

Hope, G., U. Chokkalingam & S. Anwar (2005)- The stratigraphy and fire history of the Kutai Peatlands, Kalimantan, Indonesia. Quaternary Research 64, p. 407-417.
(Equatorial peatlands of Kutai lowland generally 4-10m thick, but some sections >16m thick. Deposition of peat started ~8000 yrs ago after flooding of basin by Mahakam River. Earliest vegetation is Pandanus swamp which grades upwards to dipterocarp-dominated swamp forest. Peatland expanded laterally and rivers maintained narrow levee-channels through swamp. Fires of 1982 and 1997 burnt up to 85% of vegetation)

Horkel, A. (1990)- On the plate tectonic setting of the coal deposits of Indonesia and the Philippines. Mitteilungen Osterreichischen Geol. Gesellschaft 82 (1989), p. 119-133.
(online at: http://geologie.or.at/index.php/downloads2/category/7-archiv-mitteilungen)
Geodynamic evolution of SE Asian archipelago controls development of Tertiary sedimentary basins that contain coal deposits of Indonesia and Philippines. Plate-tectonic setting and associated geothermal gradients and tectonic stress are more relevant for quality and rank of Tertiary coals than age. With brief discussions of coal in Sumatra and E Kalimantan)

Hutton, A., B. Daulay, Herudiyanto, C. Nas, A. Pujobroto and H. Sutarwan (1994)- Liptinite in Indonesian Tertiary coals. Energy Fuels 8, 6, p. 1469-1477.
(Indonesian Tertiary coals similar compositions with vitrinite dominant maceral group. Most coals abundant secondary liptinite, especially exsudatinite but also fluorinite. Association of exsudatinite with oil suggests it is an indicator of early stage oil generation, and probably intermediate product in pathway vitrinite/ liptinite to oil. Where exsudatinite present in other rocks it should be termed bitumen)

(Review of 'impurities' in tin ore concentrates from smelters in W Malay Peninsula, SW Thailand and Bangka-Belitung, Indonesia. Tin concentrate generally of cassiterite with 70-75% Sn content)

Hutchison, C.S. (1988)- The tin metallogenic provinces of S.E. Asia and China: a Gondwanaland inheritance. In: C.S. Hutchison (ed.) Geology of tin deposits in Asia and the Pacific, Selected papers from Int. Symp. Geology of tin deposits, Nanning, China, 1984, Springer Verlag, p. 225-234.
(SE Asia is composite of stable continental blocks which rifted from N margin of Australia. Tin was carried in continental infrastructure of these blocks, which are all of Gondwanaland ancestry. Tectonic events which have greatest continental crustal involvement are most important in mobilizing tin into economic concentrations. Main metallogenic events are Malayan-type collisions between two continental blocks, resulting in crustal thickening and S-type granite batholiths: (1) Mesozoic belt formed by collision of Sinoburmalaya, Burma Plate, Qantang-Tangla, and Lhasa-Gandise blocks with E Asian Continent, (2) Caledonian E China belt)

Hutchison, C.S. (2009)- Mineral deposits. In: C.S. Hutchison & D.N.K. Tan (eds.) Geology of Peninsular Malaysia, University of Malaya and Geol. Soc. Malaysia, Kuala Lumpur, p. 331-364.

Hutchison, C.S. & K.R. Chakraborty (1979)- Tin: a mantle or crustal source? In: C.H. Yeap (ed.) Int. Symp. Geology of tin deposits, Kuala Lumpur 1978, Bull. Geol. Soc. Malaysia 11, p. 71-79.

(online at: https://www2.uibk.ac.at/downloads/oegg/Band_56_2_679_682.pdf)
(Obituary of Prof. T. Klompe, petroleum geologist with NKPM/ Stanvac from 1929-1942, prisoner of war from 1942-1945. Professor of geology at University of Indonesia (now ITB), Bandung from 1948-1958, and at Chulangkorn University, Bangkok, from 1958-1962)

Katili, J.A. (1979)- Geological and geophysical research in Southeast Asia: the state of the art. The Kuroshio IV, Proc. 4th Coop. Stud. Kuroshio Adjac. Reg. Symp., Tokyo, 14p. *(also in Katili 1985- Advancement of geoscience in the Indonesian region, p. 135-148)*

Katili, J.A. & H.M.S. Hartono (1979)- Van Bemmelenô contributions to the growth of geotectonics and the present state of earth-science research in Indonesia. In: W.J.M. van der Linden (ed.) Fixism, mobilism or relativism: Van Bemmelenô search for harmony, Geologie en Mijnbouw 58, 2, p. 107-116.
(online at: https://drive.google.com/file/d/0B7j8bPm9Cse0dTZKckNEU01sMEE/view)
(Undation theory launched in Indonesia by Van Bemmelen had great impact on development of earth sciences. First envisaged as fixistic concept, theory was later developed into mobilistic one which accommodates continental drift and sea-floor spreading hypothesis, but instead of accepting theory of extensive rigid plates it utilised rheological approach for island arcs. Geotectonic evolution of Indonesia is presented in this paper)

Kemmerling, G.L.L. (1927)- In Memoriam Dr. R.D.M. Verbeek. De Mijningenieur 7, 5, p. 79-80.
(Brief obituary of R.D.M. Verbeek, who died at age 81 on May 1927. After 33-year career of field surveys with Bureau of Mines of the Netherlands Indies Verbeek continued to be active in geology for 25 years)

Kemmerling, G.L.L. (1929)- In Memoriam Dr. P.F. Hubrecht. Jaarboek Geologisch-Mijnbouwkundig Genootschap Nederland Kol. 1929, 5p.

(Review of life and scientific career of famous Indonesian paleontologist Tan Sin Hok (1902-1945))

Murphy, R.W. (ed.) (1999)- The silver years, twenty five years of SEAPEX. SE Asia Petrol. Soc., Singapore, p. 1-119.
(Collection of anecdotal papers on SE Asia exploration in 1960's and 1970's)

Nagtegaal, P.J.C. (1989)- A century of petroleum exploration in Sarawak and Sabah. Asean Council on Petroleum, p. 29-36.

Nakano, T. (1970)- Some prevailing trends of the historical development of geosciences in the Far East. Geoforum 1, 3, p. 63-80.
(Brief review of historical development of geosciences in Far East, based mainly on published data in region. Mainly about Japan, with rel. little on Indonesia)

Nash, J.M.W. (1930)- De Opsporingsdienst, de geologische dienst van Nederlandsch-Indie, en zijn laboratorium. De Mijningenieur, 11, 1, p. 6-18.
(Overview of work and construction of new building of the Geological Survey of the Netherlands Indies in Bandung in 1929)

Nieuwenhuys, R. & F. Jaquet (1980)- Javaôs onuitputtelijke natuur. Reisverhalen, tekeningen en fotografieen van Franz Wilhelm Junghuhn. A.W. Sijthoff, Alphen aan den Rijn, p. 1-150.
('Java's inexhaustible nature; travels, drawings and photographs of F.W. Junghuhn. Popular overview)

Neumann van Padang, M. (1950)- Dertig jaren vulkanologisch onderzoek in Indonesie. Tijdschrift Kon. Nederlands Aardrijkskundig Genootschap 68, p. 541-565.
('Thirty years of volcanological research in Indonesia'. History of Bandung Volcanological Survey 1920-1950, founded after the 1919 catastrophic eruption of Kelud volcano, E Java)

Nieuwenkamp, W. (1967)- Herdenking van Felix Andries Vening Meinesz (30 juli 1887-10 augustus 1966). Jaarboek Royal Netherlands Academy of Arts and Sciences (KNAW) 1966-1967, Amsterdam, p. 364-370.
(online at: http://www.dwc.knaw.nl/DL/levensberichten/PE00003471.pdf)
(Obituary of well-known geophysicist F.A. Vening Meinesz, known mainly for marine marine gravity surveys between 1923-1939 in navy submarines across the world. Discovered long belts of strongly negative gravity in Netherlands Indies, interpreted as zones of 'crustal downbuckling' (now tied to subduction trenches))

Okker, F., L. Ouwehand & A. Vrolijk (2016)- Gerret Pieter Rouffaer (1860-1928), De laatste Indische ontdekkingsreiziger. Universiteit Leiden, p. 1-94.
(online at: http://hdl.handle.net/1887.1/item:1843477)
(Summary of the life of G.P. Rouffaer,'the last explorer of the Netherlands Indies'. Leader of the New Guinea Expedition of 1905, etc.)

Oppenoorth, W.F.F. (1926)- Vademecum voor het personeel bij den Dienst van den Mijnbouw- Mijnbouwkundig-geologische kaarteeringen meer in ót bijzonder die van aardolieterreinen. Weltevreden, p. 1-194.
(online at: https://resolver.kb.nl/resolve?urn=MMKB21:036098000:pdf
(Netherlands East Indies Geological Survey manual, describing methods and standards for surface mapping of oil field terrains)

Oppenoorth, W.F.F. (1930)- Necrologie van Aug. Tobler. De Mijningenieur 11, p. 2-4.
(Obituary of Swiss geologist and paleontologist August Tobler, known a.o. for early 1900's Sumatra geological mapping surveys)

Owen, E.W. (1975)- From the Far East to the North Sea, 1921-1970, Part I. The islands of Australasia. In: Trek of the oil finders: a history of exploration for petroleum, American Assoc. Petrol. Geol. (AAPG), Mem. 6, p. 1491-1505.
(Brief review of oil exploration and production in Indonesia and adjacent areas from 1920's- 1960's)

Petroeschevsky, W.A. & T.H.F. Klompe (1950)- Het vulkanologisch onderzoek in Indonesia. In: Een eeuw natuurwetenschap in Indonesia 1850-1950, Gedenkboek Kon. Natuurkundige Vereeniging, Chronica Naturae 106, 5, Vorkink, Bandung, p. 51-70.
(History of volcanological investigations in Indonesia, with listings of 130 active volcanoes and years of eruptions)

Petroeschevsky, W.A. & T.H.F. Klompe (1951)- Volcanological investigations in Indonesia. O.S.R. (Organization Scientific Research in Indonesia) Publ. 23, p.

Piatkowski, J. (1962)- Josef Zwierzycki uczony i czlowiek (1888-1961). Annales Soc. Geol. Pologne 32, 4, p. 659-667. *(in Polish and French)*
(online at: https://geojournals.pgi.gov.pl/asgp/article/download/11381/9869)
('Josef Zwierzycki, scholar and man (1888-1961)'.)

Plochinger, B. (1971)- Rudolf A.J. Osberger. Mitteilungen Geol. Gesellschaft Wien 64, p. 243-246.
(online at: https://www.zobodat.at/biografien/Osberger_Rudolf_MittGeolGes_064_243-246.pdf)
(Obituary of Austrian geologist Rudolf Osberger (1924-1972). Worked as teaching assistant/ researcher at University of Indonesia (now ITB) in Bandung from 1952 until March 1955, specializing in Tertiary corals. From March 1955-late 1966 with Billiton tin company, then with UN in New York. Published several key papers in both fields)

Polak, B. (1941)- Eugene Dubois, in memoriam. Eysden, 28 Januari 1858- Haarlem, December 1940. Natuurkundig Tijdschrift Nederlandsch-Indie 101, 4, p. 88-95.

Posthumus, O. (1927)- Honderd jaar palaeobotanisch onderzoek en over de toekomst ervan in Nederlandsch-Indie. De Mijningenieur 1927, 3, 24p.
('One hundred years of paleobotanical research and its future in the Netherlands Indies')

Poulgrain, G. (1999)- Delaying the ódiscoveryô of oil in West New Guinea. J. Pacific History 34, 2, p. 205-218.
(A fantasy story on how NNGPM was concealing a major oilfield discovery in W Papua around 1962)

Prijosoesilo, P., Y. Sunarya & A. Wahab (1993)- Recent progress of geological investigations in Indonesia. J. Southeast Asian Earth Sci. 8, pp. 5-23.

Poeradisastra, R. & B. Haryanto (2016)- Soetaryo Sigit membangun mertambangan untuk kemakmuran Indonesia. Gramedia, Jakarta, p. 1-703.
('Soetaryo Sigit builds mining for the prosperity of Indonesia'. Biography of S. Sigit, first graduate of UI Geology Department in Bandung (later ITB) in 1956. Became Director General of Mining and was influential in the development of the mining industry in Indonesia)

Pulle, A.A. (1940)- Overzicht van de lotgevallen en de werkzaamheden van de maatschappij in de eerste halve eeuw van haar bestaan. Maatschappij ter Bevordering van het Natuurkundig onderzoek de Nederlandsche kolonien, Bull. 99, Brill, Leiden, p. 1-84.
('Overview of the events and the work of the society in the first half century of its existence'. Review of activities and results of expeditions sponsored by 'Society for the Promotion of Natural history research the Dutch colonies', including the Molengraaff/ Nieuwenhuis C Borneo expedition in 1893-1895, Siboga oceanographic expedition in 1899-1900, the North New Guinea expedition in 1903 (Wichmann), three South New Guinea expeditions in 1907 (Lorentz), 1909-1910 (Lorentz) and 1912-1913 (Fransschen Herderschee), the Timor expedition in 1912 (Molengraaff), the Snellius Expedition, etc.)

Purbo-Hadiwidjojo, M. M. (1971)- The status of engineering geology in Indonesia: 1970. Bull. Int. Assoc. Engineering Geol. 4, p. 33-41.

Pyenson, L. (1989)- Empire of reason. Exact sciences in Indonesia 1840-1940. Brillôs studies in Intellectual History 13, Brill, Leiden, p. 1-194.
(Analysis of science research in Dutch East Indies by Canadian historian, observing that 'in no other European colony were scientific standards higher or accomplishments more significant than on Java')

Raffles, T.S. (1817)- The history of Java. Black, Parbury and Allen, and John Murray, London, vol. 1, p. 1-536.
(online at: http://books.google.com/books/)
(Early general description of Java, with some geological observations in vol. 1. With introductory chapter on geography)

Raffles, T.S. (1828)- On the tin of the Island of Banka. Trans. Royal Geol. Soc. Cornwall 3, p. 247-255.
(Brief posthumous publication of history of production of tin on Bangka, prices, tin placer deposits and distribution of tin. Probably written primarily by Thomas Horsfield. Tin on Bangka probably discoverd a century age (1720s?). Exploited mainly by Chinese miners under monopoly of Sultan of Palembang until 1811 and sold to Dutch, then to China. Tin found in alluvial deposits, 3-40' below surface)

Raven, T. (1946)- In memoriam Prof. Dr. L.M.R. Rutten. Tijdschrift Kon. Nederlands Aardrijkskundig Genootschap 63, 5p.

Reed, P.M. (1958)- Standard Oil in Indonesia, 1898-1928. Business History Review 32, 3, p. 311-337.
(Dutch Mining law of 1899 blocked foreign companies like American giant Standard Oil from getting access to oil deposits of Indonesia. In 1912 Nederlandsche Koloniale Petroleum Maatschappij (NKPM; later operating as Stanvac), a Dutch-registered subsidiary of Standard Oil and managed by Dutch personnel, was founded and allowed to legally operate. It acquired interests in existing concessions in NE Java and S Sumatra. Only after 1928 NKPM was granted concessions directly from the government)

Reinhard, M. (1959) Nachruf auf Dr. Walter Hotz, gest. 14. 8. 1958. Verhandlungen Naturforschenden Gesellschaft Basel 69, 2, p..
(Obituary of Dr. Walter Hotz, Swiss geologist born in 1884 in Basel. Graduated under C. Schmidt in Basel in 1908. Worked for NKPM in Borneo from 1910, later in East Java around 1912-1914 and Sulawesi. Joined L. Rutten on Seram Expedition in 1918-1919.. Died in Solduno in 1958)

Reinwardt, C.G.C. & W.H. de Vriese (1858)- Reis naar het Oostelijk gedeelte van den Indischen Archipel in het jaar 1821, uit zijne nagelaten aantekeningen opgesteld. Frederik Muller, Amsterdam, p. 1-646.
(online at: https://resolver.kb.nl/resolve?urn=MMKIT03:000187285:pdf)
(Report of journey of naturalist/ botanist Reinwardt to eastern part of Indies Archipelago in 1821. Published posthumously)

Renaud, G.P.A. (1922)- Levensbericht van den mijningenieur Hubertus Menten. Jaarboek Mijnwezen Nederlandsch Oost-Indie 59 (1920), Verhandelingen I, p. 1-6.
(Obituary of J.H. Menten, mining engineer at Dienst van het Mijnwezen from 1861-1882. Followed by successful career in private enterprise (coal exploitation, pioneering oil exploration in East Kalimantan))

Reumer, J. (2003)- Paul Sondaar (1934-2003): man van paarden en eilanden. Cranium 20,1, p. 3-4.
(online at: http://natuurtijdschriften.nl/download?type=document;docid=523493)
(Memoriam of Dr. Paul Sondaar, mammal paleontologist from University of Utrecht, with numerous contributions to Pleistocene 'island faunas' of Java, Sulawesi and Flores and their migration histories)

Reumer, J.W. F. & J. De Vos (1999)- Short biography and a bibliography of Paul Y. Sondaar. In: J.W.F. Reumer & J. de Vos (eds.) Elephants have a snorkel!, Papers in honor of Paul Y. Sondaar, DEINSEA 7, p. 3-19.

Rochussen, H. (1865)- Levensberigt Dr. F.W. Junghuhn. Natuurkundig Tijdschrift Nederlandsch-Indie 28, 6, p. 342-356.

(Obituary of German naturalist F. Junghuhn. Born 1812, arriving as health officer in Netherlands Indies in 1835. Traversed Java for 13 years and climbed all volcanoes. Wrote his famous book Java geography and flora in 1848-1849. Died in Lembang in 1864)

Rueb, P. (1991)- Une mine d'or a Sumatra. Technologie saxonne et methods indigenes au XVIIe siecle. Archipel 41, p. 13-32.
(online at: https://www.persee.fr/docAsPDF/arch_0044-8613_1991_num_41_1_2708.pdf)
('A gold mine on Sumatra: Saxon technology and indigenous methods in the 17th century'. On exploitation of Salida gold mine, W Sumatra, by VOC/ Dutch East Indies Company)

Rumphius, G.E. (1705)- DôAmboinsche Rariteitkamer, behelzende eene beschryvinge van allerhande zoo weeke als harde schaalvischen, te weeten raare kreeften en diergelyke zeedieren, als mede allerhande hoorntjes en schulpen, die die men in dôAmboinsche Zee vindt: daar benevens zommige mineraalen, gesteenten, en soorten van aarde, die in dôAmboinsche en zommige omleggende eilanden gevonden worden. Francois Halma, Amsterdam, 340 + 43p.
(online at: https://archive.org/details/DAmboinscheRari00Rump/page/n39)
('The Ambonese curiosity cabinet, containg a description of all sorts of soft and hard-shelled molluscs, strange lobsters and related sea animals, as well as all sorts of snails and shells that are found in the Sea of Ambon, as well as some minerals, rocks and kinds of earth that are found on Ambon and surrounding islands'. Classic description of marine fauna, geology and mineralogy of Moluccan islands by Rumphius, merchant of Dutch East-India Company (VOC), stationed on Ambon islands from 1653-1702. Includes first descriptions of geodes and Jurassic? belemnites from Taliabu, Sula islands, described as 'stone fingers, like Belemnites' (p. 253-254))

Rumphius, G.E. (1705/ 1999)- The Ambonese curiosity cabinet. Yale University Press, New Haven, p. 1-567.
(Annotated English translation by E.M. Beekman of 1705 Dutch original of classic Ambon/ Moluccas natural history book)

Rutten, L. (1917)- De wenschelijkheid van eenen geologischen dienst in Nederlandsch-Indie. Koloniale Studien 1, p. 299-323.
('The desirability of a geological survey in Netherlands Indies'. Argues for creation of separate geological survey organization for detailed geologic mapping of Java, with the 'Mijnwezen' organization continuing to find and evaluate commercial mineral deposits across the entire archipelago

Rutten, L.M.R. (1923)- Development of geological knowledge in the Dutch East Indies. In: The history and present state of scientific research in the Dutch East Indies, Kon. Akademie Wetenschappen, Amsterdam, De Bussy, p. 1-21.
(Brief review of history of geological work between ~1850-1920)

Rutten, L.M.R. (1928)- Arthur Wichmann. Zeitschrift Vulkanologie 1928, 11, p. 153-162.
(online at: https://dspace.library.uu.nl/handle/1874/298341)
(Obituary of A. Wichmann, who died in 1927. First professor of geology at University of Utrecht from 1879-1921, who participated in two geographic expeditions to East Indonesia and New Guinea in 1899 and 1903)

Rutten, L.M.R. (ed.) (1929)- Science in the Netherlands East Indies. Fourth Pacific Science Congress, Java 1929, Kon. Akademie Wetenschappen, Amsterdam, p. 1-432.

Rutten, L.M.R. (1932)- De beteekenis van de Opsporingsdienst (Geologische Dienst) van den Dienst van den Mijnbouw in Nederl.-Indie in verband met geruchten over krasse bezuinigingen. De Indische Mercuur 55, 20, p. 297-298.
(online at: https://resolver.kb.nl/resolve?urn=MMUBL09:001050021:pdf)
'The significance of the Geological Survey, with regard to rumors of significant budget cuts'. Rutten emphasizes importance of Bandung geological survey work. Suggests to shift more staff time to analysis of previously collected field observations and rocks in Bandung instead of expensive new field expeditions, to achieve

spending reductions without staff reduction (appeal not followed: geologists/engineers reduced from 88 in 1931 to 41-47 in 1935; Sumatra mapping completely stopped; publications reduced to virtually zero; JTvG))

Rutten, L.M.R. (1938)- De nooden van de Geologische Dienst in Nederlandsch-Indie. De Indische Mercuur, 20 Juli 1938, p. 3-18.
('The needs of the geological survey in Netherlands Indies'. Regrets the draconian budget cuts at Bandung geological survey between 1931- 1938. Recommends additional efforts of geological survey work, resume Sumatra mapping and work in E Indonesia. See also reply by survey director Koolhoven (1939))

Rutten, L.M.R. (1938)-De nooden van de Geologische Dienst in Nederlandsch- Indie. De Ingenieur in Nederlandsch-Indie 5, 11, p. 159-164.
(similar to Rutten (1938) above)

Rutten, L.M.R. (1943)- Levensbericht van Johann Karl Ludwig Martin, 1851-1942. Jaarboek Nederl. Akademie Wetenschappen, Amsterdam, 1942-1943, p. 210-218.
(Obituary of K. Martin, the 'Linnaeus of Java', geology-paleontology professor at Leiden University from 1877-1921)

Rutten, M.G. (1945)- Herdenking: Dr. P.M. Roggeveen, Dr. P.J. Pypers, Dr. L.W.J. Vermunt, D. van Eek. Geologie en Mijnbouw 7, p. 25-26.
(Commemoration of four Dutch geologists/ paleontologists from University of Utrecht, who died in Indonesia during Japanese occupation: Billiton and BPM geologist Pieter M. Roggeveen, BPM geologist 'Pip' Pijpers, NKPM geologist Louis Vermunt and Marsman geologist Dirk Van Eek)

Musper, K.A.F.R. (1937)- Geologie und lagerstattenkundliche Neuigkeiten aus dem Ostindischen Archipel (1. Fortsetzung). Zeitschrift Deutschen Geologische Gesellschaft 89, p. 659-661.
('Geological and mining developments in the East Indies Archipelago, first continuation'. Newsletter)

Musper, K.A.F.R. (1938)- Geologie und lagerstattenkundliche Neuigkeiten aus dem Ostindischen Archipel (Dritte Fortsetzung). Zeitschrift Deutschen Geologische Gesellschaft 90, p. 287- 290, 662-667.
('Geological and mining developments in the East Indies Archipelago, third continuation')

Ng, T.F. (1993)- Bibliography and index publications of the Geological Society of Malaysia 1967-1993. Bull. Geol. Soc. Malaysia 34, p. 1-181.
(online at: www.gsm.org.my/products/702001-100369-PDF.pdf)
(See also continuation as Tate (2007) Bibliography and Index of GSM (1994-2004))

Purbo-Hadiwidjojo, M.M. (1970)- Dokumentasi bidang geologi Indonesia. Direktorat Geologi, Bandung, Spec. Publ. 4, p. 1-17.
('Documentation on the geology of Indonesia'. Brief review of journals and key publications on geology of Indonesia)

Schalker, W.J.P.J. & W.C. Muller (1912)- Repertorium op de literatuur betreffende de Nederlandsche kolonien in Oost- en West-Indie voor zoover zij verspreid is in tijdschriften en periodieken, Derde vervolg (1906-1910). Nijhoff, The Hague, p. 1-271.
(online at: http://archive.org/details/repertoriumopdel07schauoft)
('Third continuation' of bibliography of Netherlands East Indies literature. Geology on p. 23-28)

Scrivenor, J.B. (1947)- Publications of the Mijnbouw in Nederlandsch-Indie. Geol. Magazine 84, p. 114-117.
(Review of four 1939-1940 publications of Bandung geological survey)

SE Asia Research Group, Royal Holloway/ University of London, Egham, U.K.

(Online bibliography of SE Asia geology. Accessible only to industry sponsors of SEARG consortium)

Sepp, D. (1934)- Repertorium op de literatuur betreffende de Nederlandsche kolonien voor zoover zij verspreid is in tijdschriften, periodieken, serie- en mengelwerken, Achtste vervolg (1931-1932). Nijhoff, Den Haag, p. 1-189. *(online at: www02.us.archive.org/stream/repertoriumopdel08schauoft/repertoriumopdel08schauoft_djvu.txt)*
('Eighth continuation' of bibliography of Netherlands colonies literature. p. 20-26 on Netherlands Indies geology)

Sepp, D. (1934)- Repertorium op de literatuur betreffende de Nederlandsche kolonien voor zoover zij verspreid is in tijdschriften, periodieken, serie- en mengelwerken, Zevende vervolg (1926-1930). Nijhoff, Den Haag, p. 1-189.
('Seventh continuation' of bibliography of Netherlands colonies literature. p. 56-72 on Netherlands Indies geology))

Skwarko, S.K. (1970)- Bibliography of the Mesozoic palaeontology of Australia and eastern New Guinea. Australian Bureau Mineral Res. Bull. 108, p. 237-270.
(online at: www.ga.gov.au/)

Skwarko, S.K. & G. Yusuf (1982)- Bibliography of the invertebrate macrofossils of Indonesia (with cross references). Geol. Res. Dev. Centre (GRDC), Bandung, Spec. Publ. 3, p. 1-66.
(Three lists of literature references on invertebrate fossils of Indonesia: Paleozoic (11p.), Mesozoic (11p.) and Cenozoic fossils (10p.), with cross-index tables)

Smoot, K. (1994)- The SEAPEX Reference Index. SE Asia Petrol. Expl. Soc. (SEAPEX), Singapore, p. 1-321.
(Listing and index of papers published by SEAPEX, Singapore: SEAPEX Proceedings 1-10 (1976-1992) and Offshore Southeast Asia conferences 1976-1984)

Steenhuis, J. (1930-1956)- Lijst der proefschriften ter verkrijging van den Doctoralen graad. Jaarboek Geologisch Mijnbouwkundig Genootsch. Nederland en Kol., Bijlage 1930-1956, 4 vols.
(Listing of 423 geological theses written between 1781-1955 by Dutch geologists, including many on geology on Indonesia. Issued in 4 parts: 1- 1930 (1781-1929, 36p.), 2-1939 (1930-1939), 3- 1949 (1940-1949, 41p.), 4-1956 (1950-1955, 25p.))

Steenhuis, J. (1951)- Opgave van geschriften over geologie en mijnbouw van Indonesie 4, 23e vervolg. Verhandelingen Nederl. Geologisch-Mijnbouwkundig Genootschap, 81p.
(23rd and final issue of Indonesia bibliography started by Verbeek in 1914, continued by Wing Easton after 1925. This volume mainly covers period 1937-1947, papers numbered 5960-6700)

Tate, R. (2007)- Bibliography and Index of the GSM Bulletin (1994-2004). Bull. Geol. Soc. Malaysia 50, p. 1-155.
(online at: http://geology.um.edu.my/gsmpublic/v50/Contents%20-%20iii%20to%20165%20.pdf)
(Continuation of Ng (1993) Bibliography and Index of GSM (1967-1993)

Teh, G.H. (1993)- Bibliography and Index. Geological Society of Malaysia, Kuala Lumpur, p. 1-180.

Teves, J.S. (1953)- Bibliography of Philippine geology, mining and mineral resources. Bureau of Mines, Manila, Bibliography Ser. 1, p. 1-155.

Tjia, H.D. (1977)- Geology of Indonesia: publications 1958-1975 and a few earlier publications. Geol. Survey of Indonesia (Direktorat Geologi), Spec. Publ. 5, p. 1-74.

Van Gorsel, J.T. (2009)- A bibliography and brief history of Indonesia geology literature. Proc. 33rd Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, 1, IPA09-G-087, p. 429-460.

(Review paper with attached first edition of this bibliography, with 700p. bibliography on proceedings CD)

Van Gorsel, J.T. (2011)- An updated bibliography of Indonesian geology. Proc. 35th Ann. Conv. Indon. Petroleum Assoc. (IPA), Jakarta, IPA11-G-025, 6p.
(Summary of poster with statistics on 3rd edition of this bibliography)

Van Gorsel, J.T. (2014)- Annotated bibliography of biostratigraphy and paleontology of Indonesia- SE Asia. Berita Sedimentologi 29, Supplement, p. 3-337.
(online at: www.iagi.or.id/fosi))
(Annoted bibliography with >3200 titles of publications on paleontogy/ biostratigraphy of Indonesia and surrounding areas)

Verbeek, R.D.M. (1912)- Opgave van geschriften over geologie en mijnbouw van Nederlandsch Oost-Indie. Verhandelingen Geologisch-Mijnbouwkundig Genootschap Nederland Kol., Geol. Serie 1, p. 31-248.
(Initial volume of bibliography series by Verbeek, listing 2665 titles on geology and mining in and around the Netherlands East Indies until 1912)

Verbeek, R.D.M. (1914-1923)- Opgave van geschriften over geologie en mijnbouw van Nederlandsch Oost-Indie, 1e tot 10e vervolg. Verhandelingen Geologisch-Mijnbouwkundig Genootschap Nederland Kol., Geol. Serie, vols. 1-7.
(10 annual supplements of Verbeek's bibliography, listing papers 2666-3744 on geology and mining in and around the Netherlands East Indies through 1923)

Verbeek, R.D.M. (1924-1925)- Geologisch-mijnbouwkundige bibliographie van Nederlandsch- Indie 3, 11e en 12e vervolg. Verhandelingen Geologisch-Mijnbouwkundig Genootschap Nederland Kol., Geol. Serie,
(Supplements 11 and 12 of Verbeek's bibliography, listing papers 3745- 4062, published in 1924, 1925)

Wing Easton, N. (1926-1933)- Geologisch-mijnbouwkundige bibliographie van Nederlandsch- Indie 3, 13e - 20e vervolg. Verhandelingen Geologisch-Mijnbouwkundig Genootschap Nederland Kol., Geol. Serie xx, p. 45-208.
(Continuation of Verbeek series of 'Netherlands Indies' geology bibliography, supplements 13-20, listing papers nrs. 3745-5518, published between 1926-1933)

Wing Easton, N. (1935-1937)- Geologisch-mijnbouwkundige bibliographie van Nederlandsch- Indie 4, 21e en 22e vervolg. Verhandelingen Geologisch-Mijnbouwkundig Genootschap Nederland Kol., Geol. Serie, p.
(Continuation of Verbeek series of 'Netherlands Indies' geology bibliography, supplements 21-22, listing papers nrs. 5519-5959, published 1935, 1937) (Final volume 23e vervolg by Steenhuis 1951)

Dutch colonial period geological journals

A. Dienst Mijnbouw Nederlands Indie (Netherlands Indies Department of Mines), Bandung

a1. ***Jaarboek van het Mijnwezen in Nederlandsch Oost-Indie*** (Vols. 1-52; 1872-1923)
("Yearbook of the Department of Mines in Netherlands East Indies").
a2. ***Jaarboek van het Mijnwezen in Nederlandsch-Indie*** (Vols. 53-68; 1924- 1939)
("Yearbook of the Department of Mines in Netherlands Indies").
(Published annually in 2 parts: (Technical/administrative and 'Wetenschappelijk' (scientific). From vol. 39 (1910) divided into General part ('Algemeen Gedeelte') and Transactions ('Verhandelingen'). From vol. 26 (1897) also periodically separate Atlas volumes)

(N.B.: Many volumes of the 'Jaarboek' are available online from Google.com, Archive.org or https://catalog.hathitrust.org/Record/007171827, and were also reprinted in 2010 by Nabu Press/ Bibliolife LLC, S. Carolina, USA. Unfortunately the folded plates, which are generally the most valubable parts of the reports, were generally not copied, limiting the value of all these reproduction versions)

b. ***Wetenschappelijke Mededeelingen-*** Dienst Mijnbouw, Bandung (1924- 1940)
('Scientific contributions- Mines department')
- 28 issues; mainly on paleontology topics, 3 volumes on petrography
- continued as Publikasi Keilmuan, vols. 29-33 in 1955-1957 (A. Kraeff (1955), P. Marks (1956, 1957), R. Osberger (1956), F. Laufer (1957), etc.)

c. ***De Mijningenieur*** *('The Mining engineer')*- Dienst Mijnbouw, Bandung (1920-1933; vols. 1-14)
- short papers on mining and geology in Indonesia, issued by 'Vereeniging van Ingenieurs en Geologen bij den Dienst van den Mijnbouw in Nederlandsch-Indie' *(rare!)*

d. ***Vulkanologische Mededeelingen-*** Dienst Mijnbouw, Weltevreden and Bandung (1921-1940)
('Volcanological contributions'- After 1928 named ***Vulkanologische en Seismologische Mededeelingen****)*
(13 monograph issues on active volcanoes of Indonesia)

e. ***Bulletin of the Netherlands Indies Volcanological Survey*** (~1927- 1941)
- issues 1-94 + issues 95-98 by Van Bemmelen during early part of Japanese occupation

f. ***Verslagen en Mededeelingen betreffende Indische delfstoffen en hare toepassingen*** (1917-1940)
('Reports on Indies minerals and their applications') (23 issues)

g. ***Geological maps*** produced before 1941:
- Geological overview maps Netherlands East Indies Archipelago 1: 1,000,000 (1915-1932) (12 of 21 planned sheets published)
- Geologische kaart van Sumatra 1: 200,000 (1927-1937; incomplete series; 13 sheets published)
- Geologische kaart van Java 1: 100,000 (1927-1941 ; incomplete series; 11 sheets published)

B. Other journals with geology papers, published in Indonesia

1. ***Natuurkundig Tijdschrift van Nederlandsch Indie*** (1850- 1940, vols. 1-100), Batavia.
('Journal of Natural Sciences of Netherlands Indies')
- Continued as:
  1a. Natuurwetenschappelijk Tijdschrift van Nederlandsch Indie (1941-1942 and 1946, vols. 101-102)
  1b. Chronica Naturae (1947-1950; vols. 103-106)
  1c. Indonesian Journal for Natural Science/ Madjalah Ilmu Alam untuk Indonesia (1951- 1957; vols. 107-113)
- Natural history journal, and main journal for Indonesia geology papers in late 1800ŝ
- Selected issues digitized and online at: *www.biodiversitylibrary.org/bibliography/13350*
- Chronica Naturae also online at: *http://colonial.library.leiden.edu/...*

2. ***De Mijningenieur*** *('The Mining Engineer')* (1920-1933)
- Published by 'Vereeniging van Ingenieurs en Geologen bij den Dienst van den Mijnbouw in Nederlands Oost-Indie', Bandung;
- Hard to find journal; after 1933 continued as section IV of '*De Ingenieur in Nederlandsch-Indie*'

2b. ***De Ingenieur in Nederlandsch-Indie*** (*'The Engineer in Netherlands Indies'*), 1934-1942.
- continuation of 'De Mijningenieur'
- vols. 1-9 (final issue 9-1, January 1942)
- most issues were available online at: website of Royal Tropical Institute (KIT), Amsterdam, now at: *http://colonialarchitecture.eu/obj?sq=id:jn:15*

2c. ***De Ingenieur in Indonesie*** (*'The Engineer in Indonesia'*), 1948-1957.
- continuation of 'De Ingenieur in Nederlandsch-Indie'
- vols. 1-9 (final issue 9-4, December 1957)
- available online at: *http://koloniaal.library.leiden.edu/...*

C. Journals containing papers on Indonesia geology, published in The Netherlands

1. ***Geologie en Mijnbouw*** *(now: Netherlands Journal of Geoscience)*, Netherlands Geological and Mining Society (KNGMG), Delft, since 1923
   - from 1923-1931 the journal is called *Mijnwezen*
   - most older issues online at: *https://www.kngmg.nl/wp-content/uploads/2018/05/Pre1961.pdf* and at: *https://www.kngmg.nl/wp-content/uploads/2016/03/Index_1961_2004.pdf*

2. ***Verhandelingen Koninklijk Nederlands Geologisch en Mijnbouwkundig Genootschap*** *('Transactions of the Royal Netherlands Geological and Mining Society')*, KNGMG, Delft

3. ***Tijdschrift van het Koninklijk Nederlands Aardrijkskundig Genootschap*** (since 1876) *('Journal of the Royal Netherlands Geographic Society')*
   - many papers on geography and travels in Indonesia, some with geological observations.

4. ***Sammlungen des Geologischen Reichs-Museums in Leiden*** (1881-1924), Leiden Natural History Museum *('Proceedings of the National Geological Museum in Leiden')*
   - mainly collection of paleontological papers on fossils from across 'Netherlands Indies'
   - after 1925 continued as: ôLeidsche Geologische Mededeelingenô and also óScripta Geologicaô
   - all issues available online at: *www.repository.naturalis.nl/*

5. ***Verhandelingen Koninklijke Nederlandse Akademie van Wetenschappen, Amsterdam*** *(Proceedings Royal Netherlands Academy of Sciences)*
   - many of the 1899-1950 papers available for download at *www.digitallibrary.nl* or
   - online at: *www.dwc.knaw.nl/english/academy/digital-library/..*

6. ***Bulletin Maatschappij ter Bevordering van het Natuurkundig Onderzoek der Nederlandsche Kolonien*** *('Society for the promotion of Natural Science exploration of the Netherlands colonies'*)
   - Society founded in 1890, sponsored expeditions to Borneo, New Guinea, etc.
   - Bulletin Issues 3-102, 1891-1913?
   - mainly reports on travels in remote regions of Indonesia, with relatively little on geology.

7. ***Nova Guinea.*** **Uitkomsten der Nederlandsche Nieuw-Guinea-Expeditie(s) in 1903 (1907, 1909, 1912, 1913 en 1920)** *('Nova Guinea. Results of the Netherlands New Guinea expeditions...'*)
   - Journal series documenting ethnological, biological and geological results of New Guinea expeditions of 1903, 1907, 1909, 1912-1913, 1920, 1926.
   - published by E.J. Brill, Leiden
   - Series 1: Volumes 1-18 (1909-1936)
   - New series: volumes 1-10 (1937-1967) (>90% of papers on biology)

8. ***Jaarboek van de Mijnbouwkundige Vereeniging te Delft (1903-1949)***. (*'Yearbook of the Mining students organization, Technical University, Delft'*)
   - Delft mining engineering students yearbooks, which include presentations on Indonesia geology and personnel movement (the majority of geologists- mining engineers in the Netherlands Indies came from Delft)
   - *online at: https://tresor.tudelft.nl/tijdschrift/jaarboeken/*

D. Other Journals/ Publication series of interest to Indonesia SE Asia geology

Geology and Palaeontology of Southeast Asia **(**1964-1984)

- Significant series of 25 books on paleontology of SE Asia, published by University of Tokyo Press; edited by T. Kobayashi or T. Kobayashi and R. Toriyama;
- Results of research by Japanese geologists and paleontologists, organized in research group Association for Paleontological Research in Southeast Asia (APRSA);
- Total of 297 papers, ~80% on paleontology-biostratigraphy topics, spanning fossils from Cambrian-Quaternary age, mainly from Thailand, Malaysia, Indonesia, Philippines;
- First two volumes reprints of papers from other journals, subsequent volumes original contributions
- Volume 15 (1975): interim summary of APRSA activities
- Volume 17 (1976): Special problems of Late Paleozoic
- Volume 21 (1980): Proceedings of Symposium on geology and Palaeontology of Southeast Asia, Tsukuba 1978
- Volume 25 (1984) with 22 useful review papers summarizing knowledge of fossil groups in SE Asia.

- Warta Geologi (Newsletter Geological Society of Malaysia), 1975-now. (1975-2017 issues online at: *https://gsmpubl.wordpress.com/category/warta-geologi/* or at: *https://gsmpubl.wordpress.com/2014/09/15/warta-geologi/)*

GEOLOGICAL SURVEY INDONESIA (Center of Geological Survey(CGS), Bandung

Jl. Diponegoro 57, Bandung 40122
(several name changes; formerly Dienst Mijnwezen Nederlands Indie, Geological Survey of Indonesia, Geological Research and Development Centre (GRDC), Pusat Survei Geologi (PSG), etc.)
- Website: *www.bgl.esdm.go.id/*
(online papers by author at: *www.bgl.esdm.go.id/publication/index.php/dir/author*)
- Geological Museum website: *http://museum.bgl.esdm.go.id/*
- Geological map series Indonesia 1:250,000 and 1: 1,000,000; Java also 1:100,000 scale

Publications (some of more recent journals online at: *www.bgl.esdm.go.id/dmdocuments*):
- GRDC Special Publications 1-38 (1978-2009)
- Bulletin Geological Research and Development Centre (vols. 1-21; 1979-1997)
- GRDC Paleontology Series and Geophysical Series (vols. 1-10; 1981- 1999)
- Jurnal Geologi Indonesia (Indonesian Journal of Geology) (JGI; vols. 1-8, 2006-2013)
(online at: www.bgl.esdm.go.id/publication/index.php/dir/publisher_detail/4)
continued as Indonesian Journal on Geoscience (IJOG; vols. 1-5, 2014-2018)
(online at: https://ijog.geologi.esdm.go.id/index.php/IJOG/issue/archive)
- Jurnal Geologi dan Sumberdaya Mineral/ J. Sumber Daya Geologi (J. Geol. Mineral Res.) (1991- 2018)
(online at: http://jgsm.geologi.esdm.go.id/index.php/JGSM/issue/archive)
- Buletin Sumber Daya Geologi (vols. 1-13, 2006-2018)
(vols. 1- 13/1 online at: http://buletinsdg.geologi.esdm.go.id/index.php/bsdg/issue/archive)
- Warta Geologi (2006-2010; popular geology magazine; same name as GSM-Malaysian magazine)
(vols. 1-5 online at: http://www.bgl.esdm.go.id/index.php/koleksi-warta-geologi)
- GEOMAGZ Majalah Geologi Populer (continuation of Warta Geologi)
Popular geology journal, since 2011; published by Badan Geologi, Bandung
(online at: http://geomagz.geologi.esdm.go.id/category/s15-egeomagz/c86-egeomagz/)
- Publikasi Ilmiah Pendidikan dan Pelatihan Geologi (vols. 1- 12? (2016))
('Scientific Publication for Education and Geology Training')

GEOSCIENCE AUSTRALIA (GA), Canberra, Australia
- Formerly Australian Bureau of Mineral Resources (BMR), Australian Geological Survey Organization (AGSO), etc.
- Website: *www.ga.gov.au*
- Extensive online data bases on Australian wells data, well logs, reports, etc.
- Publications and Data search tool at: *https://ecat.ga.gov.au/geonetwork/srv/eng/search*
BMR Journal of Australian Geology and Geophysics (1976-1992), AGSO J. Australian Geology and Geophysics (1993-2000) (*online at: www.ga.gov.au/data-pubs/library/legacy-publications/journals*)
Bulletin Bureau Mineral Resources (1932-2001)
Numerous unpublished Reports, Records.

HASANUDDIN UNIVERSITY (UNHAS), Makassar, Sulawesi
- Website: *http://repository.unhas.ac.id/*
- Jurnal Penelitian Geosains (Teknik Geologi Universitas Hasanuddin), vols. 1 (2004?)- now
- International Journal of Engineering and Science Applications (IJEScA, vols. 1-4 (2014-2017)
(online at: *http://pasca.unhas.ac.id/ojs/index.php/ijesca/issue/archive*)

INDONESIAN GEOLOGISTS ASSOCIATION (IAGI) (Ikatan Ahli Geologi Indonesia), Jakarta
- Website: *www.iagi.or.id/* (restricted access)
- Proceedings of Annual IAGI Conventions (ôPertemuan Ilmiah Tahunan xx IAGIö), since 1971
(Titles/abstracts of years 2006-2013 online at: *www.iagi.or.id/paper*; volumes generally hard to find or buy)
- Newsletters: Warta IAGI, Berita IAGI
- Journals: Geologi Indonesia (since 20xx: Majalah Geologi Indonesia; since ~1974?, MGI)
- Special publications (no listings or purchasing information online).

INDONESIAN ASSOCIATION OF GEOPHYSICISTS (Himpunan Ahli Geofisika Indonesia; HAGI),

Jakarta
- Website: *www.hagi.or.id/*
- Proceedings of Annual Conventions since 1973 *(hard to find)*
- Jurnal Geofisika

INDONESIAN ASSOCIATION OF SEDIMENTOLOGISTS (FOSI), Jakarta
- Website: *www.iagi.or.id/fosi/*
- Berita Sedimentologi (Indonesian Journal of Sedimentary Geology), vols. 1-40 (1996-2018) (volumes 20-40 online at: *www.iagi.or.id/fosi/*)
- LinkedIn page at *www.linkedin.com*

INDONESIAN PETROLEUM ASSOCIATION (IPA), Jakarta
- Website: *www.ipa.or.id*
- Proceedings of Annual IPA Conventions since 1972 (online at AAPG Datapages; subscription required)
- Special Publications (Atlas of oil and gas fields, geothermal gradient map, etc.)
- Fieldtrip Guidebooks, short courses, etc.

INDONESIAN SOCIETY OF ECONOMIC GEOLOGISTS (MGEI), (Masyarakat Geologi Ekonomi Indonesia), Jakarta
- Subdivision of IAGI, with separate Annual conventions since 2009.
- Website: *http://mgei-iagi.org/*

INDONESIAN INSTITUTE OF SCIENCES (LIPI), Research Center for Geotechnology, Bandung
- Formerly Lembaga Geologi dan Pertambangan Nasional (National Institute of Geology and Mining)
- Website: *www.geotek.lipi.go.id*
- Online Indonesian Scientific Journal Database: *http://isjd.pdii.lipi.go.id/*
- Bulletin of National Institute of Geology and Mining Bandung (vols. 1-5, 1968-1975) (online at: *http://pustaka.geotek.lipi.go.id/index.php/category/jurnal/nigm/*)
- Journal RISET Geologi dan Pertambangan (Indonesian Journal of Geology and Mining)
  (vols. 1-10 (1977-1991) online at: *http://pustaka.geotek.lipi.go.id/index.php/category/jurnal/riset/)*
  (vols. 15-27 (2005-2017) online at: *http://jrisetgeotam.com/index.php/jrisgeotam/issue/archive*)
- Proceedings Annual Geoteknologi Research Conferences
  (1995-1996 and 2006-2016 online at: *http://pustaka.geotek.lipi.go.id/index.php/category/prosiding/*)

INSTITUTE TECHNOLOGY, BANDUNG (ITB), Bandung
- Library website: *http://digilib.batan.go.id/;* restricted access*; also at: http://isisnetwork.lib.itb.ac.id/)*
- Buletin Geologi, ITB (vols. 1 (1980)- 42 (2015))
  (initially as Buletin Dept. Teknik Geologi ITB/ Jurusan Geologi ITB (= Bull. Geology Dept. ITB))
- Bulletin of Geology, vols. 1-2 (2017-2018)
  (online at: *http://buletingeologi.com/index.php/buletin-geologi/issue/archive*)
- Jurnal Teknologi Mineral (JTM) (Journal of Mineral Technology, ITB) (1994-)
  (abstracts 1994-2007 online at: *www.fttm.itb.ac.id/jtm/index.php)*
  (2009-2012 volumes online at: *http://idci.dikti.go.id/pdf/JURNAL/JTM/)*
- ITB Journal of Mathematical and Fundamental Sciences (1961- now)
  (previously known as: ITB Journal of Science (2008-2012), Proc. ITB Science and Technology (2003-2007), Proceedings ITB (1961-2002) (includes some geology papers; online at: *http://journal.itb.ac.id/)*

INSTITUT SAINS & TEKNOLOGY AKPRIND, Yogyakarta
- Jurusan Teknik Geologi website: *https://geologi.akprind.ac.id/*
- Jurnal Technoscientia (vols. 1-11, 2008-2018)
  (some issues online at: *https://journal.akprind.ac.id/index.php/technoscientia/issue/archive*)

LEMIGAS (Pusat Penelitian dan Pengembangan Teknologi Minyak dan Gas Bumi), Jakarta
(formerly Lembaga Minyak dan Gas Bumi; R&D Centre for Oil and Gas Technology)

- Website: *www.lemigas.esdm.go.id*
  (Lemigas website(s) changed frequently and tends to function very poorly; HvG 6/2018)
- LEMIGAS Scientific Contributions (Oil and Gas), vols. 1 (1977)- 40 (2017)
  (selected recent issues online at: *http://www.journal.lemigas.esdm.go.id/ojs/*)
- Lembaran Publikasi Minyak dan Gas Bumi, vols. 7 (1973)- 51 (2017)
  (selected issues online at: *www.lemigas.esdm.go.id/publikasi/read/lembar/1/* or
  www.journal.lemigas.esdm.go.id/index.php/LPMGB/issue/archive?issuesPage=1issues)

MARINE GEOLOGICAL INSTITUTE OF INDONESIA (Puslitbang Geologi Kelautan), Bandung
- Website: *www.mgi.esdm.go.id*
- Bulletin of the Marine Geological Institute of Indonesia (1985- 1996?)
- Jurnal Geologi Kelautan (2003-2017)
  (online at: *http://ejournal.mgi.esdm.go.id/index.php/jgk/issue/archive?issuesPage=1issues*)
- Bulletin of the Marine Geology (1997-2017)
  (vols. 22-32 online at: *http://ejournal.mgi.esdm.go.id/index.php/bomg/issue/archive)*

NATURALIS BIODIVERSITY CENTER (National Museum of Natural History), Leiden, Netherlands
- Long history of collection and study of fossil and modern fauna and flora in Indonesia
- Main publication series since late 1800's: Sammlungen Geol. Reichsmuseum Leiden, Scripta Geologica, Leidsche Geologische Mededelingen, Zoologische Verhandelingen.
- Most publications online at: *www.repository.naturalis.nl/*

OCEAN DRILLING PROGRAM (IODP), College Station, Tx, USA
- Information on worldwide deep sea drilling programs (but none in Indonesian deep waters!)
- Website *www-odp.tamu.edu/*
- Deep Sea Drilling Reports (DSDP) Volumes 1-96 (1968- 1985)
- Ocean Drilling Program (ODP) Legs 100-210 (1985- 2003)
- Integrated Ocean Drilling Program (IODP) Legs 301-321 (2003- now)

PADJADJARAN UNIVERSITY (UNPAD), Bandung
- Bulletin of Scientific Contribution, vols. 1-16 (2003-2018)
  (most papers of volumes 3-16 online at: http://jurnal.unpad.ac.id/bsc/issue/archive)
- Journal of Geological Sciences and Applied Geology (2016-)
  (volume 2 online at: http://jurnal.unpad.ac.id/gsag/issue/archive)

PETROLEUM EXPLORATION SOCIETY OF AUSTRALIA (PESA)
- PESA journal available through AAPG Datapages (since 2017; subscription)

THE PETROLEUM GEOLOGY OF SE ASIA (PGSEA)
- Website: *www.pgsea.com*
- Short course on SE Asia petroleum geology by Ian Longley (formerly with Dick Murphy)
- Data packages of SE Asia geolocated images, cross-sections, etc. (for sale)

PT PATRANUSA DATA (PND), Jakarta
- Official government supplier of Indonesia well and seismic data for oil and gas industry
- Website: *www. www.patranusa.com/*
- Inameta Journal (information on bid rounds, tender blocks, etc.) (vols. 1-8 online)

PUSAT TEKNOLOGI BAHAN GALIAN NUKLIR (BATAN), Jakarta
- Technology Center for Nuclear Minerals
- Journal: EKSPLORIUM- Buletin Pusat Teknologi Bahan Galian Nuklir
  (2011-2017 issues online at: *http://jurnal.batan.go.id/index.php/eksplorium/issue/archive)*

SOCIETY OF INDONESIAN PETROLEUM ENGINEERS (IATMI; Ikatan Ahli Teknik Perminyakan Indonesia), Jakarta
- Website: *https://iatmi.or.id/*
- Journal: Jurnal Teknologi Minyak dan Gas Bumi (2009?- now)
  (some issues online at: *www.iatmi.or.id/assets/bulletin/pdf/JTMGB/*)

SOUTHEAST ASIA PETROLEUM EXPLORATION SOCIETY (SEAPEX), Singapore
- Website: *www.seapex.org*
- Offshore SE Asia Conferences every second year since 1973
  - 1976-1994 SEAPEX proceedings online at: *www.seapex.org/press-list.php* (members only)
..- 1974-2017 proceedings online through AAPG Datapages paid subscription
  (online at: *http://archives.datapages.com/data/browse/southeast-asia-petroleum-exploration-society-seapex/)*
- Special Publications, Short courses
- ōSEAPEX Pressô quarterly newsletter.

SE ASIA RESEARCH GROUP (SEARG), ROYAL HOLLOWAY, University of London, Egham, UK.
- Industry-sponsored academic research group, active since 1970's
- Website (with selected downloadable publications): *http://searg.rhul.ac.uk/*

SEKOLAH TINGGI NASIONAL (STTNAS), Yogyakarta
- Prosiding Seminar Nasional RETII
  (seminars 8 (2013)- 12 (2017) online at: https://journal.sttnas.ac.id/ReTII/issue/archive)

TRISAKTI UNIVERSITY, Jakarta
- Bulletin Ilmiah Mineral dan Energi (MINDAGI) (since 2007)
  (few issues online at: *http://www.trijurnal.lemlit.trisakti.ac.id/index.php/mindagi/issue/archive)*
- Jurnal Ilmiah Teknik Perminyakan

UNIVERSITAS ISLAM RIAU, Dept. Geological Engineering, Pekanbaru
- Journal of Geoscience, Engineering, Environment and Technology (JGEET) (since 2016)
  (online at: http://journal.uir.ac.id/index.php/JGEET/issue/archive)

UNIVERSITI KEBANGSAAN MALASIA (National University of Malaysia), Kuala Lumpur
- Sains Malaysiana (vols. 1-46, 1971-2017; general science journal with occasional geology papers)
  (2010-2017 issues online at: *www.ukm.my/jsm/contents.html*)

UPN 'VETERAN' UNIVERSITY, Yogyakarta
- Jurnal Ilmiah Magister Teknik Geologi (MTG), 2008- 2015
  (vols. 1-8 online at: *www.trijurnal.lemlit.trisakti.ac.id/index.php/petro/issue/archive)*
- Jurnal Mineral Energi dan Lingkungan (vol. 1, 2017-)
  (online at: *http://jurnal.upnyk.ac.id/index.php/JMEL/issue/archive)*
- Repository of geological thesis summaries: *http://eprints.upnyk.ac.id/view/subjects/QE.html*

U.S. GEOLOGICAL SURVEY (USGS), Denver, etc., USA
- Includes petreum system studies on selected Indonesian basins
- Website: *http://energy.cr.usgs.gov/oilgas/...*

2. Other Websites of Interest

Archive.org (Website: *www.archive.org)*
Digital library of older, non-copyrighted books and journals (including some issues of ōJaarboek van het Mijnwezen', 'Natuurkundig Tijdschrift voor Nederlandsch Indieö, Sarasin Sulawesi books, Junghuhn Java book, etc.) *(unfortunately generally scanned without foldout maps, often the most useful items!)*

Biodiversity Heritage Library (BHL)
Digital library of older, non-copyrighted books and journals
- including many issues of Natuurkundig Tijdschrift voor Nederlandsch Indieô (1851-1922)
  (online at: https://www.biodiversitylibrary.org/bibliography/13350/summary)

DMR (Department of Mineral Resources) Library, Bangkok
- Numerous publications on geology of Thailand can be searched and downloaded from DMR Web Gateway at *www.dmr.go.th/main.php?filename=Library2015___EN*
- Website with additional geological information: *www.dmr.go.th/main.php?filename=web_en*

Elsevier Publishing Co, Amsterdam
Geoscience journals online for subscribers at: *www.sciencedirect.com*
- Journal Southeast Asian Earth Sciences 1986-1996, Journal of Asian Earth Sciences 1997- now
- Also: Tectonophysics, Earth Science Reviews, Palaeogeography, Palaeoecology, Palaeoclimatology, Marine Micropaleontology, Marine Geology, Sedimentary Geology, etc.,

Google Books
Many of the older, non-copyright-protected books/ journals are in the Google digitized books collection (unfortunately maps and foldout figures/ tables generally not copied)
- website: *www.google.com/books*

Japan Science and Technology Agency
- Many geology papers published in Japan are available online here
- Website: *www.journalarchive.jst.go.jp/archivesearch*

KITLV- Koninklijk Instituut voor Taal, Land en Volkenkunde (Royal Netherlands Institute of Southeast Asian and Caribbean Studies), Leiden, Netherlands.
- Website: *www.kitlv.nl*

Royal Netherlands Geographic Society (Kon. Nederlands Aardrijkskundig Genootschap/ KNAG)
- Journal (ôTijdschrift KNAGö) most issues online at *www.delpher.nl/*)
- Information on expeditions sponsored to Central Sumatra (1979) and New Guinea (1939, 1959)
- Website: *www.knag-expedities.nl/pages/expedities.php*

Royal Tropical Institute (KIT), Amsterdam ('Tropenmuseum')
- Dutch colonial historic maps, photos, etc. *(much of this was closed in ~2013 due to budget cuts)*
- Website: *www.kit.nl*

Seismic Atlas of SW Asian Basins
Website co-ordinated by Herman Darman; a collection of non-proprietary seismic lines across SE Asia basins
- website: *http://geoseismic-seasia.blogspot.com*

University of Texas Library
- Downloadable US Army 1954 1:250,000 scale topographic maps of Indonesia
- Website: *www.lib.utexas.edu/maps/indonesia.html*

VSA- Virtual Seismic Atlas
Library of seismic lines across globe, with some (older) examples from Indonesia
- Website: *http://see-atlas.leeds.ac.uk:8080/search?s=indonesia*
